Part 1

Getting to know the system

What AGRON Workspace is, what it is made of and where everything is.

01 About the system and this document

02 Map of the system

03 What Workspace is and how it is built

04 The interface: where everything is

Chapter 1

About the system and this document

AGRON Workspace is the internal system of AGRON Inc. where the company runs all of its work: StarDome sales and projects, builds and procurement, compliance and export control, finance, service of installed units, marketing, legal matters and people. Everything is connected in one chain of records: a lead becomes a deal, a deal becomes a proposal and a project, and a project becomes a build, purchases, shipping, installation, acceptance, invoices and service.

Helpers work on top of the records: **agents** check deadlines, money and risks every working day and prepare actions; **AI** answers questions about documents and carries out commands written in plain words; the **translator** keeps every record in four languages; **notifications** arrive by email and on the phone. Nothing important happens on its own: a signature, a payment, a publication or a letter to an outside address always waits for a person's decision.

This document describes the whole system — from the first sign-in to the owner's settings. It is built from the same handbook that lives inside Workspace (FAQ & Learning Center → "How it works") and adds a map of the system, the end-to-end process, a reference for every section and checklists.

10 departments

125 sections

4 languages: EN, RU, UK, AR

15 roles

14 agents

6 StarDome models

How to read this document

Part 1
what the system is and how it is organised; the map and the interface.

Part 2
quick start: the first day and the working rhythm of each role.

Part 3
the StarDome end-to-end process: from the first contact to service, step by step.

Part 4
how it works: detailed chapters on every mechanism of the system.

Part 5
reference: all departments and sections, statuses, fields and access.

Part 6
roles, access, approvals and status gates.

Part 7
terms and answers to frequent questions.

Appendix
the launch checklist and the everyday rules.

Button and section names are given exactly as they appear in the English interface. Record statuses are written in English in every language (for example *Won*, *Approved*, *Shipping*) so the whole international team reads them the same way.

Chapter 2

Map of the system

The StarDome end-to-end process runs left to right; below it are the layers that work for every step.

1 **Lead**

2 **Deal**

3 **Proposal**

4 **Project**

5 **Build and purchasing**

6 **Compliance**

7 **Shipping**

8 **Installation and acceptance**

9 **Invoices and payment**

10 **Service**

Decisions
approvals, checks, one-tap answers

Agents
check deadlines, money and risks every day

AI
questions, commands, reading documents and photos

Languages
every record in EN, RU, UK, AR

Notifications
email, phone, digests

Reports
KPIs, dashboards, PDF packs

One database of records · role-based access · "US persons only" data · change history · backups

Departments

Technical
Sections: 17

Equipment · R&D · Software development · Equipment integration · Tests & trials · Certification · Technical documentation · Systems & monitoring · Engineering metrics · IT & infrastructure · Bill of materials (earlier list) · Engineering changes · Products · Product configurations · Item master · BOM revisions · Test procedures

Operations
Sections: 15

Build units · Work orders · Purchase requests · Quotations · Procurement · Receiving · Vendors & suppliers · Inventory & serials (earlier list) · Logistics & customs · Installation & commissioning · Service & support · Announcements · Quality control & NCR · Installed base & SLA · Operations metrics

Finance
Sections: 11

Budget · Expenses & approvals · Invoices & payments · Payment requests · Container costing · Leasing & financing · Investors & rounds · Tax & reporting · Cash-flow forecast · Insurance · Monthly financials

Sales
Sections: 9

Opportunities · Clients · Proposals & quotes · Partners & distributors · Calls, notes & emails · Introductions & referrals · Tenders & RFPs · Price list · Sales metrics

Marketing
Sections: 16

Channels & accounts · Channel statistics · Plan & budget · Brand center · Social media · Press & publications · Interviews & podcasts · Media & podcast list · Video · Presentations & sales kit · Advertising & campaigns · Events & speaking · Leads · Agencies & freelancers · Websites · Competitors & market

Security
Sections: 8

Technology control plan · Access reviews · Cybersecurity · Facilities & sites · Incidents · Restricted-party screening · Audits & compliance programme · Security metrics

Legal & compliance

Sections: 21

Legal desks (AI) · Legal requests · Equipment compliance matrix · Critical issues · Contracts · Contract obligations · Entities & filings · Trademarks · Regulators · Licences & permits · Disputes & claims · Compliance calendar · Compliance programmes & policies · Board meetings · Directors, officers & stockholders · Signing authority & powers of attorney · Resolutions & consents · Software, copyright & licences · Data protection register · Safety & environmental permits · Legal metrics

HR

Sections: 12

Team & org chart · Hiring · Onboarding · Training & certificates · Policies · Time off · Performance & goals · Company equipment issued · Candidates · Compensation · Offboarding · People metrics

Knowledge base

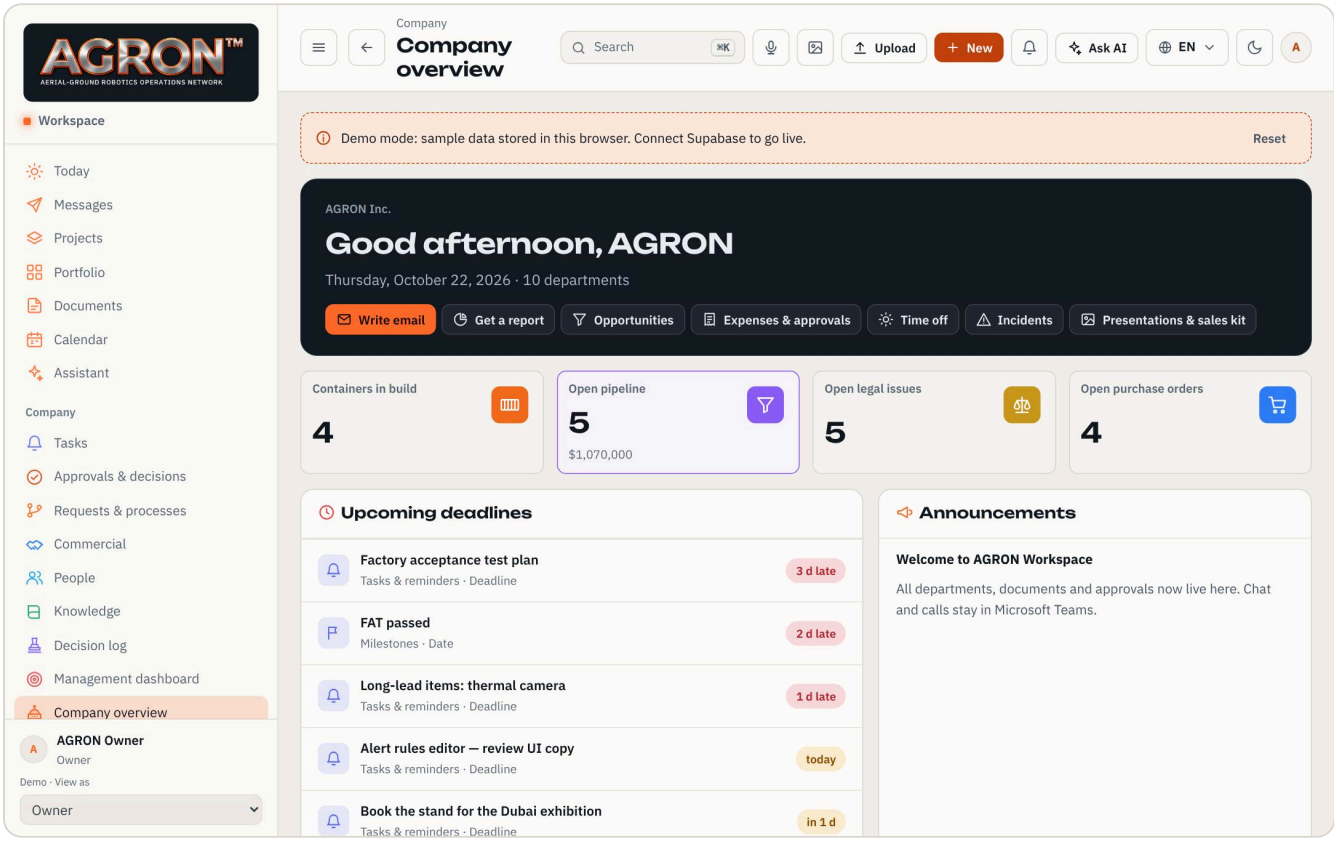

Sections: 14

Tasks & reminders · Portfolios and programs · Projects · Milestones · Document register · Knowledge base · Requests · Issues · Travel & event requests · Party directory · Contacts · Meetings · Company announcements · Decision log

Mail center

Sections: 2

Email templates · Sent emails

Company overview — the first page after signing in

StarDome models: C20 Base, C20 Enhanced, C40 Base, C40 Advanced, C40 HQ, Sprinter (the mobile version on a Mercedes-Benz Sprinter van); plus *Custom* for non-standard solutions.

Chapter 3

What Workspace is and how it is built

AGRON Workspace is the single place where the company keeps its work: deals, builds, documents, people, money, compliance and marketing. Everything else — email, AI, reports, agents — is built around the same records.

How it is organised

- **Departments** (Technical, Operations, Finance, Sales, Marketing, Security, Legal, HR, Company) are in the left menu.
- Each department has an **Overview** (numbers, charts, what its agent noticed, portals, report) and **sections** — for example Sales → Deals pipeline.
- A section is a list of **records**. A record has a title, a **status** (where it is in its process), **fields**, **files**, **comments** and a **history** of every change.

Where the data lives

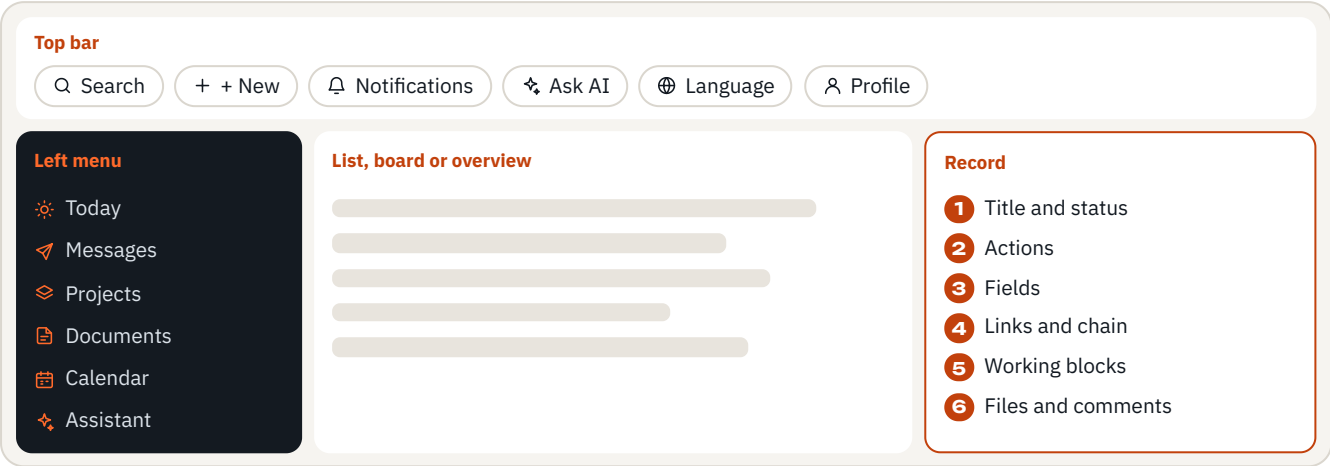

- Records and files are stored in a private database in the USA (Supabase). Files are never public: every download link is personal and expires.
- What each person sees is decided by the database itself, not by the screen: a role that has no access to a section cannot read it even with a direct link.

What makes it work by itself

- **Rules and agents** watch the records every working day and on every save: they remind, escalate, prepare the next record and draft letters.
- Anything that changes the outside world (an email to a client, a new record from email) waits for one click of approval unless you switch it to automatic.

Chapter 4

The interface: where everything is

The screen has four zones; a record opens on the side, over the list.

Top bar (on every page):

- **Search** (⌘K / Ctrl+K) — records, sections, pages and commands; the microphone next to it searches by voice.
- **Camera** — "Photo → record": a receipt becomes an expense, a business card a lead, a delivery note marks the purchase order received.
- **Upload** — smart upload of any document: AI proposes the section and fills the fields, you check and save.
- **Bell** — approvals, my deadlines, mentions and company-wide overdue items.
- **Ask AI** — questions about the data and commands ("create a task...", "move the deal to Proposal...").
- **Language** (EN, RU, UK, AR) and **theme** (light / dark).

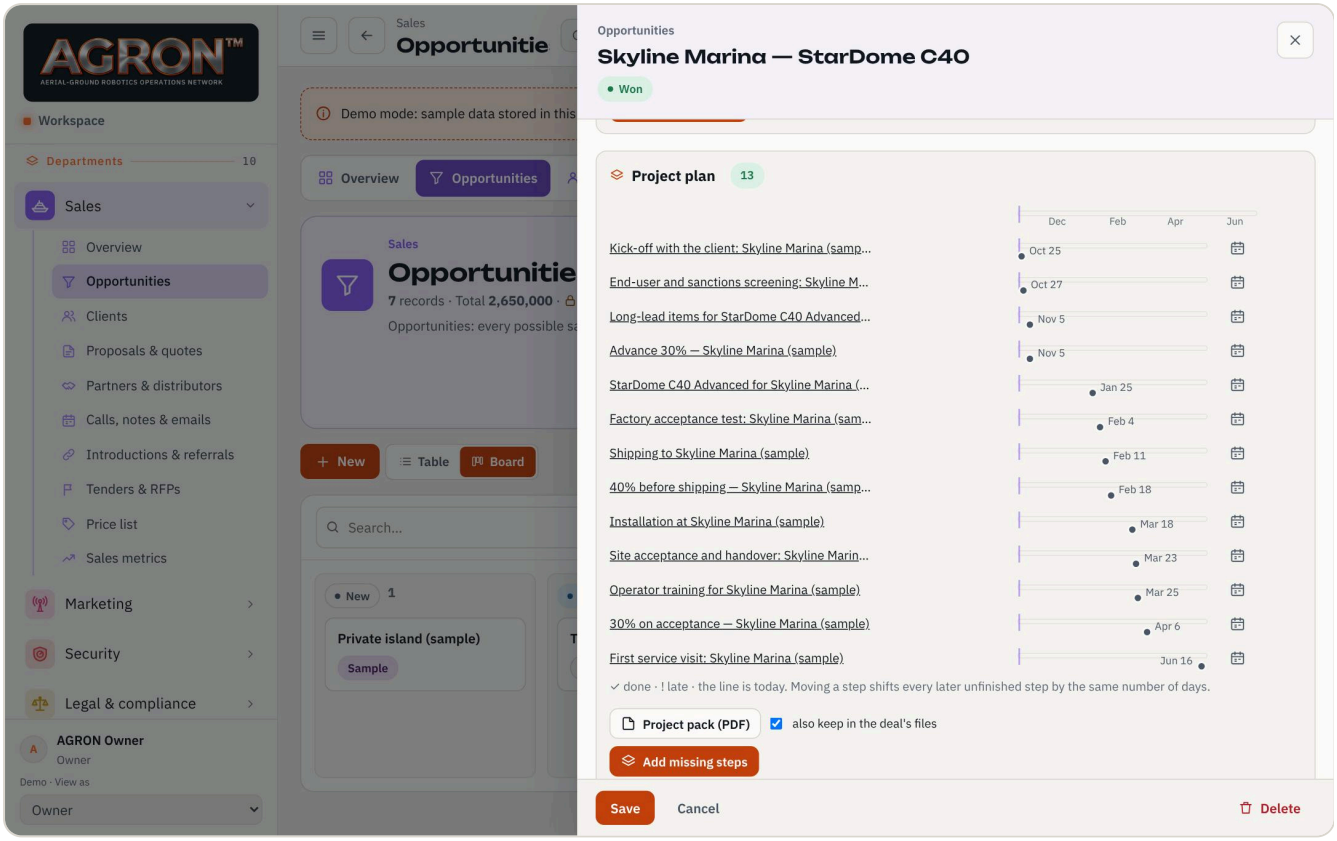

Left menu:

- **Company overview** — the key numbers, upcoming deadlines, announcements, quick actions.
- **My day** — what needs me today: approvals, my deadlines, tasks, mentions.
- **Decisions** — everything that waits for my yes or no, with checks and a one-tap answer.
- **StarDome configurations** — the five containers and the mobile Sprinter: readiness, blockers and documents for each model.
- **Projects** — the portfolio with a traffic light, team workload, "What if" scenarios.
- **Ask documents** — AI answers from uploaded files with links to the source.
- **Reports**, **Templates**, **Tasks & reminders**, **FAQ & Learning Center**, **Recycle bin** (30 days).
- **Departments** — each has an **Overview** (KPIs, charts, what its agent noticed, report) and sections.
- **Administration** (owner and administrator) — users, roles and access, system.

A record opens on the right, over the list:

- header — title and status; action bar: *Copy, Print, PDF, Share, Download, Email, Duplicate, Ask AI*;
- the section's fields; links (deal, build, client...) — each opens the linked record, and below them the whole chain from lead to service;
- working blocks that depend on the section: approval and checks, proposal, project plan and timeline, project money, build parts, request SLA, service and warranty, vendor performance, collection;
- files, comments with @mentions and the history of every change;

- at the bottom — *Save*, *Cancel*, *Delete* (the record goes to the recycle bin for 30 days).

A deal: links, proposal, project plan and timeline

Part 2

Quick start

The first day and the working rhythm of each role.

01 Your first day: sign in, profile, My day

02 A working day by role

03 The system rhythm: what happens and when

Chapter 5

Your first day: sign in, profile, My day

Sign in

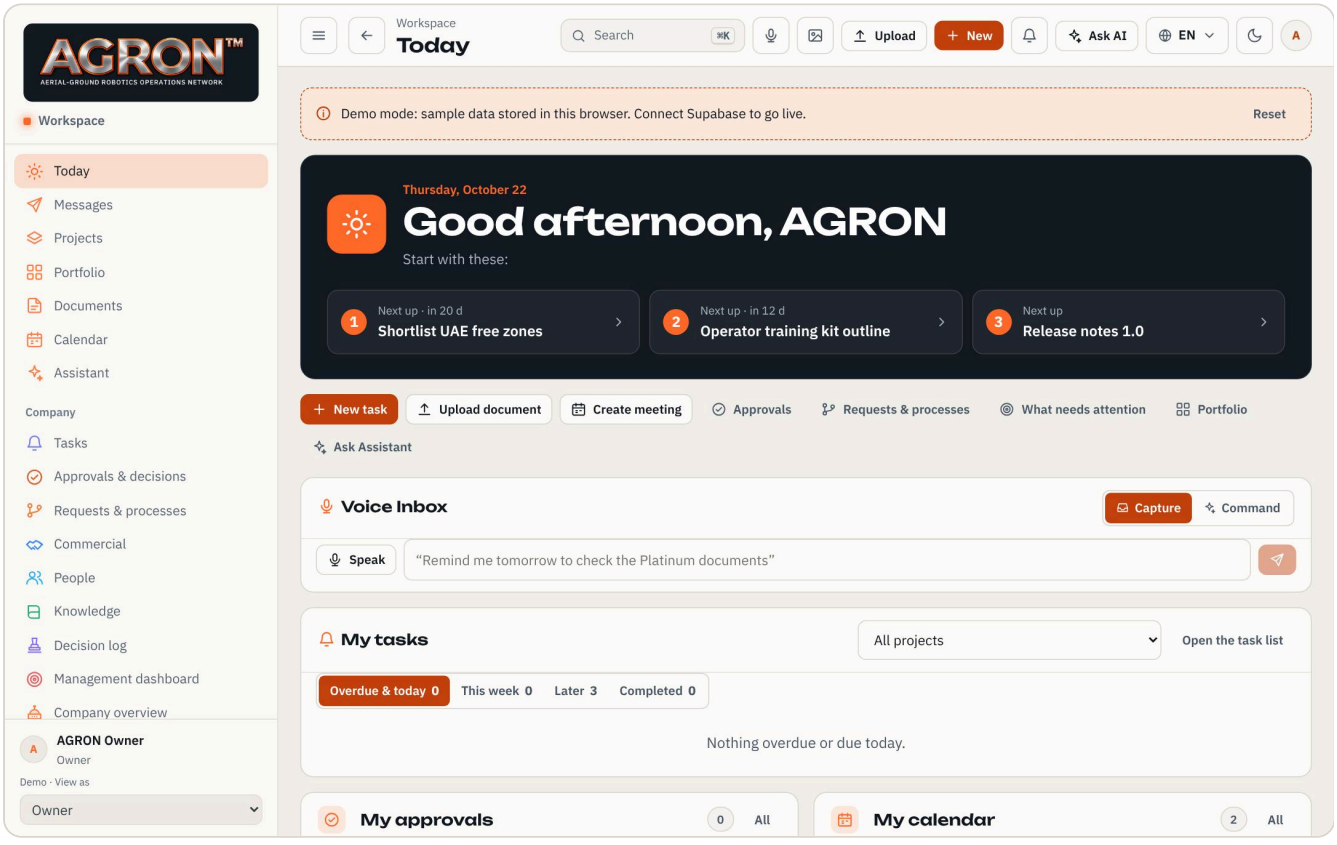

1. Open workspace.agron1.com and sign in with your work email (Google or the link/password you received). New people get a role from an owner or administrator; until then the account is “pending”.
2. If you forget the password, use “Forgot password” on the sign-in page — a reset link comes by email.

Set up your profile (top-right menu → My profile)

- Language (English, Russian, Ukrainian, Arabic — Arabic switches the whole interface right-to-left), theme (light/dark), job title and phone.
- **Deadlines in my calendar**: one private link adds your deadlines to Google, Apple or Outlook calendar. Anyone with the link sees your deadlines — create a new link if it leaks.
- **Install the app**: on a phone or computer Workspace can be installed like an app (icon on the home screen, opens full-screen).

Start every day in Today (the first screen after sign-in)

- At the top: the **three most urgent things** — overdue work, decisions waiting for you, what is due today.
- Below: your tasks by *Overdue & today / This week / Later / Completed* (change the status right there), your approvals, today's meetings and deadlines, new notifications and your projects.
- Every morning at about 8:00 your time you also get the same list by email (it can be switched off in System → Settings).

"My day" — everything that needs you today

Chapter 6

A working day by role

Owner and management

Morning. "Decisions": approvals with checks, agent proposals, invoices ready to send, projects at risk — a one-tap answer. Then "My day" and the digest email at 8:00 your time.

Week. "Projects" → "Portfolio" (traffic light and reasons), "Team workload" (who is overloaded), "Finance" → "Overview" (cash for 90 days, receivables, DSO), "Sales" → "Overview" → "Sales analytics" (the quarter forecast against the target). The Monday brief arrives by email.

Before a decision. "Projects" → "What if": how a project slip or a late client payment changes cash and dates.

Settings. "System" → "Settings": working days, thresholds, approval limits, sales target, AI budget, languages; "Automation" — agent modes.

Sales

Every day. "Deals pipeline" (board): move deals through the stages and set the *expected close date* — without it a deal is not in the forecast. New leads come from "Marketing" → "Leads" and from business cards via the camera.

Deal. "Make a proposal" → a branded PDF with a number; a discount above 15% and a price below costing are highlighted at approval. *Won* is only possible after sanctions screening is *Cleared*.

After the win. "Unfold the project" → a plan with dates and owners, invoices by milestone; in the client card — "Client portal": a personal link where the client sees the status of their units and leaves service requests.

Loss. Fill in "Why lost" — the analytics need it.

Operations

Projects. The timeline in the deal: moving a step moves every later one. A build shows "Parts for this build": reserve from stock and draft orders for the shortage.

Purchasing. An order above the limit goes for approval; on receipt — status *Received*, quantity and rejects (or a photo of the delivery note). Vendor performance is shown in every order.

Shipping. A build cannot go to *Shipping* and a shipment cannot be in transit without the export check, the deal screening and the end-user certificate.

Service. Requests with SLA deadlines, planned service by service plan, warranty and a service-contract offer. On site without a connection the work is kept on the phone.

Finance

Overview. Cash for 90 days, the cash gap, receivables and payables by age, DSO, top overdue clients, margin by configuration.

Milestone invoices are created from the project and become ready after FAT and SAT — check them and send to the client, then set *Sent*. Client reminders (7, 21, 45 days) are prepared in the client's language and wait for approval.

Expenses and purchases above the limit — only after approval; "Decisions" shows duplicates and department budget overruns.

Project money in every won deal: costs against costing and the expected margin.

Engineering

StarDome configurations — readiness of each model by area: equipment, bill of materials (BOM), documentation, integration, testing, certification, changes.

The BOM per configuration is the basis for stock reservation and costing. Engineering changes (ECR) with impact and priority; FAT and SAT in "Quality".

Technical data about sensors, radars, RF, EO/IR, UAVs and AGRON 1 internals is marked "US persons only".

Marketing

Channels and the publishing calendar, media, press, interviews, video, campaigns, the brand centre with approved texts.

Publishing is possible only after the check (AI or counsel) and approval. Leads from campaigns and business cards go to sales.

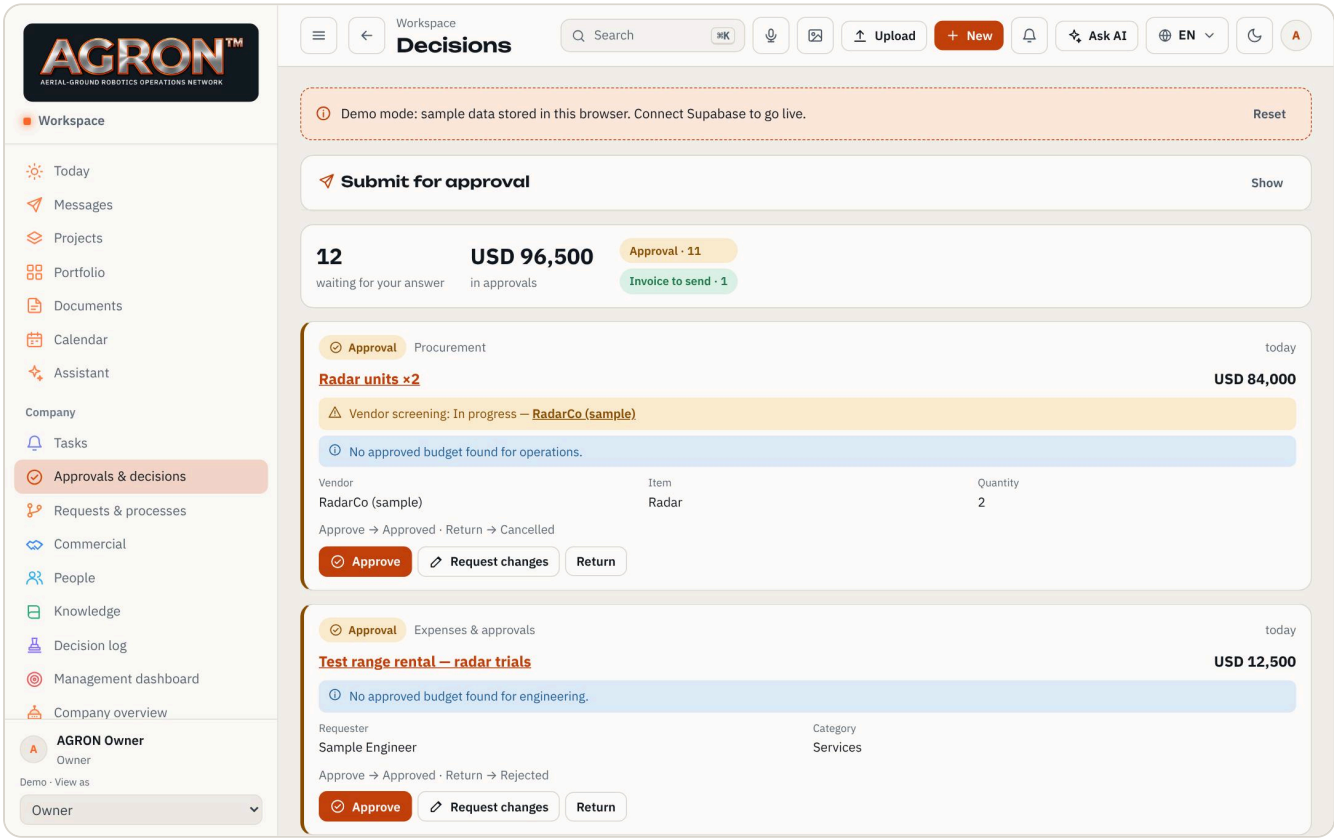

Legal and security

Legal: contracts (including contract changes — *Change order*), the equipment compliance matrix, licences, regulators, obligations with recurring deadlines, requests from departments.

Security: sanctions and end-user screening of parties, export classification of technical data, incidents, audits, the access log. Export-controlled records are visible only to confirmed US persons.

HR

People, hiring, onboarding with checklists, leave with approval, training, policies. The HR agent reminds about document and onboarding deadlines — with no personal details in notifications.

"Decisions": approvals with checks and a one-tap answer

Chapter 7

The system rhythm

Every 15 minutes
Mail intake, translations, SLA reminders, calendar
Automatic

Every working day, 10:00 UTC
Agents check deadlines, money and risks and prepare actions
"System" → "Automation", "Decisions"

Every morning, 8:00 your time
Digest email: approvals, deadlines, tasks, mentions
Email, "My day"

Monday
Brief for leaders: pipeline, cash, overdue items, risks
Email

Start of the month
Department reports and monthly KPIs
"Reports", department overviews

All the time
Phone notifications: approvals, mentions, SLA, invoices
Phone (once notifications are on)

The main rules

Signatures, payments and publications are never automatic. Workspace prepares, reminds and records; a person signs and pays.

Letters to outside addresses always wait for approval — even when an agent works in "Auto" mode.

"US persons only" data (export control) is seen only by confirmed US persons; it never goes to the client portal, into letters to other people or onto a device without a connection.

Status gates cannot be bypassed : *Won* without sanctions screening, *Shipping* without compliance, spending above the limit without approval, publishing without the check.

Nothing deleted disappears at once : the recycle bin keeps records for 30 days.

Originals never change in translation : the translation is stored next to them; editing in your own language keeps the original.

Part 3

End-to-end: from lead to service

Sixteen steps of a StarDome project — what a person does and what the system does.

01 Sixteen steps

02 Projects, money and decisions on screen

Chapter 8

Sixteen steps of a project

Sale steps 1–6 › **Project and build** steps 7–10 › **Delivery** steps 11–13 › **Money and service** steps 14–16

1 Sale

1 Lead

"Marketing" → "Leads" or a photo of a business card. Source, contact, segment, country, owner.

2 Deal

The lead moves to the "Deals pipeline": client, segment, StarDome configuration, value, expected close date. The client card holds the letter language.

3 Sanctions screening

As the deal moves, the compliance agent prepares a party screening in "Security" → "Restricted-party screening". Without *Cleared* the deal cannot become *Won*.

4 Proposal

"Make a proposal": price from the price list, quantity, discount, payment terms (30/40/30, 40/50/10, 50/50, 100%), delivery time, lease, language. The PDF with number P-2026-001 is saved in "Proposals & quotes".

5 Proposal approval

The proposal goes for approval. "Decisions" shows the checks: discount above 15%, price below the approved costing. After approval — sending to the client from the record.

6 Win and contract

The deal is *Won* (after the screening). The contract — in "Legal" → "Contracts". Changes of scope and price are then made as a *Change order*.

2 Project and build

7 Project plan

"Unfold the project": template (USA, UAE or Sprinter), start, owners, payment terms. All steps with dates and the milestone invoices are created; the timeline shows everything at once.

8 Build and parts

The build shows the bill of materials: needed, reserved, free, on order and short. "Reserve from stock" and "Draft orders for the shortage".

9 Purchasing

Orders above the limit go through approval with checks (duplicate, budget, vendor). Order and promised delivery dates are remembered — they make up the vendor's performance.

10 Factory acceptance (FAT)

The "Quality" → FAT step. When it is closed, the "before shipping" invoice becomes ready to send and finance is notified.

3 Delivery

11 Compliance before shipping

Export check of the build *Cleared*, deal screening *Cleared*, end-user certificate *Signed*. Without them the *Shipping* status and the dispatch of goods are blocked.

12 Shipping and installation

"Logistics & customs": carrier, tracking number, HS code, licence. After *Delivered* the installation is prepared; after *Commissioned* the build becomes *Installed* and the unit goes to "Installed base & SLA".

13 Site acceptance (SAT)

When site acceptance is closed, the "on acceptance" invoice is ready. Training of the client's operators.

4 Money and service

14 Money

Invoices are sent to the client and payments recorded. Overdue amounts follow the reminder ladder in the client's language. "Project money" shows the margin against costing.

15 Service

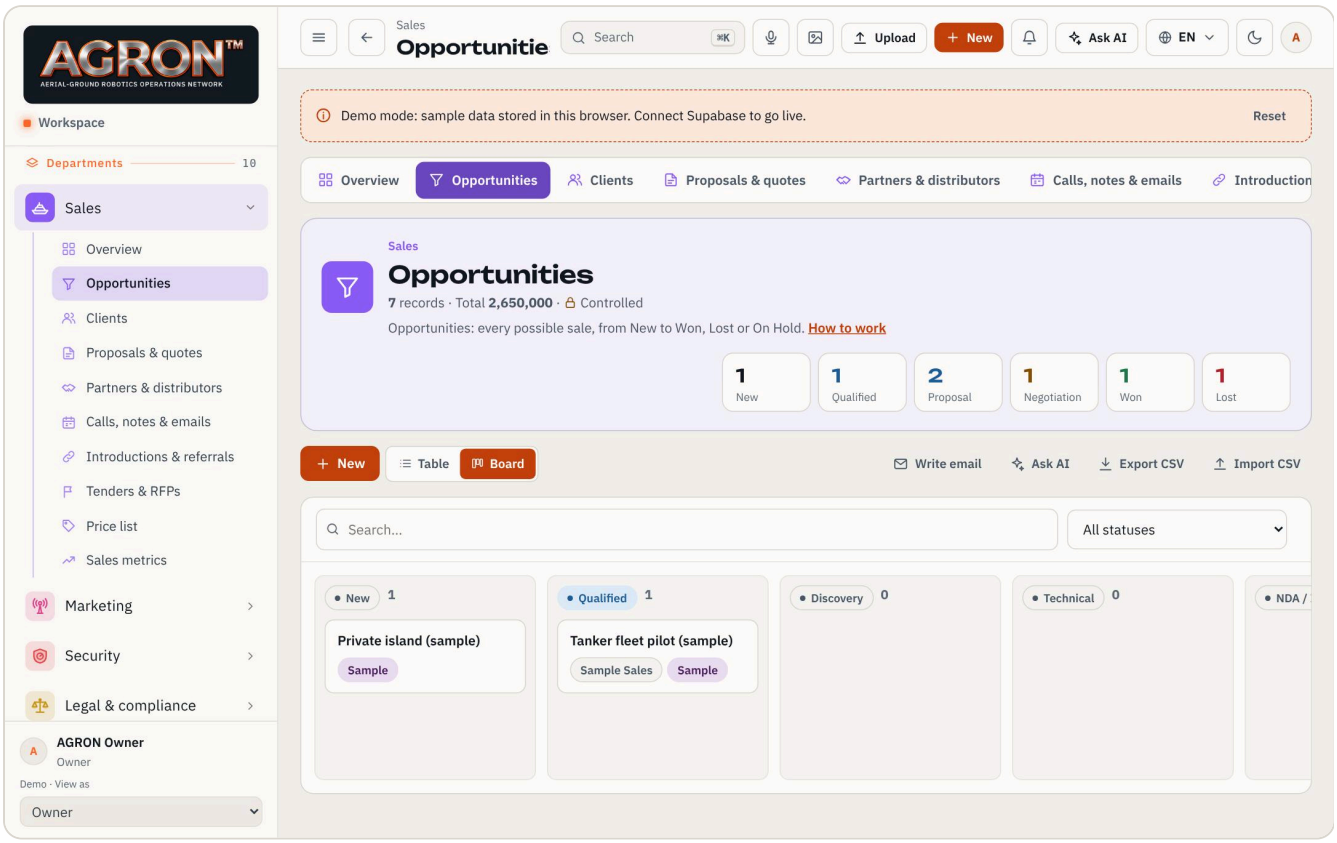

Client requests (also from the portal) with SLA deadlines; planned service by service plan; 60 days before the warranty ends — a deal for a service contract.

16 Project pack

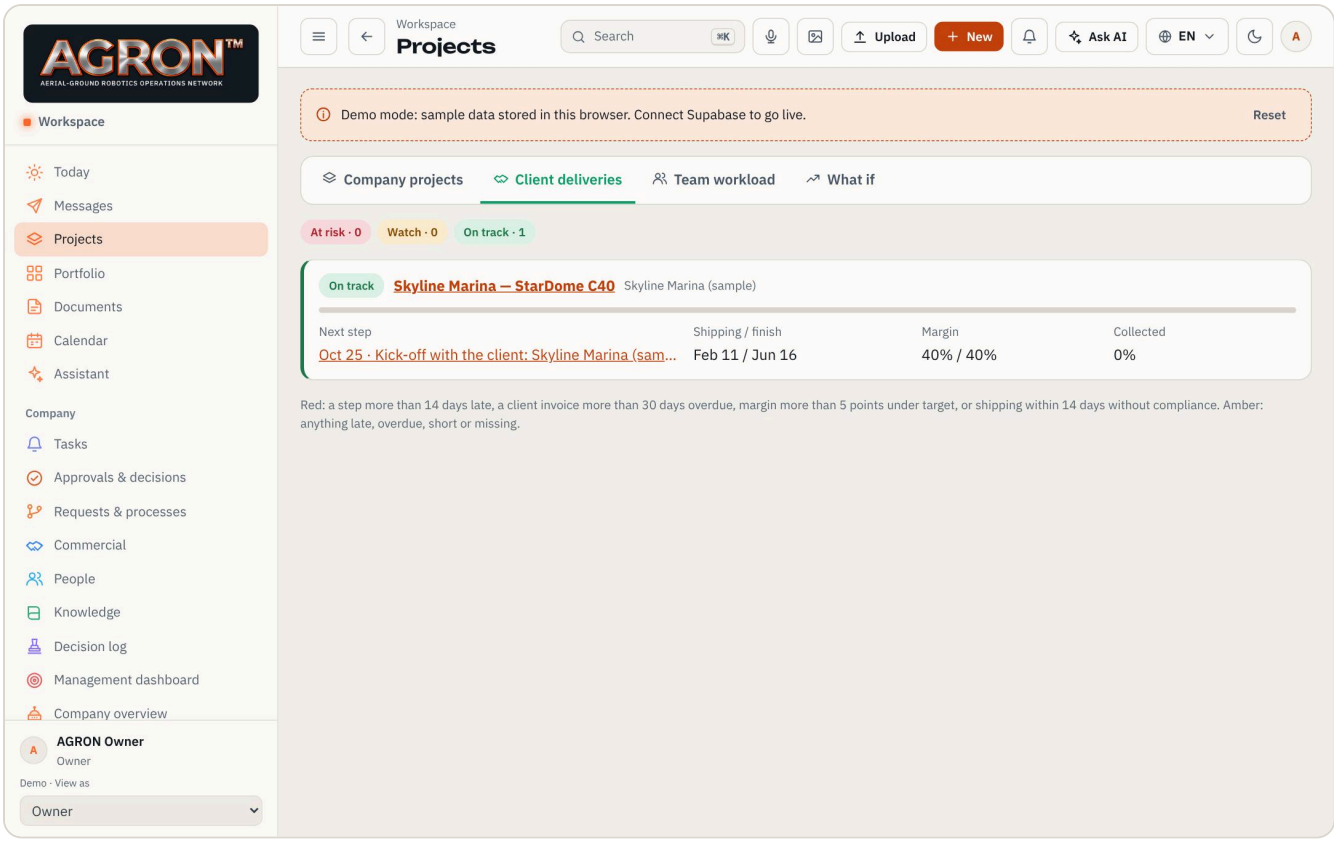

At any moment — "Project pack (PDF)": proposal, contracts, checks, plan, payments, acceptance, files and photos in one document.

Chapter 9

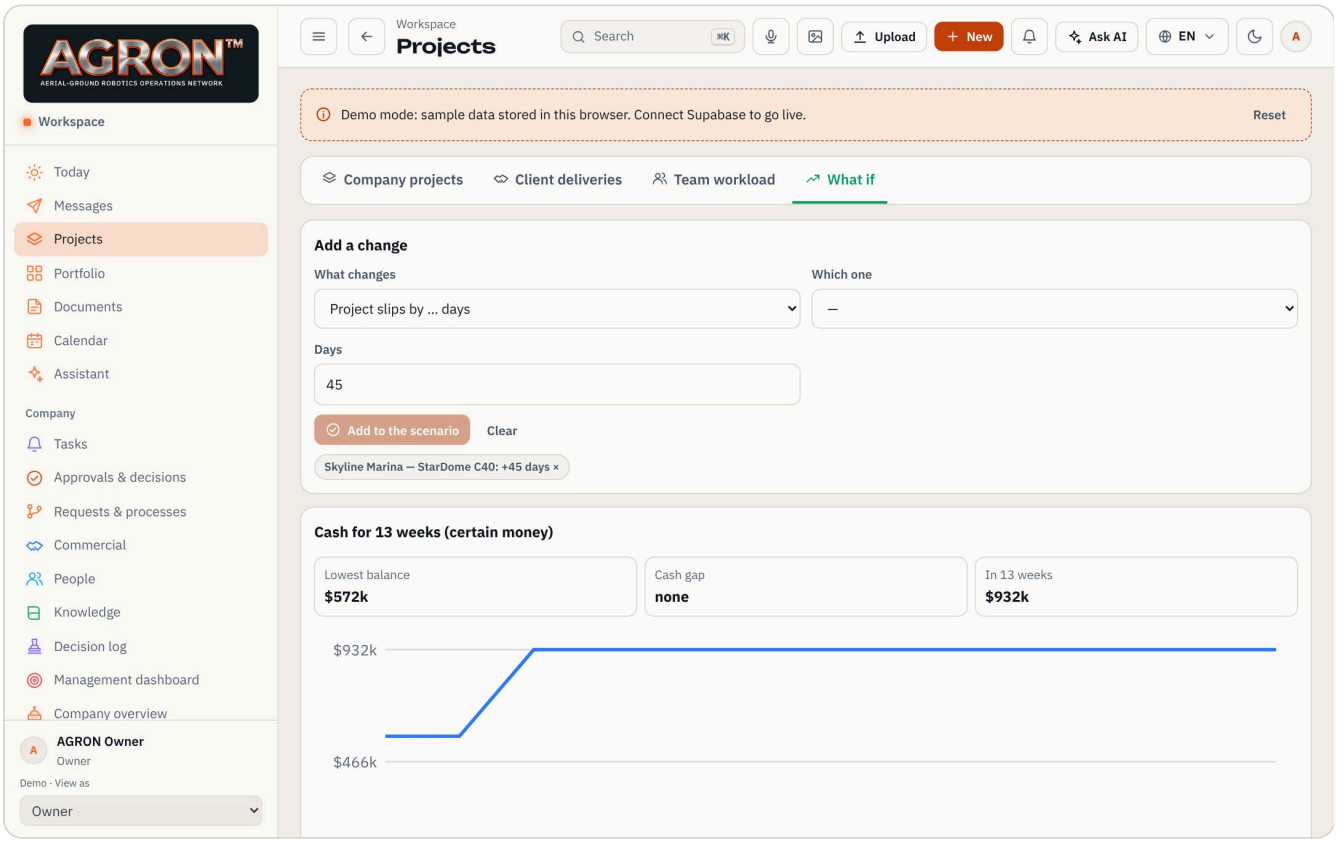

Projects, money and decisions on screen

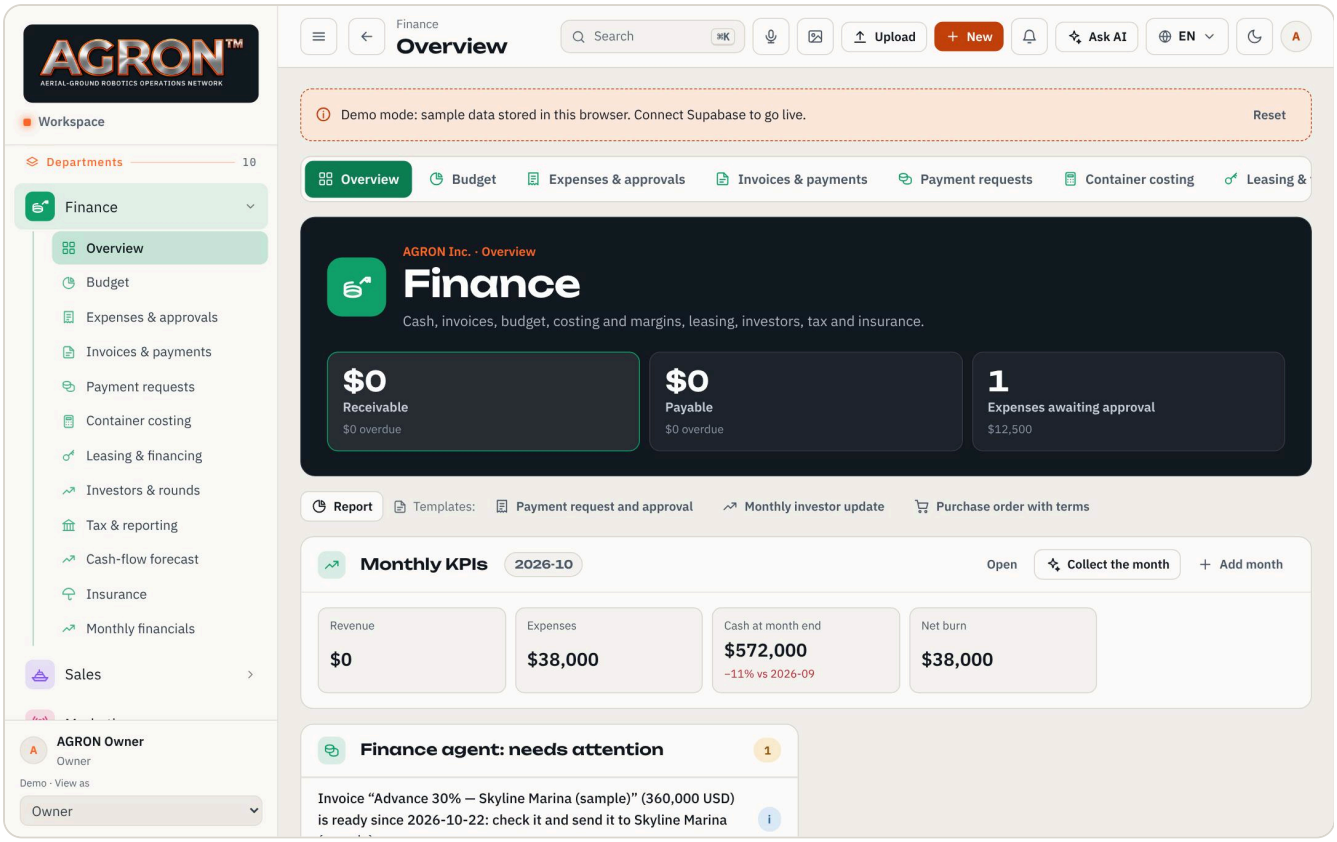

Deals pipeline: the board by stage with sums

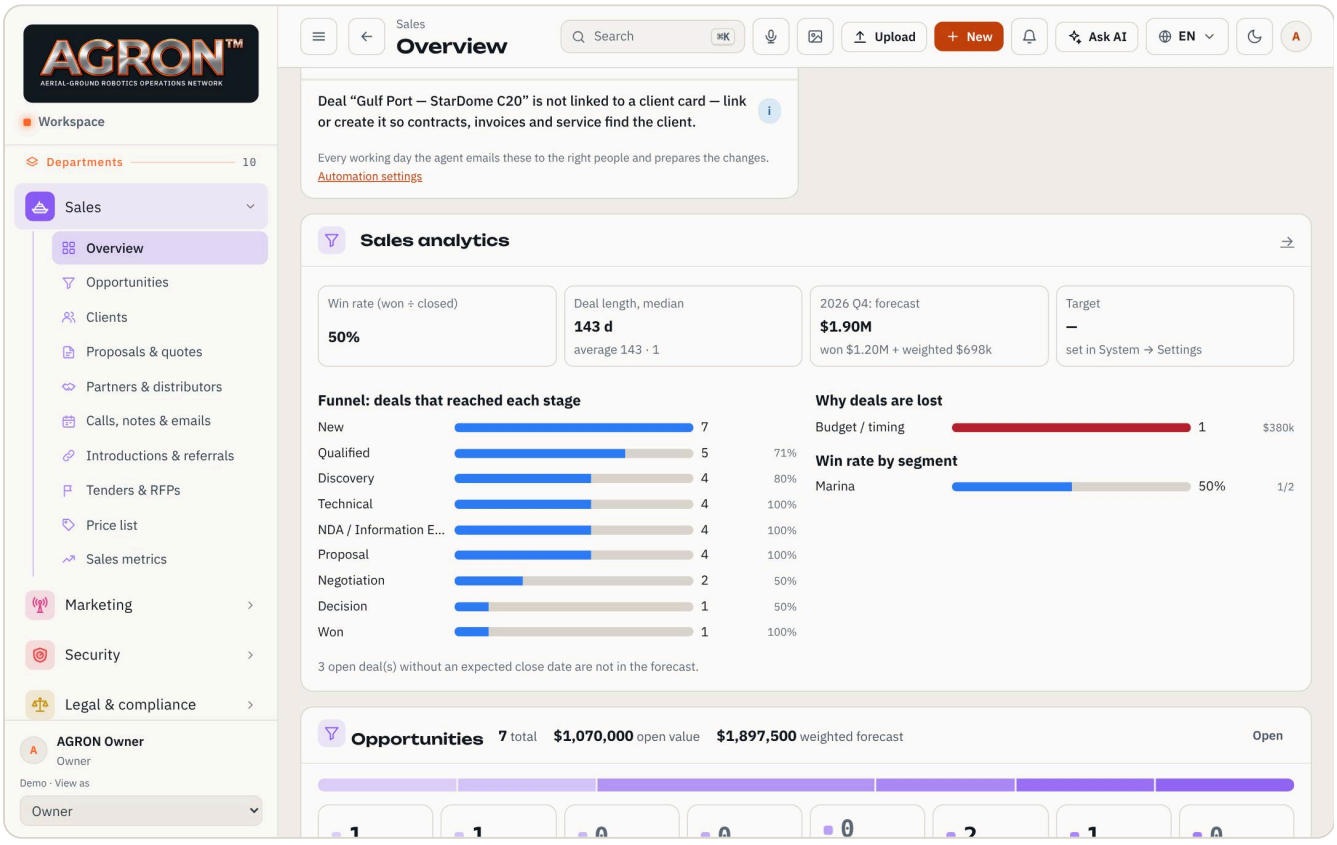

"Projects" → "Portfolio": traffic light, next step, margin, collected

"Projects" → "What if": cash for 13 weeks now and with the changes

"Finance" → "Overview": monthly KPIs and the agent's notices

"Sales" → "Overview" → "Sales analytics"

Part 4

How it works

Every mechanism of the system in detail — the same as "How it works" inside Workspace.

01 Daily work: Today, tasks, projects, documents, messages

02 Communication: discussions, mentions, notifications, announcements, meetings

03 Documents and knowledge: register, versions, approval, classification, search, calendar, decisions

04 Records: statuses, fields, links, files, history

05 Everyday tools: recycle bin, notifications, repeats, bulk actions

06 Languages and automatic translation

07 Access, roles and US-persons-only data

08 Requests and business processes

09 Commercial: customers, partners, sales and events

10 Manufacturing: products, BOMs, build units and the shop floor

11 From deal to service: proposals, projects, cash, calendar, client portal

12 Executive control, portfolio and voice

13 Project money, shipping and service

14 Projects: portfolio, margin, change orders, collection, workload

15 Faster decisions: decision centre, what if, photo, offline, sales analytics

16 Approvals and status gates

17 Smart upload and email intake

18 The AI assistant: Ask and Do

19 The automation engine: rules, modes, approval queue

20 The agents and what each one watches

21 Emails, notifications and their timing

22 Management dashboard

23 Reports, KPIs and the dashboard

24 Marketing: channels, calendar, brand center

25 Security, backups and data quality

26 Reliability: conflicts, offline work, two-step sign-in, operations

27 System settings for the owner

28 Using Workspace on a phone

29 When something does not work

Chapter 10

Daily work: Today, tasks, projects, documents, messages

Seven main sections — in the left menu on a computer and in the bottom bar on a phone: **Today**, **Messages**, **Projects**, **Portfolio**, **Documents**, **Calendar**, **Assistant**. Below them: tasks, approvals, people, the management dashboard (management only), departments, reports, administration and help. **+ New** in the top bar creates a task, a project, a document, a meeting or an approval request; the bell shows your notifications; your initial opens the profile menu.

Tasks (Company → Tasks)

- Title, description (bold, lists, links), **project**, department, **assigned to** (a colleague chosen from the list — tasks are linked to accounts, not names), priority *Low / Normal / High / Critical*, start date, deadline.
- Statuses: *New* → *In progress* → *Waiting* → *Review* → *Completed* (or *Cancelled*). The completion date is filled in by itself.
- Views: **All, My tasks, By project, By employee, Overdue**, the table or the **board** (drag a card to change the status). Filter by project, person and priority.
- Only the author, the person responsible, the project manager and management can change a task. A task can be given only to an active employee; when someone leaves, their old tasks still show their name.
- **Repeat** makes a recurring task; **Duplicate** copies one.

Projects — a project has a manager, a team, dates, milestones, tasks, documents, decisions and a discussion. Open it from Projects: **Overview** (progress, overdue work, delayed milestones, decisions waiting), **Tasks**, **Milestones**, **Team**, **Documents**, **Discussion**, **Timeline**, **Activity**. *Download summary* gives a one-page status.

Documents — the company register: type (contract, NDA, specification, budget, quotation, certificate, minutes, report…), project, department, owner, version and status. Open a document to preview or download its file. **Upload a new version** (the circular arrow next to a file) keeps every earlier version. *Send for approval* → the approver can **Approve**, **Request changes** (with a comment — the document returns to Draft) or **Reject**. US-persons-only documents and their files stay closed to everybody else.

Messages — every discussion you can see, newest first, with *Unread* and *Mentions of me*. Type **@** in any comment and pick a colleague: they get a notification that opens exactly that comment. In records shared with partners, comments are **internal** by default (partners never see them).

Calendar — meetings, task deadlines and milestones on a month view and an agenda; *Create meeting* with time, place and participants.

Notifications — new assignment, reassignment, deadline tomorrow, overdue, mention, comment, approval requested or decided, milestone moved, important announcement. Each arrives once. In My profile → Notifications choose what also comes by e-mail or to the phone, or switch an event off.

Search (⌘K or the search box) — tasks, projects, documents, people, decisions and discussions, in English or Russian; narrow it to one kind or one project. It shows only what you may open.

Chapter 11

Communication: discussions, mentions, notifications, announcements, meetings

Discussions belong to the work. Every project, task, document and meeting has its own Discussion — no separate chat. Who may open the record, may read and write there; nobody else learns it exists.

- **Reply** keeps answers in one thread. **@** suggests only people who may read the record.
- **Attach** a file, **Link** a task, document or milestone, **copy the link** to one message.
- **Edit** or **Withdraw** your own message — the earlier text stays in the audit history.
- The project manager or management marks **Important**, **Decision** or **Announcement** and can **pin**. A Decision goes into the project's decision log.
- In a document, choose **Review note on V2** — the note stays with V2 when V3 arrives. Approval entries are listed apart, under Approval notes; automatic history is separate.

Notifications. The bell and the Notifications page: All, Unread, Mentions, Tasks, Projects, Documents, Approvals, Company. Each one opens the exact message or record. **Mute** stops one kind of event. In My profile → Notifications choose e-mail and phone per event, **quiet hours** in your time zone and **one daily summary** — Workspace itself always shows everything at once. Critical announcements and security notices cannot be switched off.

Announcements. Management publishes to the whole company, a department, a project or roles, with priority, dates and “acknowledgement required”. People press **Read & Acknowledged**; a changed text asks again. Management sees audience, read, acknowledged and who is outstanding.

Meetings. Schedule → Prepare (agenda, documents) → Meet (call link) → Record decisions → Create tasks. Each action item becomes one task with person, deadline, project and the meeting as source.

Search (the magnifier → Discussions) finds messages by project, person, dates, mentions of you or decisions — only where you have access.

Chapter 12

Documents and knowledge: register, versions, approval, classification, search, calendar, decisions

One register. Documents in the menu is the Document Center: every document with its number, type, project, department, owner, version, status, classification and approval. Views: All, My documents, Recent, Shared with me, Needs review, Needs approval, Controlled, Archived; filters by project, department, owner, type, status, approval, classification, dates and version; table or list. You only ever see — and count — the documents you may open.

Numbers are given by the system. A new document gets its number when it is saved, for example AGR-POL-0001. The format is set by an administrator (Admin → Information settings → Document numbers) per type, department or project. Two people saving at the same moment never get the same number, and a number never changes.

Versions are kept, never replaced. Open the document → Versions → Upload new version, with a short note on what changed. Each version keeps its file, author, time, note, review and approval state and a fingerprint (SHA-256); Check integrity compares the stored file with it. Earlier versions stay and can be opened; Compare shows what changed in the details. Comments in the Discussion say which version they are about.

Review and approval belong to one exact version. Draft → In review → Changes requested or Approved → Effective → Superseded / Archived (the statuses can differ by document type). The reviewer records Reviewed or Request changes. Approval can be one approver, several in order or several at once — set per document type, never in the code. An approval is for the version that was sent: uploading a new version stops a pending approval, and approving 1.0 never approves 1.1. The record shows who approved which version and when, and the approval is added to the Decision log.

Classification is chosen by a person. Internal, Confidential, Restricted or US Persons Only (the list is set by an administrator). Workspace never guesses it from the text. Restricted documents are visible only to their owner, reviewer, the people they are shared with and management; US Persons Only documents only to US persons. The rule applies everywhere: lists, search, notifications, the Assistant and discussions. Files of controlled documents open only through a link that is recorded (who, when, which version — never the content) and are never shared outside the company. This is an access control inside Workspace, not an ITAR certification.

Departments are a directory. Admin → Information settings → Departments: name, code, manager, members. Profiles, announcements, documents, projects and reports pick from it; renaming a department keeps every link.

Knowledge. Procedures, how-tos and answers live in Knowledge as articles with an owner, category, review date and status (Draft → Review → Published → Superseded / Archived). Only the reviewer or management publishes. Search shows the current article, not the one it replaced.

Search everything you may open. The search at the top looks through documents (also the text inside files), knowledge, projects, tasks, discussions, meetings, decisions, announcements and people — with the same rules as browsing, so it never reveals a title, a number or a count you could not open.

Calendar. Day, Week, Month and Agenda: meetings (also repeating ones), milestones, task deadlines, document review and expiry dates and approvals waiting for you. Google Calendar receives your meetings once connected in My profile.

Decision log and minutes. Decisions in the menu → Decision log: what was decided, when, by whom, for which project, from which discussion, meeting or approval, who is responsible and by when. In a meeting, Generate meeting record builds the minutes from the agenda, notes, decisions and action items; they become the record only when the organizer approves them.

The Assistant answers from what you may open. It searches on the server under your own access and lists its sources; each statement is marked as found, calculated, a suggestion or not available. Text inside documents is treated as data, never as instructions. It changes nothing without your confirmation.

Chapter 13

Records: statuses, fields, links, files, history

Create and change

- **New** in any section opens an empty record; fill the title, status and the fields you know — nothing else is required. Save.
- Change the **status** as the work moves (for a deal: Lead → Qualified → Proposal → Negotiation → Won/Lost). A status change is what starts rules and agents, so keep statuses true.
- **Table** and **Board** views: on the board you drag a card to the next status.

Linked records — fields marked "(linked)" point to another record: a build to its deal and screening, a shipment to its build, an invoice to its deal. Type a few letters and pick. The record then shows the whole chain from the first lead to service, and the agents use these links to prepare the next step (for example, a won deal → a build and an invoice already linked to it).

Files — drop files into a record. They stay private; PDFs and office files become searchable in "Ask documents". Records marked US persons only keep their files under the same rule.

Comments and @mentions — write @Name to call a colleague; it appears in their My day.

History — every change is written with who and when. Administration → System → Data quality & audit shows the full trail, including what automation changed.

Out of Workspace — Export CSV, Import CSV (map columns once), PDF of a record, print, and email a record to someone.

Chapter 14

Everyday tools: recycle bin, notifications, repeats, bulk actions

Recycle bin (left menu → Recycle bin) — a deleted record is not lost: it stays 30 days with its comments and files. **Restore** puts it back exactly where it was (you need write access to that section). After 30 days it is removed for good; owners and administrators can also delete for good earlier.

Notifications on your phone — My profile → *Notifications on this device* → **Turn on**. You get a short signal when your decision is needed, when someone writes @YourName, when a decision on your request is made and when agents have news. Tapping it opens the right record. On iPhone first install Workspace (Share → Add to Home Screen) and turn notifications on from the installed app. Each device is turned on separately.

Similar records warning — when you create a record, Workspace looks for the same or a very similar title (in any of the four languages) and the same e-mail, and shows *Similar records already exist*. Open the one you need instead of creating a duplicate.

Repeating records — in any record with a date set **Repeat** (in the obligations calendar — the existing **Repeats** field): every week, month, quarter or year. When this one is completed (Done, Filed, Paid, Closed, Resolved…), the next one is created by itself with all dates moved forward. Good for tax filings, service visits, access reviews, insurance renewals, monthly reports.

Actions on many records — in the table view tick the boxes (the top box selects everything shown). Then set a status, a responsible person or a date for all of them at once, export only them to CSV, or move them to the recycle bin. Status checks still apply: records without the required check are skipped and counted.

Saved views — set a search, a status and a sort order, press **Save view** and give it a name: *My UAE deals*, *Late supplier invoices*. Views are kept in your profile on every device; the link icon copies an address that opens the same view for a colleague.

Since your last visit — at the bottom of My day: what colleagues and agents created, moved or commented in your sections since you were last here; one click opens the record.

Time zones — My profile → *Time zone* (set automatically on your first visit). The morning digest comes at about 8:00 your time; My day shows a team clock with the local time in every city where colleagues work (🌙 = outside working hours).

Chapter 15

Languages and automatic translation

Workspace works in **English, Russian, Ukrainian and Arabic** — the interface, the help, and everything people write.

How it works

1. You write in any of the four languages — a record, a comment, a FAQ answer, a template.
2. Within seconds after saving, AI translates the new or changed texts into the other three languages. Names, companies, product names, codes, amounts, dates, e-mails and links stay exactly as written; status names (Won, Shipping…) stay in English.
3. Each colleague sees the record in **their** interface language: in tables, boards, department overviews, search, reports, PDFs and the morning e-mail.
4. **The original is never replaced.** In an open record the chip *Translated automatically from … · Show original* switches between the translation and the original.

Editing a translated record — change what you need in your language and save. Texts you did not touch keep their original wording; your changes are saved as you wrote them and translated again for everyone else.

What is translated

- Record titles and text fields (descriptions, notes, summaries), comments, FAQ entries (each gets its other three language versions), saved templates.
- System e-mails — morning digest, agent notices, the Monday brief, monitoring, backup and monthly reports — come in each person's language (the one chosen in the top bar; it is saved in the profile).
- Agent proposals and log lines in Administration → System → Automation.

What stays as written — names, codes, numbers, e-mail and link fields; attached files (ask about them in any language in *Ask documents*); letters to clients, which are written in the client's language and can be translated with *Translate (AI)* before sending.

Records written by agents or e-mail intake are translated by the scheduled job or the first time someone opens them. Older records: the owner presses **Translate now** in System → Settings.

Control and cost — System → Settings → Languages: switch translation of data and e-mails on or off. Translation uses the company AI budget; over the budget new texts stay in the original until next month. US-persons-only records are translated with the same rules and stay visible only to US persons.

Chapter 16

Access, roles and US-persons-only data

Roles decide what a person sees: owner, admin, management, department roles (engineering, operations, finance, sales, marketing, hr, legal, security), partner and pending.

- **Owner** sees and changes everything, including company settings.
- **Admin** manages people, access, rules and agents.
- A **department role** reads and writes its own sections; other sections are read-only or hidden, as set in Administration → Access.
- **Partner** sees only the portal sections shared with them — never internal records.

US persons only. Records with export-controlled technical data are marked *US persons only*. Only people whose profile is confirmed as a US person can open them, their files or their AI answers. Agents keep this rule too: such records are mentioned to others only as “US-persons-only record”, without details.

How to give access

1. Administration → People: invite by email, choose the role.
2. Confirm “US person” only after checking documents — this is a legal decision.
3. Administration → Access: fine-tune read/write per section.

Access log — every sign-in, download and opening of a controlled record is written. Security sees the log and gets an alert on unusual activity.

Chapter 17

Requests and business processes

Requests & processes. Company → Requests & processes is one place to raise a request and follow it to the end. *New request*: purchase, payment, contract, engineering change, travel or event, or another request — you see only the kinds your role may raise. Each request gets a number (for example AGR-PR-2026-0001) and follows its process step by step: the screen shows who has it now, what they need to do and by when.

My processes. *Needs my action* — steps and approvals waiting for you, with what to do in plain words. *Requested by me*, *Waiting* (for a vendor, a client or another party outside), *Blocked* (with the reason) and *Completed*.

Steps. A step is a task (it appears in the task list), a review (approve, ask for changes or reject — never your own request), an approval, documents to attach, a decision, details to fill in, waiting for someone outside, a check, or an automatic action. Each step has a responsible person or role and a due time in hours, business days or calendar days. While we wait for someone outside, the process clock stops. A late step is reported once to the person responsible and, where set, escalated once — never repeated.

Approvals are for exact values. Who approves comes from the approval rules (for example up to 5,000: the department lead; up to 25,000: plus Finance; above: plus Management) — roles and leads, never named people. The requester never approves their own request. An approval is given to the exact amount, vendor, quantity or document version; if one of them changes — a revised quotation, a new contract version — the approval no longer counts and a new one is requested.

Purchases. Request → technical review → quotations → vendor selection → approval → purchase record (numbered, created automatically) → the order is placed by a person → delivery → receiving → closed. Quotations are shown side by side; the lowest price and the shortest lead time are marked as facts and you write why you choose one — Workspace never says which is best, and choosing does not skip the approval. Receiving is recorded explicitly (arrived, refused, condition); partial deliveries are kept; refused or damaged goods open an issue and a follow-up task with the vendor. Workspace sends nothing to vendors by itself.

Payments. Request → review → approval → ready for payment → paid → reconciled. *Paid* means Finance recorded the payment made in the bank (date, amount, bank reference). Workspace moves no money and keeps no bank details, card numbers or passwords; the person who approved a payment does not also record it.

Contracts, obligations, engineering changes, issues, travel. A contract is approved as one exact version of its document; signing is done by people outside Workspace. A contract's obligations are entered — or proposed from the contract text and confirmed — by a person; due and overdue ones appear in deadlines and attention. An engineering change needs a confirmed impact record (cost, schedule, configurations, documents, BOM, inventory, tests, certification notes written by a person) before approval; implementation and documentation updates are tasks. Issues (quality, delivery, technical…) go open → investigating → action → verification → closed. Travel: request → approval → planning → bookings recorded → ready → completed → expense claim; bookings are made outside Workspace.

Operations and budgets. Needs action, purchases, payments, contracts, engineering changes, issues, waiting outside and process deadlines — each number opens its exact list, counted only from records you may open. Project budgets show the budget, requested (estimates, never subtracted), approved, committed (ordered), paid (recorded) and remaining = budget − committed − approved, in each currency. This is control, not accounting.

Organisations. One organisation can be a vendor, a client and a partner; you see only the relationships you may open. People at these organisations get no Workspace account.

Process builder (owners, administrators, management). A process is an ordered list of steps with transitions and conditions chosen from fields and operators — no code. *Validate* shows unreachable steps, missing owners, loops, a missing end, unknown roles or documents and approval-rule errors. A published version never changes: make a new version; running processes keep the version they started on.

Executive control and the Assistant. Executive control shows an Operations card; the weekly review has an Operations section; the Assistant answers questions such as “What purchases need my approval?” from the records you may open, marking facts, calculations and what is not available.

Chapter 18

Commercial: customers, partners, sales and events

One place, the same records. Company → Commercial brings together organisations, contacts, leads, opportunities, proposals, meetings and events. It is not a second database: an organisation is one record whatever it is to us — prospect, customer, partner, agent, vendor — shown as relationship types. A relationship type says nothing about legal or regulatory status. Contacts are business records, not Workspace users.

Leads. A lead is a first contact: from the website, an e-mail, an event, a partner or an introduction. Every lead has an owner and a follow-up date. Possible duplicates (same e-mail, phone, website or name) are shown, never merged automatically. *Convert* creates or reuses the organisation, the contact and the opportunity in one step — all or nothing — and the introduction travels with them.

Opportunities. Each has a number (AGR-OPP-…), one owner, a stage, a value with its currency, and a next action with a date. Stages and their rules are set in Commercial → Settings; missing information is never invented to move a stage, and an authorised exception needs a reason. Unknown is a valid answer in qualification. Every change of value or stage is kept with who, when and why. Health (Healthy, Attention, Risk, Stalled) is computed from facts and shows its reasons; it is not the probability of winning.

Proposals. One record per version under one number. A proposal becomes Approved only through the PROPOSAL approval process — never because its author created it — and is sent only after approval. A sent proposal is never replaced: a change is a new version.

Pipeline and forecast. Values are shown per currency and never added across currencies. Weighted pipeline (value × probability) and the forecast are management estimates, not revenue.

Event mode. On the phone at IDEX: Capture saves a lead in seconds; paste the card text or QR content, or photograph the card — fields are proposed, you confirm. *Today* shows the team and what came in; *After the event* lists hot leads and leads without owner or follow-up, to assign in bulk. Nothing is sent to the leads.

Follow-up and review. Today and Executive Control show who to follow up with. *Commercial review* gathers wins, losses, stalled opportunities, decisions expected and what we wait for. From an opportunity you can create a task, a reminder or a note (you confirm each), or draft a message — as text only, never sent from Workspace.

Authorities. Commercial Admin, Workflow Admin, Proposal approver, Pricing approver and Export commercial data are given by the Owner. A System Administrator holds none of them by role. Approval thresholds that came with the system are marked UNAPPROVED DEFAULT CONFIGURATION until the Owner approves them as AGRON policy. A partner or agent sees no opportunity unless it is explicitly shared; US-persons-only restrictions stay in force everywhere.

Chapter 19

Manufacturing: products, BOMs, build units and the shop floor

One chain, the same records. Company → Manufacturing follows a unit from its product and configuration to shipment, on the records Workspace already has — purchase requests, documents, issues, approvals, suppliers and projects are reused, never duplicated.

Products, configurations, items, BOMs. A product family (C20, C40, Sprinter) has configurations; each configuration has its routing (work steps), required inspections, tests and documents. The item master gives every part its AGRON number (AGR-ITM-...) and keeps the manufacturer part number apart. A BOM is multi-level and has revisions A, B, C...; the approval is for that exact revision and its line set. An approved configuration or BOM is never edited — a change is a new version or revision with a reason, approved again. Alternates are proposed by anyone (procurement too) and approved only by an engineering authority.

Build units. One record per physical unit (AGR-C20-0001...). Release pins the approved configuration and the BOM revision that applies (effectivity: all future units, from a unit, listed units). The lifecycle — Planned, Engineering, Material Planning, Procurement, Ready for Build, Assembly, Integration, Inspection, Testing, Rework, Acceptance, Ready for Shipment, Shipped, Delivered, Hold, Cancelled — and each status's prerequisites are set in Manufacturing → Settings; a skipped prerequisite needs an authorised exception with a reason. The unit view has fourteen tabs: overview, BOM, materials, work orders, installed, inspections, tests, software, issues, changes, As-Built, documents and shipping, cost, history.

Materials and inventory. The material plan shows, per unit and item, required, used, allocated, free stock offered, ordered and the shortage; free stock is shared in order of target date. A shortage never orders anything: the unit's Materials tab raises a purchase request that goes through the purchase process. Receiving puts goods into Inspection first. Stock has locations and states (Available, Allocated, Quarantine, Inspection, Rejected), never goes below zero, and every change is a ledger line with a person and a reason. A serial can be installed in one active unit only; allocations cannot be taken twice.

Work and the shop floor. Work orders come from the routing, each pinned to the approved work instruction current when it was made. On a phone, Shop floor (/build) lists my work, ready, in progress, blocked, inspection required and completed today; scan a label or type a code; start, follow the checklist, record what was used and installed and the software version, add photos, complete. Nothing measures people's speed.

Quality and tests. An inspection records Pass, Fail, Conditional or Not Applicable; a failure opens a linked nonconformance issue and is never overwritten. Use As Is needs a Quality Approver; Rework creates a rework work order and a reinspection. Test runs follow an approved procedure version; limits are checked deterministically, the result is the operator's decision and never inferred, and a passing run needs a Test Approver.

As-Built, changes, acceptance, shipment. As-Built records what was actually installed, consumed, inspected and tested, with serials, lots and software, as numbered revisions; it is compared with the approved BOM line by line. An engineering change lists the objects it may affect as suggestions; a person confirms them, and an Engineering Change Approver decides Incorporate or Keep current per unit — completed units are never retrofitted. Acceptance (Unit Acceptance Approver) is internal acceptance, not certification; shipment release (Shipment Release Approver) checks the documents and packing, and no carrier is booked by Workspace.

Cost, labels, Assistant. Costs are operational build costs, per currency, shown only to those the cost policy names — not accounting cost. Labels carry a QR code (AGR1:…) that opens the record only for people who may see it. The Assistant answers manufacturing questions from your records with sources and may propose actions that you confirm. Capabilities (BOM Editor, BOM Approver, Inventory Manager, Build Manager, Work Order Manager, Quality Inspector, Quality Approver, Test Operator, Test Approver, Engineering Change Approver, Unit Acceptance Approver, Shipment Release Approver, Manufacturing Admin) are given to named people; a role alone gives none. US-persons-only and restricted units leak nowhere — not in counts, shortages, serial search, costs or answers.

Chapter 20

From deal to service: proposals, projects, cash, calendar, client portal

Commercial proposal in one click — open a deal → *Commercial proposal* → **Make a proposal**. The price comes from Sales → Price list (active line for the configuration and currency); set quantity, discount, payment terms, delivery weeks, validity, an optional lease option and the document language (English, Russian, Ukrainian). The preview shows the document; **Create proposal + PDF** saves it to *Proposals & quotes* with its number (P-2026-001…), attaches the PDF in the company style and can move the deal to *Proposal*. Then: send for approval (required above a 10% discount by company practice) → approved → send to the client from the record.

Project plan from a won deal — in a deal at *Negotiation* or *Won*: **Unfold the project**. Choose the template (assembly in the USA, in the UAE, or StarDome Sprinter on a van), the payment terms and the contract value, the start date and the responsible people per role. Workspace creates, linked to the deal: kick-off, end-user and sanctions screening, the build, long-lead purchases, factory acceptance test, shipping, installation, site acceptance and handover, operator training, the payment invoices by milestone (advance, before shipping, on acceptance) and the first service visit — each with its date. Steps already made are not duplicated; the build made when the deal was won is reused.

Cash for the next 90 days — Finance → Overview, first card. Week by week: unpaid invoices by due date (late ones count in this week), approved expenses, ordered purchases by arrival date — this is *certain money*. The dashed line adds *probable money* from open deals: value × chance by stage (Lead 10%, Qualified 25%, Proposal 50%, Negotiation 75%), the 30% advance on the *Expected close* date and 40% about 12 weeks later. The starting balance is the latest *Cash* in Finance → Metrics. When the certain balance falls below zero, the card shows **Cash gap from …** and the Finance agent warns leaders and finance with the largest payment in that week. *Table* shows the same numbers by week.

Google Calendar, both ways — My profile → *Google Calendar* → **Connect Google Calendar** (you agree in Google; Workspace never sees your password). Your planned client meetings and company meetings appear in your calendar; meetings in Google with a client's people (matched by e-mail, company domain or the client's name in the title) appear in *Meetings & calls*, linked to that client's open deal. Moving a meeting in Google moves the record. Sync runs every 15 minutes (with the schedule key) or once a day; **Sync now** any time; **Disconnect** removes the link.

Client portal — open a client → *Client portal* → choose the language and how long the link works → **Create a link** and send it to the client (it is shown once). Without an account the client sees: progress of each order step by step, shipping with the tracking link, installation date, proposals you sent with the PDF, invoices, installed systems with warranty and next service — and can send a **service request**, which arrives in Operations → Support with a phone notification to the service team. Only these items are shown: notes, internal prices, other clients and US-persons-only records never are. **Revoke** stops a link at once; links also expire by themselves.

Chapter 21

Executive control, portfolio and voice

What needs attention. Today → *What needs attention* (managers: Company → Management dashboard → Executive control) answers on one screen: what needs attention now, portfolio health, what is due today, what you are waiting for, decisions waiting and the next deadlines. Every number opens the records behind it; a line opens its reason; the reason opens the record.

Health is calculated, never guessed. Each project gets a score from 0 to 100 and a level — Healthy, Attention, Risk or Critical. Points are taken off for named reasons only: no owner, overdue or blocked tasks, an overdue or close milestone, a passed or close deadline, no activity for a while, no open tasks, tasks without a responsible person, approvals and decisions waiting too long, documents in review, a project on hold. Every level shows its reasons and the records they come from. Progress is completed tasks / tasks (or milestones reached when a project has no tasks).

Only what you may open. Every number, reason, report, alert and Assistant answer is calculated from the records you can open. A US-persons-only or Restricted record you cannot open never changes anything you see — not even a count.

Open loops and next action. Workspace finds unfinished work by itself — a task without owner or due date, overdue, blocked or waiting for review; a project without owner, milestone or next step; a decision waiting or in review too long; an approval that waits or whose approver is inactive; a document waiting for review, approval or renewal; a meeting decision not logged or an action without a task. Each shows how long it has been open, who is responsible and the next action, which opens the place where you do it. Nothing is done for you.

Waiting for. What others wait for from you, what you wait for from colleagues, your team and outside parties (a supplier, partner, client, contractor or authority — set a task to Waiting with who you wait for). *Remind* sends one notification a day; *Escalate* tells the project manager (or the department head) and is kept in the history; reassign or resolve in the task itself.

Portfolio. Projects can belong to a portfolio or program (Company → Portfolios; management creates them). The Portfolio page shows each portfolio with its health, progress, overdue and blocked work, decisions and approvals waiting and the next milestone; filter All, Active, Attention, Risk, Critical, Completed and open a project. A project needs no portfolio.

Project Advisor. Project → Advisor: why the project has its level, what needs attention, suggested management actions, what it waits for, deadlines and what changed this week — each line with its source. *Explain with Assistant* asks the Assistant to explain these facts; it reads them again on the server and cites them.

What changed. Since yesterday, the last 7 days or the last management review: health and status changes, milestones reached or delayed, new and resolved blockers, important tasks that became overdue, decisions, approvals, approved documents, deadline and owner changes. Small edits are not listed.

Reports and the weekly review. Portfolio status, people / workload (counts only — never a measure of performance), deadlines and decisions as CSV; *Prepare the Weekly Management Review* assembles the packet (summary, health, critical issues, decisions, waiting for, deadlines, changes, completed work, next week) to copy, download or print; *Mark this review as held* starts the next “since last review”.

Alerts. A project turning critical, an overdue milestone, a critical blocker or overdue critical task, an approval or decision over its time limit, a project without owner: one notification per condition, nothing repeated while it stays true, closed by itself when it clears.

Team status. People → Team status: role, department, location, time zone with the local time, the availability each person sets in My profile, and their projects and current tasks among those you may open. Nothing is measured.

Voice Inbox and commands. Today → Voice Inbox. *Capture* keeps what you say or type (“Remind me tomorrow to check the Platinum documents”) and turns it into a task, reminder, follow-up, project item or note. *Command* does it now: “Show overdue”, “Open project C20”, “Create task for Anton to finish the specification Friday”, “Move the deadline of … to Monday”, “Complete task …”. Showing and searching happen at once; every change is shown first and done only after your *Yes*; when something is unclear Workspace asks instead of guessing. Approvals, access changes, deletions and outside e-mails are never done by voice. Where a change can be reversed exactly, *Undo* is offered; every proposal, confirmation and result is recorded.

Settings. Owners and management change the thresholds (when a project is stale, how long an approval or decision may wait, warning periods, health levels, attention, alert pause) in Executive control → Settings; every change is kept with who made it.

Chapter 22

Project money, shipping and service

Payments by milestone — when you unfold a project in a won deal, choose the **payment terms** (taken from the latest proposal) and check the **contract value**. Workspace drafts one invoice per part of the schedule, for example 30/40/30:

- *Advance* — ready at once, due 14 days after the start;
- *Before shipping* — becomes ready by itself when **factory acceptance (FAT)** is closed;
- *On acceptance* — becomes ready when **site acceptance (SAT)** is closed.

Draft milestone invoices already count in the cash forecast on their planned dates and move with the project timeline. When an invoice becomes ready, finance gets a notice and a phone signal; the invoice shows *Ready to send*. A person checks the amount and details and changes the status to *Sent* — nothing is sent by itself.

Nothing ships without compliance — a build cannot go to *Shipping* or *Installed*, and a shipment cannot be *In transit*, *Customs* or *Delivered*, until three things are done: the build's **export / end-user check** is *Cleared*, the **sanctions and end-user screening** of the deal is *Cleared*, and the **end-user certificate** on the build is *Signed* (or *Not required*). The message names what is missing. While a build is in integration or testing, the operations agent reminds you to request the certificate.

Planned service and warranty — an installed unit shows its service schedule by service plan: Premium 24/7 every 3 months, Standard every 6, Basic every 12. **Create service request** opens a planned-service request; when it is resolved, *Last service* is filled and *Next service* moves forward by itself. 60 days before the warranty ends, sales are reminded and a deal *Service contract — unit* is prepared (or press **Offer a service contract**).

Vendor performance — in a vendor and in every purchase order you see the vendor's grade from its orders: on time (received by the date promised when the order was placed), average delay, units rejected on receipt (the *Rejected on receipt* field) and unit price change. **A** — 90%+ on time and up to 1% rejects; **C** — under 70% on time or over 5% rejects; *new* — fewer than two received orders. The grade is also shown next to each supplier in *Parts for this build*; the agent warns about vendors that are late too often.

Project pack — in the project plan, **Project pack (PDF)** makes one document: summary (value, paid, still to collect), proposal, contracts, screenings, export check and certificate, plan with dates, payments, acceptance with notes, the list of attached files and up to 10 acceptance and installation photos. It can also be kept in the deal's files. A pack with export-controlled records is marked so on the first page.

Chapter 23

Projects: portfolio, margin, change orders, collection, workload

Projects → Portfolio — every won deal with a project on one screen: a traffic light, progress, the next step, shipping and finish dates, margin and the share collected. **Red** — a step more than 14 days late, a client invoice more than 30 days overdue, margin more than 5 points under target, or shipping within 14 days without compliance. **Amber** — anything late, overdue, short of parts or missing. The reasons are listed under each project; press a colour to show only those projects.

Project money (in a won deal) — the contract with signed change orders, invoiced and collected, costs so far (approved, ordered and received purchases for its builds, approved expenses linked to the deal, supplier invoices) and the expected margin against the approved costing of the configuration. Link travel and other project expenses to the deal (*Project / deal* field) so they count. The finance agent warns when costs go more than 5% over plan or the margin falls more than 5 points under target. Amounts are converted to USD at planning rates.

Change orders — **New change order** in *Project money*: title, amount (+ or −), schedule impact in days and the scope. It is a contract of type *Change order*: send it for approval (approved → *Negotiation*), agree it with the client, then set *Signed*. When signed, an increase becomes a draft invoice ready to send; a decrease lowers the last unsent milestone invoice. If the schedule changes, move the step in the project timeline — the later steps follow.

Collection — an unpaid client invoice shows the reminder ladder: *friendly reminder* at 7 days, *second reminder* at 21, *final notice* at 45 (leaders are told from the second step). Each letter is written in the client's language — set **Language for letters** on the client card (English, Русский, Українська, العربية) — and waits in *Waiting for approval*; a person can edit it before it goes. Sent reminders are listed in the invoice. Finance → Overview shows **days to get paid (DSO)** and the top overdue clients.

Projects → Team workload — open items with a person and a date (tasks, project steps, requests, purchases and other records with an assignee or owner), per person, for the overdue pile and the next 6 weeks. More than 8 items in a week is marked as an overload. Press a number to see the items and open them.

Chapter 24

Faster decisions: decision centre, what if, photo, offline, sales analytics

Decisions (menu) — everything that waits for your answer, most urgent first: approvals sent to you (with the amount, the key fields, who asked and what the status becomes), agent proposals (owners and administrators: what exactly will happen, the full letter text for emails), milestone invoices ready to send and projects at risk (leaders). **Approve / Return**, **Do it / Decline**, **Mark as sent** — one tap, a comment is optional. A letter you want to change first opens in System → Automation. **Checks before approving** appear on approval cards and in the record while it waits: possible duplicate, above the department budget, vendor not screened or blocked, unusually large amount, discount above 15% or price below costing; with a red check the button reads *Approve anyway*.

Projects → **What if** — a sandbox for dates before you decide: *a project slips by N days*, *a client pays N days later*, *a deal closes on another date*, *a purchase is paid on another date*. Add one or several changes and compare the lowest balance, the cash gap and the balance in 13 weeks — now and with the changes — on one chart, plus how the finish dates of projects move. Nothing is saved.

Photo → **record** (camera button at the top) — take a photo: a **receipt** becomes an expense (amount, currency, category), a **business card** becomes a lead (name, company, email, phone, country), a **delivery note** finds the open purchase order of that supplier and marks it *Received* with the quantity and rejects. The photo is reduced on the phone, read by AI, you check the fields, and the photo stays attached to the record.

Without a connection — on a vessel, in a port or on an island the app keeps working once it is open: new records, changes, comments and photos are kept on the device, a bar at the bottom shows how many wait, and they are sent by themselves in the same order when the connection returns (or press **Send now**). Lists show what was already loaded in this session. US-persons-only records are never kept on the device. If something cannot be sent (for example a spending limit), the bar shows why and lets you discard it.

Sales → **Overview** → **Sales analytics** — the funnel (deals that reached each stage, conversion between stages), win rate, deal length (median and average), the quarter: won + weighted open deals with an expected close date in the quarter against the **target** (owner: System → Settings → Sales target per quarter), losses by reason and win rate by segment. When a deal is Lost, fill **Why lost** — the sales agent reminds you if it is empty.

Chapter 25

Approvals and status gates

Approvals — in sections that need a decision (quotes, contracts, purchases, publications…) the record has an **Approval** block.

1. Press **Send for approval**, choose the approver from the list (only people allowed to decide are shown) and add a note.
2. The approver sees it in **My day** and in the morning email, opens the record and presses **Approve** or **Reject** with a comment.
3. The decision, the name and the time stay in the record's history.

Status gates — some statuses are locked until a check is done, and the save is refused with a clear message:

- A deal can become **Won** only when sanctions and end-user screening is *Cleared*.
- A build can move to **Shipping** (and a shipment be in transit) only when the export check, the screening of the deal and the end-user certificate are done.
- Social posts, press, interviews and video can be **published** only after the release check; sales kits and campaigns need an approval first.

There is no button to skip a gate: do the check, then change the status. **Signatures and payments are never automatic** — Workspace prepares, reminds and records; a person signs and pays.

Chapter 26

Smart upload and email intake

Smart upload — drop any document (contract, invoice, certificate, spec) on the upload button. AI reads it, suggests the section, the title, the status and the fields, and shows you the draft. You correct and save — nothing is saved without you.

Email intake (the Intake agent) reads one company inbox **read-only** every 15 minutes:

1. Skips newsletters, automatic replies, spam and mail from the company itself.
2. For every real letter, AI decides which section it belongs to (invoice → Finance, RFQ → Sales, CV → HR…) and prepares a record with the sender, subject, short summary and attachments (signatures and tiny images are dropped).
3. In *Suggest* mode the record waits in the approval queue — open it, check, approve. In *Auto* mode it is filed at once and the department gets a notice.
4. Letters that may contain export-controlled data are filed as *US persons only*.

The inbox is never changed: no letter is deleted, moved or answered by the agent.

Chapter 27

The AI assistant: Ask and Do

Open the assistant with the spark button.

Ask — questions about your data and documents: “Which deals close this month?”, “What does the Hexa contract say about warranty?”. Answers cite the records and files they used; you only get answers from what your role may read.

- **Quick** for short answers, **Deep** for long documents and analysis (uses more of the monthly AI limit).

Do — commands in plain words: “Create a deal for Skyline, 120 000, proposal, owner Anna, close Friday”, “Move the Delta build to testing and comment that the motors arrived”.

1. AI returns a **plan**: every record it will create or change, field by field.
2. You read it and press **Yes, do it** (or Change / Cancel).
3. The plan runs with *your* rights — if you can't change a section, AI can't either.

Voice — the microphone button types what you say, in your interface language.

What AI never does: delete, sign, pay, send an email to the outside, or show US-persons-only data to someone who is not a US person. Every AI request counts toward a personal monthly limit set by the owner.

Chapter 28

The automation engine: rules, modes, approval queue

Automation lives in **Administration** → **System** → **Automation**.

Rules — “when X happens, do Y”. A rule starts on one of three events:

- a record is **created** (new team member → onboarding checklist);
- a record **changes status** (deal *Won* → a build, an invoice and a notice to the team, all linked to the deal);
- a **date comes** (invoice due in 3 days → remind Finance; contract ends in 30 days → Legal).

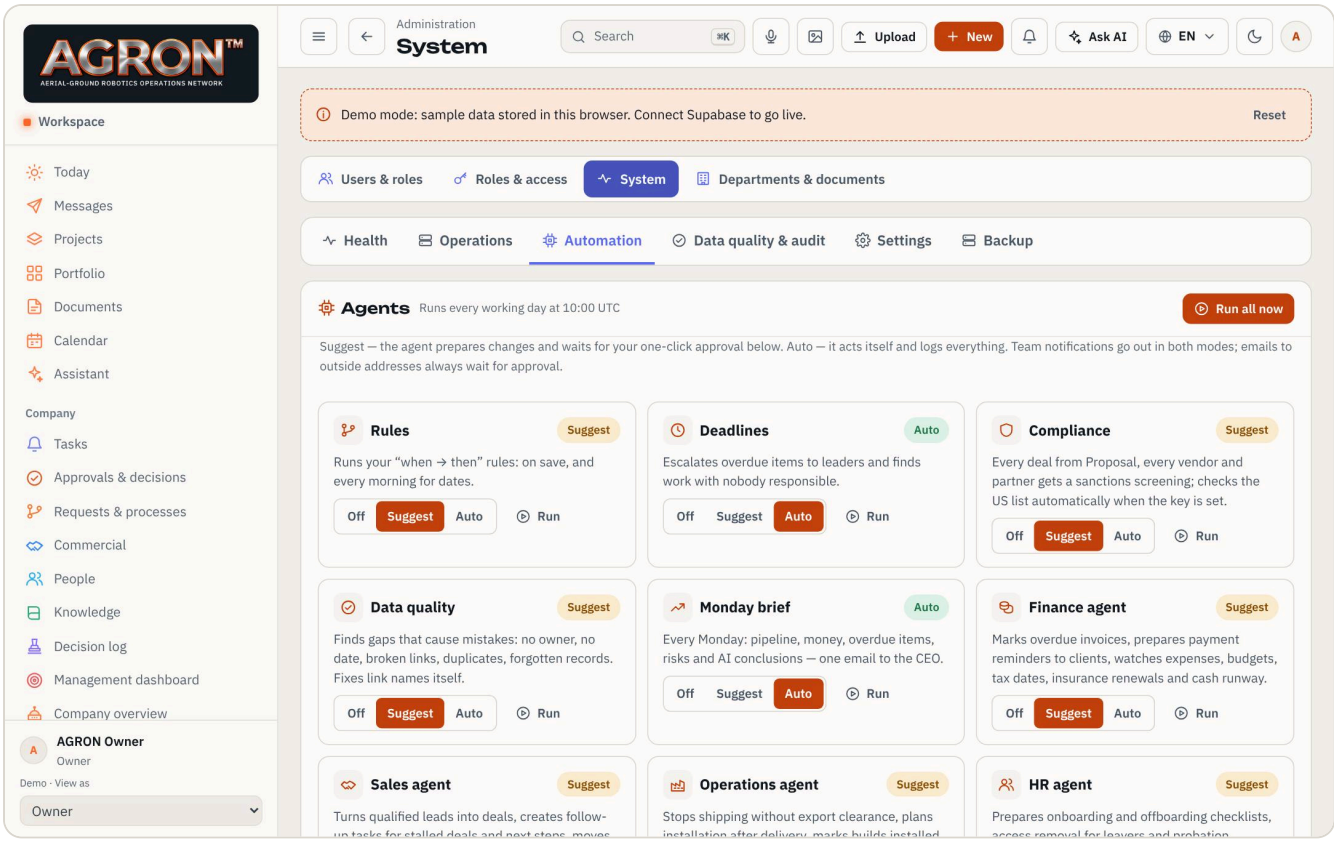

Actions: notify people or roles, create a linked record, set a field or status, draft an email, file a record. Nine ready rules come with Workspace; you can switch them, change them or add your own in the rule editor.

Modes — every agent and every rule is *Off*, *Suggest* or *Auto*:

- **Suggest** prepares the change and puts it in **Waiting for approval**. Nothing is changed until an owner or admin approves (one by one or *Approve all*). Drafted letters can be read and edited before approval.
- **Auto** acts at once and writes everything to the agent log.
- Team notifications go out in both modes. **Emails to outside addresses always wait for approval**, whatever the mode.

When it runs — rules on status and creation run within seconds of the save; date rules and agents run every working day at 10:00 UTC (weekends and company holidays are skipped); email intake every 15 minutes. **Run** starts one agent at once, **Run all now** — all of them.

Trust and control — the agent log shows every run, action and error; the audit trail shows each field automation changed. Agents never delete, sign, pay or publish.

"System" → "Automation": agents and modes

Chapter 29

The agents and what each one watches

For the whole company

- **Rules** — runs your rules (see the previous chapter).
- **Deadlines** — reminds owners before a date, and escalates to management after the set number of days overdue.
- **Compliance** — screenings waiting too long, expiring certificates, licences and registrations.
- **Data quality** — records with missing owner, status or key fields, duplicates and records nobody touched for months; suggests safe fixes.
- **Monday brief** — one short email to the owner every Monday: what moved, what is late, what needs a decision.
- **Email intake** — files incoming letters as records (see “Smart upload and email intake”).

One agent per department — Finance (invoices, payments, budgets), Sales (stalled deals, follow-ups, drafted client letters), Operations (builds, vendors, shipping and service), HR (onboarding, reviews, documents), Legal (contracts, renewals, NDAs), Marketing (release checks, publishing calendar, campaigns), Technical (tests, specs, technical-data classification) and Security (incidents, access reviews, cyber risks).

Where to see them

- Each department **Overview** shows its agent's card: what it sees right now, with the reason and a button to the record.
- Administration → System → Automation: mode, last run, *Run* and the log for every agent.

Agents only read what is in Workspace and only propose or make the changes listed above. The department card is shown with the viewer's own rights, so nobody sees findings about records they can't open.

Chapter 30

Emails, notifications and their timing

What arrives and when (UTC)

When	What	Who
Within seconds	Notice from a rule or agent, @mention, approval request	The people or roles named in it
Every day 10:00	Agents run; monitoring of sites, certificates and email protection	Monitoring email only if something is wrong: owner, admin, security
About 8:00 your time	**Morning digest** — your approvals, overdue items, deadlines, tasks	Everyone with something on the list
Monday	**Monday brief**; automatic backup	Owner
1st of the month	All department reports for the past month	Owner, admin, management

Rules for letters

- Mail is sent from the company address with the AGRON™ logo, in **each person's own language** (the one chosen in the top bar); a reply goes to a person, not to a robot.
- Letters to **clients, vendors or any outside address** are drafts until a person approves them.
- US-persons-only records never appear in letters to people who are not US persons, and never in monthly reports.
- Who gets which email is set by the owner in System → Settings → Notifications; the morning digest can be switched off there.

Chapter 31

Management dashboard

Company → Management dashboard (owners, administrators and management) shows the operational condition of the company on one screen: active projects, open and overdue tasks, approvals waiting (and those waiting 3 days or more), proposed decisions, delayed milestones, work awaiting review and work completed in the period.

- **Projects**: status, manager, progress, overdue tasks, next milestone and target date — the late ones first.
- **People who may need help**: two or more overdue tasks, or more than eight open ones. It is a prompt to talk, not a score.
- **Workload** by employee and by department; **milestones** delayed and coming; **important decisions**; **recent changes**.
- Filter by department, project, employee and period (7, 30 or 90 days). **Export summary (CSV)** gives the same numbers for a report.

Every number opens the records behind it, and you see only records you may open yourself.

Chapter 32

Reports, KPIs and the dashboard

- **Dashboard** — company numbers at a glance: pipeline, revenue, builds in work, open risks. Every number opens the records behind it.
- **Department overview** — the department's own KPIs, charts, the agent card and a **Report** button: a ready report for the month or quarter that can be printed or saved as PDF.
- **Reports → Get a report** — three steps: choose a report, set the period, generate; then download PDF or Excel, print or email it.
- **Monthly email** — on the 1st every department report goes to owners, administrators and management automatically.

Why numbers can differ from expectations — reports count only records you are allowed to see, and only by their current status. A deal with a wrong status is counted wrongly: keeping statuses true is what makes reports right. The Data quality agent shows the records that spoil the numbers.

Chapter 33

Marketing: channels, calendar, brand center

- **Channels** — every social account, site and media profile in one board; import monthly statistics from a platform's CSV export, and see the change month to month.
- **Publishing calendar** — posts, articles, interviews, videos and events by date. A material can be published only after the **release check** (text approved, no export-controlled data, rights to images).
- **Brand center** — approved texts (company description, boilerplate, product lines), logos and colors. AI drafts for letters and posts are written from these approved texts, so the company always speaks in one voice.
- **Logo** — the main logo is **AGRON™** with the line *Aerial-Ground Robotics Operations Network* under it; the short form without the line is for small places (icons, avatars). Always with ™, never stretched or recolored. Download the files in Brand center.
- **Campaigns and budget** — plan, approval, spend against budget; the Marketing agent warns before a campaign goes over.

Chapter 34

Security, backups and data quality

How data is protected

- Encrypted connection everywhere; data stored in the USA; files only by personal, expiring links.
- Access is checked by the database for every request (row-level security), not only by the screen.
- Strict browser security headers; sign-in sessions expire; every sign-in and download is logged.
- AI receives only what your role may read, and US-persons-only content only for US persons.

Backups (Administration → System → Backup)

- **Automatic — every day at 09:00 UTC**: all data and every attached file, encrypted with the backup password and stored outside Workspace. Each copy is read back and checked before it counts. Kept: 14 daily, 8 weekly, 12 monthly copies. Without the backup password nothing is written and administrators are told. The screen shows *Encrypted*, *Off-site* and *checked* for every copy, and the time of the last restore drill.
- **Back up now** — an extra copy at any moment.
- **Local copy on this computer** — one ZIP with all data and, if chosen, all files; with a password it becomes an encrypted *.agronbackup* file. Keep the password separately: without it the copy cannot be opened. A copy with export-controlled records must stay on a protected device used by US persons.
- **Open or restore a backup** puts back only records and comments that no longer exist; nothing current is overwritten.

Data quality & audit (System → Data quality) — missing fields, duplicates, stale records, with one-click safe fixes; and the full audit trail of who changed what and when.

Chapter 35

Reliability: conflicts, offline work, two-step sign-in, operations

Two people edit the same record

- Every record has a version. If someone saved it while you were editing, your save is not lost and does not overwrite theirs.
- Changes to different fields are combined by themselves. For a field you both changed, a window shows **Mine** and **Saved meanwhile** side by side; pick one per field and press **Save my choice** (or **Keep theirs everywhere**). The history keeps who changed what.

Without a connection

- A bar at the top says *No connection*: keep working, changes wait on this device and are sent by themselves when the connection is back.
- If a colleague changed the same record meanwhile, parts that do not overlap merge automatically; for an overlap the bar offers **Keep mine** or **Keep theirs**.

Two-step sign-in (My profile → Two-step sign-in)

- Scan the QR code with an authenticator app (Google Authenticator, Microsoft Authenticator, 1Password…) and enter the 6-digit code. From then on each sign-in asks for a fresh code.
- When the owner turns on **Require two-step sign-in**, owners and administrators cannot open Workspace until it is set up. Lost phone: an administrator resets it in Administration → People.

Accounts and sessions (Administration → People, owners and administrators)

- **End sessions** signs a person out on every device at once. **Disable** closes the account completely; their records stay. New people join only by invitation — nobody can sign up alone.

Operations (Administration → System → Operations)

- Every background job (retries, email intake, SLA, calendar, digest, translation, backup, agents, monitor, recycle bin, reports) with its last run, result and the next one. A missed run is caught up automatically; **Run now** starts one by hand.
- Automatic actions are queued: a failed email or step is retried after 1, 4, 16 and 64 minutes, then stops and shows here with **Try again**. An email whose delivery is uncertain is never sent twice — you confirm whether it arrived.
- Requests are limited per person and per address, so a stuck script or a stranger cannot flood links, AI or email.

These controls protect the application. They do not by themselves make the hosting suitable for export-controlled technical data — that is a separate decision.

Chapter 36

System settings for the owner

Administration → **System** has five tabs:

- **Health** — status of the site, database, email, AI and scheduled jobs; which keys are configured (only “set / not set”, never the key itself).
- **Automation** — agents, modes, approval queue, rules and the agent log.
- **Data quality & audit** — problems in the data and the audit trail.
- **Settings** (owner only):
  - *Company* — name, time zone, currency, working days and holidays (agents skip non-working days).
  - *Thresholds* — days before a reminder, days overdue before escalation, when a deal counts as stalled, when a record counts as stale, how long a screening may wait.
  - *Notifications* — which roles get monitoring, monthly reports, the Monday brief and escalations; morning digest on/off.
  - *AI* — monthly company budget in dollars and the prices used to count it; the page shows this month's spending.
- **Backup** — see “Security, backups and data quality”.

Keys and passwords are never typed into Workspace. Service keys (email, AI, backup password, data sources) are stored only in the hosting settings by the owner; Workspace shows only whether each one is set.

Chapter 37

Using Workspace on a phone

- Open workspace.agron1.com in the phone browser and choose **Add to Home Screen** (iPhone: Share → Add to Home Screen; Android: menu → Install app). It then opens like an app.
- The menu is behind the ☰ button at the top; search and the AI assistant are in the top bar.
- Tables become cards; swipe the board left and right to see all statuses.
- Take a photo of a document and send it with **Smart upload** — AI fills the record from the photo.
- **Voice** in the assistant: press the microphone and say the command (“move the Delta build to testing”).
- Approvals work fully on the phone: open from the morning email or My day → Approve / Reject.

Chapter 38

When something does not work

What you see	Why	What to do
A section or record is missing	Your role has no access to it	Ask an administrator (Administration → Access)
“US persons only” instead of details	The record is export-controlled	Only a confirmed US person can open it — ask your manager
Status does not save, red message	A status gate: a check is not done	Do the check named in the message, then change the status
An agent did nothing	It is *Off*, today is a non-working day, or nothing matched	System → Automation: check the mode, press *Run*, read the agent log
A proposal waits and nothing changes	The agent is in *Suggest* mode	Approve it in Waiting for approval (or in My day)
No morning email	Nothing on your list, digest off, or it went to spam	Check My day; mark the company address as “not spam”
AI says the monthly limit is reached	Your personal AI limit for the month is used	Wait for the 1st or ask the owner to raise it
AI answer looks wrong	It used only records you can see, or the data is wrong	Open the cited records; fix the data; ask again with Deep
Arabic text runs the wrong way	Interface language is not Arabic	My profile → Language → العربية
Something else	—	Write to the administrator with the page address and a screenshot

Part 5

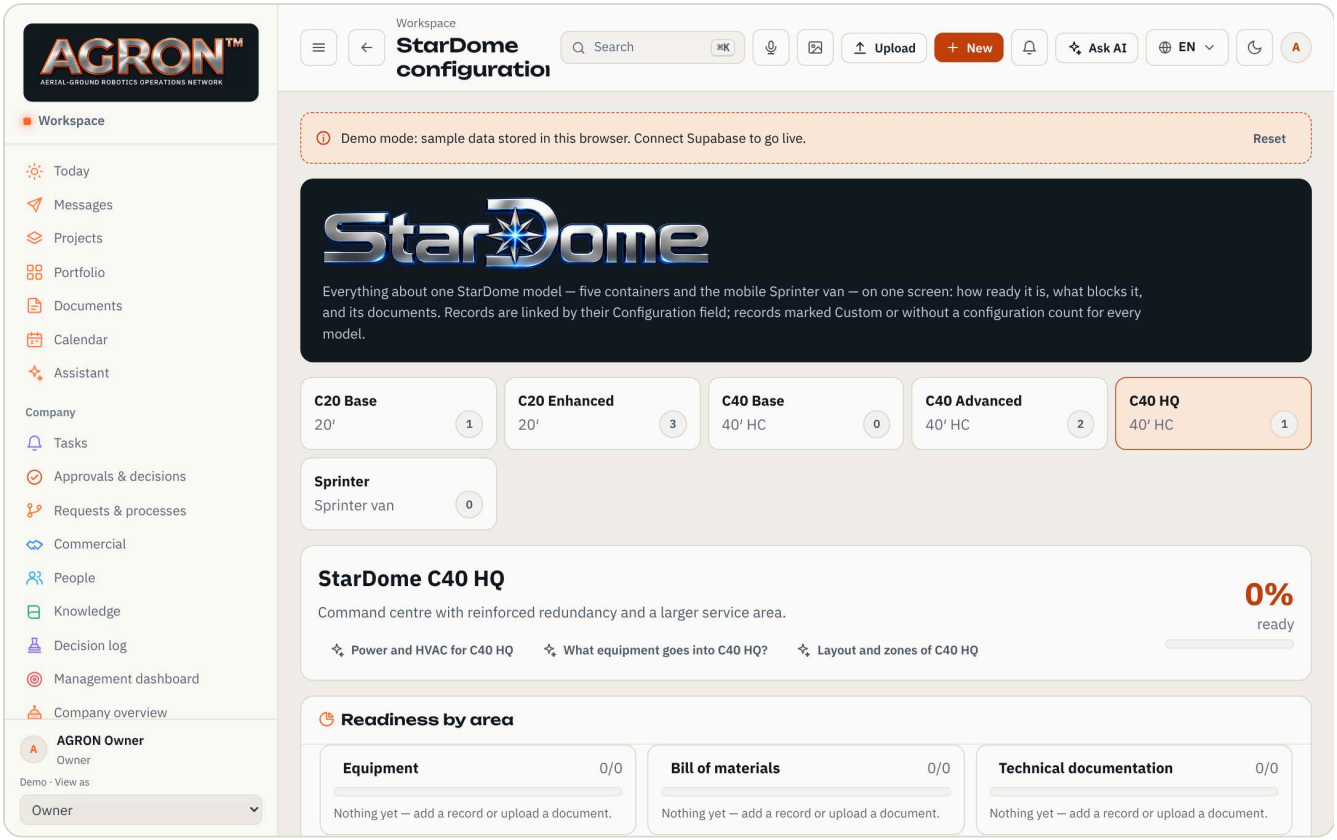

Departments and sections

Reference: every section — purpose, statuses, fields, access and approval.

01 Technical
02 Operations
03 Finance
04 Sales
05 Marketing
06 Security
07 Legal & compliance
08 HR
09 Knowledge base
10 Mail center

Chapter 39

StarDome configurations

"StarDome configurations": readiness of a model by area

The page gathers everything about one model: equipment, bill of materials (BOM), documentation, integration, testing, certification, engineering changes, costing, builds and installed units. Records are linked by the "StarDome configuration" field; records marked *Custom* or without a configuration count as shared by all models. Models: C20 Base, C20 Enhanced, C40 Base, C40 Advanced, C40 HQ, Sprinter.

Chapter 40

Technical

Technical: 17 sections. Can see: Management, Engineering, Operations, Security, Legal. Can change: Engineering.

Equipment

US

Catalogue of candidate equipment for the containers.

- One record per model: manufacturer, SKU, configuration, cost, lead time
- Link it to the compliance matrix by ID before selecting
- Status Selected = approved for the BOM

Statuses	**Candidate** › **Evaluating** › **Selected** › **Rejected**
Fields	Category · Manufacturer · Model / SKU · StarDome configuration · Technical specifications · Unit cost · Lead time · Compliance matrix ID · Notes
Can see	Management, Engineering, Operations, Security, Legal
Can change	Engineering
Export control	records of this section are US persons only by default

R&D

US

Research projects and prototypes.

- State the goal or hypothesis and budget
- Move through Idea → Research → Prototype → Validation
- Attach reports and test data as files

Statuses	**Idea** › **Research** › **Prototype** › **Validation** › **Done**
Fields	Goal / hypothesis · Owner · Budget · Due date · Document link (SharePoint) · Notes
Can see	Management, Engineering, Operations, Security, Legal
Can change	Engineering
Export control	records of this section are US persons only by default

Software development

US

Backlog of AGRON 1, StarDome device adapters and web work.

- Type: feature, bug, task or release
- Use the board for the sprint; link the GitHub issue
- Mark controlled if it contains technical data

Statuses	**Backlog** › **In progress** › **Review** › **Done**
Fields	Type · Component · Priority · Owner · Release · GitHub link · Notes
Can see	Management, Engineering, Operations, Security, Legal
Can change	Engineering
Export control	records of this section are US persons only by default

Equipment integration

US

Connecting each device to AGRON 1.

- Record protocol and SDK access (public, NDA, licensed)
- Attach the interface document (ICD)
- Integrated = adapter tested on the bench and in the container

Statuses	**Planned** › **Adapter in work** › **Bench tested** › **Integrated**
Fields	Device / model · Protocol · SDK / API access · Owner · Interface document (ICD) · Notes
Can see	Management, Engineering, Operations, Security, Legal
Can change	Engineering
Export control	records of this section are US persons only by default

Tests & trials

US

Lab, field and sea trials.

- One record per test: type, configuration, equipment, date
- Write the result in plain words, attach logs and photos
- Failed or Blocked tests need a follow-up action

Statuses	**Planned** › **Running** › **Passed** › **Failed** › **Conditional** › **Aborted** › **Blocked**
Fields	Number · Build unit · Test procedure (version) · Result · Test type · StarDome configuration · Equipment under test · Date · Owner · Result / findings · Document link (SharePoint)
Can see	Management, Engineering, Operations, Security, Legal
Can change	Engineering
Export control	records of this section are US persons only by default

Certification

Approvals each device needs before sale or operation.

- Scheme: FCC, TDRA, CE/RED, laser safety, class society
- Track the body, submission date and due date
- Attach certificates; Approved is valid only with the document

Statuses	**Not started** › **Submitted** › **In review** › **Approved** › **Rejected**
Fields	Scheme · Equipment / model · Authority / lab · Due date · Document link (SharePoint) · Notes
Can see	Management, Engineering, Operations, Security, Legal
Can change	Engineering

Technical documentation

US

Specifications, drawings, wiring, manuals, SOPs.

- Version every document; Released = current
- Old versions become Superseded, never deleted
- Controlled documents are visible to US persons only

Statuses	**Draft** › **In review** › **Released** › **Superseded**
Fields	Document type · StarDome configuration · Version · Owner · Document link (SharePoint)
Can see	Management, Engineering, Operations, Security, Legal
Can change	Engineering
Export control	records of this section are US persons only by default

Systems & monitoring

Every system the company runs on: Workspace, websites, GitHub, Vercel, Supabase, Google Workspace, AI and vendor portals.

- Open the system or its admin console in one click
- Check now: our server opens each health link and records status and response time
- GitHub repositories show the last commit, CI result and open issues

Statuses	**Operational** › **Degraded** › **Down** › **Unknown** › **Retired**
Fields	Type · Environment · Main link · Admin console · Health / status check URL · Provider · Plan / tier · Last check · Response time (ms) · Owner · Notes
Can see	Management, Engineering, Operations, Security
Can change	Engineering, Security

Engineering metrics

Monthly engineering numbers: deploys, incidents, uptime, open bugs, tasks closed, tests, response time.

- One record per month
- Shown on the Technical overview and in the Technical report

Statuses	**Draft** › **Final**
Fields	Month (YYYY-MM) · Production deploys · Incidents · Uptime, % · Open bugs at month end · Tasks closed · Tests passed · Tests failed · Average response time (ms) · Notes
Can see	Management, Engineering, Operations, Security, Legal
Can change	Engineering

IT & infrastructure

Company systems, licences, domains and hardware.

- Track vendor, owner, monthly cost and renewal date
- Renewal dates appear in Upcoming deadlines
- Retire unused services to cut cost

Statuses	**Active** › **Planned** › **Renewal due** › **Retired**
Fields	Type · Vendor · Owner · Renewal date · Monthly cost · Notes
Can see	Management, Engineering, Operations, Security
Can change	Engineering, Security

Bill of materials (earlier list)

US

Bill of materials per container configuration.

- One line per item: part number, quantity, unit cost, supplier
- The header shows the total of unit costs
- Only items cleared in the compliance matrix

Statuses	**Draft** › **Approved** › **Superseded**
Fields	StarDome configuration · Item · Part number · Quantity · Unit cost · Supplier · Compliance matrix ID · Notes
Can see	Management, Engineering, Operations, Security, Legal
Can change	Engineering
Export control	records of this section are US persons only by default

Engineering changes

Engineering change requests and orders (ECR/ECO).

- Describe the reason and impact: cost, schedule, compliance, safety
- Approved changes update BOM and documents
- Compliance impact goes to Legal before approval

Statuses	**Requested** › **Impact review** › **Technical review** › **Approval** › **Approved** › **Implementation** › **Verification** › **Documentation update** › **Closed** › **Rejected** › **Cancelled** › **Assessing** › **Implemented**
Fields	Number · StarDome configuration · Impact · Priority · Reason & description · Owner · Due date · Project · Impact record: what changes · Cost impact · Schedule impact, days · Affected configurations · Affected documents · Affected BOM items · Inventory and open purchases · Tests to repeat · Certification notes (written by a person) · Impact confirmed by
Can see	Management, Engineering, Operations, Security, Legal
Can change	Engineering
Approval	from Requested / Assessing → Approved (return → Rejected); decide: Owner, Administrator, Management

Products

Product families (C20, C40, Sprinter…) and their lifecycle.

- The unit code gives every build unit its number
- Lifecycle status is entered by people; a status never implies a certification or regulatory class

Statuses	**Concept** › **Development** › **Pilot** › **Active** › **Hold** › **Retired**
Fields	Product code · Product family · Description · Default unit of measure · Unit number code (e.g. C20 → AGR-C20-0001) · Product owner · Engineering owner · Manufacturing owner · Current approved configuration · Project · Notes
Can see	Management, Engineering, Operations, Procurement, Sales, Finance, Security, Legal
Can change	Engineering

Product configurations

US

Product configurations: the variant, its routing (work steps), required inspections, tests and documents.

- Draft → approval → Approved; an approved configuration is never edited — make a new version with a reason
- Units pin the version they were released with

Statuses	**Draft** › **Review** › **Approved** › **Superseded** › **Retired**
Fields	Configuration code · Version · Product · Name · Effective date · Owner · Project · BOM · Earlier version · Notes
Can see	Management, Engineering, Operations
Can change	Engineering
Export control	records of this section are US persons only by default

Item master

US

The item master: every part, assembly, material, tool, software and service (AGR-ITM-...).

- The AGRON number comes from the numbering; the manufacturer part number is kept apart
- Serialized and lot-controlled items are tracked one by one or by lot
- An entered US Persons Only classification restricts the item

Statuses	**Draft** › **Active** › **Hold** › **Obsolete**
Fields	Number · Manufacturer · Manufacturer part number · Description · Category · Unit of measure · Item type · Vendor · Lead time, days · Reference cost · Currency · Classification (entered, not inferred) · Serialized · Lot-controlled · Receiving inspection required · Critical material · Shelf life, days · Storage requirements · Notes
Can see	Management, Engineering, Operations, Procurement, Finance
Can change	Engineering, Operations, Procurement
Export control	records of this section are US persons only by default

BOM revisions

US

Bills of materials: multi-level, one revision per record (A, B, C…) of a configuration.

- The approval is for that exact revision and its line set; after approval a change is a new revision
- Effectivity says which units a revision applies to; completed units are never retrofitted
- Compare two revisions in Manufacturing → BOMs

Statuses	**Draft** › **Review** › **Approved** › **Superseded** › **Retired**
Fields	Number · Revision · Configuration · Change reason · Owner · Effective date · Engineering change · Lines · Notes
Can see	Management, Engineering, Operations
Can change	Engineering
Export control	records of this section are US persons only by default

Test procedures

US

Test procedures: the fields to record, their units and limits, and the equipment.

- Approved versions only are used; a run keeps the version it started with
- Pass or fail is the operator's recorded decision checked against the limits; a passing run needs a Test Approver

Statuses	**Draft** › **Review** › **Approved** › **Superseded** › **Retired**
Fields	Procedure code · Version · Category · Controlled document · Notes
Can see	Management, Engineering, Operations
Can change	Engineering
Export control	records of this section are US persons only by default

Chapter 41

Operations

Operations: 15 sections. Can see: Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement. Can change: Operations, Management.

Build units

US

Build units: one record per physical unit (AGR-C20-0001…), from Planned to Delivered.

- Release pins the approved configuration and the exact BOM revision; later revisions never change it silently
- Statuses follow the lifecycle in Manufacturing → Settings; a skipped prerequisite needs an authorised exception with a reason
- Open Manufacturing → the unit for BOM, materials, work, inspections, tests, As-Built, acceptance and shipping

Statuses	**Planned** › **Engineering** › **Material Planning** › **Procurement** › **Ready for Build** › **Assembly** › **Integration** › **Inspection** › **Testing** › **Rework** › **Acceptance** › **Ready for Shipment** › **Shipped** › **Delivered** › **Hold** › **Cancelled**
Fields	Number · Product · Configuration (pinned) · BOM revision (pinned) · Project · Organisation (party directory) · Target completion · Planned start · Build location · Shipment destination · Priority · Restricted build (team only) · Reason for the status (Hold, Cancelled) · Exception to the prerequisites (Build Manager) · Deal (linked) · Screening (linked) · StarDome configuration · Client · Site / vessel · Assembly location · Export / end-user check · Van VIN (Sprinter only) · End-user certificate · Owner · Due date · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Operations, Management
Status gate	Export and end-user check must be Cleared before shipping.
Export control	records of this section are US persons only by default

Work orders

US

Work orders: one step of the routing for one unit (AGR-WO-...).

- Each is pinned to the approved work instruction version current when it was made
- Start, follow the checklist, record what was used and installed, add photos, complete — on the shop floor (/build)
- Workspace lists work, not people's speed

Statuses	**Planned** › **Ready** › **In Progress** › **Blocked** › **Completed** › **Cancelled**
Fields	Number · Build unit · Operation · Assembly · Assigned to · Team · Planned date · Instructions · Required tools · Inspection after the work · Reason (Blocked, Cancelled) · Notes
Can see	Management, Engineering, Operations
Can change	Operations, Engineering, Management
Export control	records of this section are US persons only by default

Purchase requests

Purchase requests: something to buy, raised in Requests & processes.

- Each request gets a number and goes through technical review, quotations, vendor selection and approval
- The approval is for the exact amount and vendor; a change asks for a new approval
- The purchase record is created automatically after approval

Statuses	**Draft** › **Submitted** › **Technical review** › **Quotations** › **Vendor selection** › **Approval** › **Approved** › **Ordered** › **Receiving** › **Closed** › **Rejected** › **Cancelled**
Fields	Number · What is needed · Quantity · Estimated amount · Currency · Needed by · Why it is needed · Project · Department · Technical reviewer (optional) · Vendor · Notes · Selected quotation · Selected amount · Why this vendor · Approved amount · Purchase record
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement

Quotations

Quotations from vendors, each linked to a purchase request.

- Amount, currency, lead time, validity and terms
- Compared side by side in the request; the person choosing writes why
- Editing the amount of the chosen quotation makes its approval stale

Statuses	**Received** › **Under review** › **Selected** › **Not selected** › **Expired** › **Withdrawn**
Fields	Purchase request · Vendor · Amount · Currency · Lead time, days · Delivery date offered · Valid until · Payment terms · Delivery terms (Incoterms) · Document link (SharePoint) · Notes
Can see	Management, Engineering, Operations, Finance, Procurement
Can change	Management, Operations, Procurement

Procurement

Purchase orders for builds.

- Draft → Approved → Ordered → Received
- Link the build; vendors see only their own orders
- Email → Purchase order sends a branded PO

Statuses	**Draft** › **Approved** › **Ordered** › **Partially delivered** › **Delivered** › **Received** › **Cancelled** › **Closed**
Fields	Number · Purchase request · Vendor · Project · Received so far (accepted) · Ordered on · Build (linked) · Vendor · Item · Quantity · Amount · Currency · ETA · Rejected on receipt, units · For build · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement; external: Vendor
Can change	Operations, Management, Procurement
Approval	from Draft → Approved (return → Cancelled); decide: Owner, Administrator, Management

Receiving

Receiving records: what arrived, what was refused and in what condition.

- Recorded with “Receive goods” on the purchase record, never typed by hand
- Partial deliveries add up; refused or damaged goods open an issue and a follow-up task

Statuses	**Recorded** › **Discrepancy**
Fields	Purchase record · Arrived · Refused · Accepted · Condition · Received on · Received by · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Operations, Management, Procurement

Vendors & suppliers

Supplier register.

- Restricted-party screening must be Cleared before ordering
- Track NDA status
- Email → RFQ to request prices with export data

Statuses	**Prospect** › **Under review** › **Approved** › **Active** › **On hold** › **Inactive** › **Blocked**
Fields	Supplies · Country · Contact · Organisation (party directory) · NDA · Restricted-party screening · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement; external: Vendor
Can change	Operations, Management, Procurement

Inventory & serials (earlier list)

Stock by serial number.

- One record per serial; location and container
- Reserved = assigned to a build
- Installed units move to Installed base

Statuses	**In stock** › **Reserved** › **Installed** › **In repair** › **Returned**
Fields	Build (linked) · Part number · Serial number · Model · Location · Build / container · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Operations, Management

Logistics & customs

Shipments and customs.

- From/to, Incoterms, HS code, export licence or exception
- Attach invoice, packing list, B/L
- Email → Shipment notice to the client

Statuses	**Planned** › **Docs in prep** › **In transit** › **Customs** › **Delivered**
Fields	Container build (linked) · From · To · Incoterms · Carrier · Tracking / container / AWB number · HS code · Export licence / exception · Due date · Document link (SharePoint)
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Operations, Management

Installation & commissioning

Site work and commissioning.

- List approvals: port, marina, flag, class
- Commissioned = site acceptance signed
- Email → Commissioning & handover

Statuses	**Planned** › **Approvals** › **On site** › **Commissioned**
Fields	Container build (linked) · Site / vessel · Required approvals (port, flag, class) · Owner · Due date · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Operations, Management

Service & support

Client service tickets.

- Severity sets response time
- Partners see tickets for their clients
- Email the client on open and on resolve

Statuses	**New** › **In progress** › **Waiting client** › **Resolved**
Fields	Installed unit (linked) · Client / site · Severity · Owner · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement; external: Partner
Can change	Operations, Management

Announcements

Company announcements.

- Choose the audience; Published shows on the home page
- Set visibility * to show partners, vendors and investors

Statuses	**Draft** › **Published** › **Archived**
Fields	Audience · Message
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement; external: Partner, Vendor, Investor
Can change	Management, Operations, HR

Quality control & NCR

Inspections and non-conformances (NCR).

- Incoming, in-process, factory (FAT), site (SAT)
- Fail → Non-conformance → Corrective action → Closed
- Attach photos and the signed checklist

Statuses	**Planned** › **Inspection** › **Non-conformance** › **Corrective action** › **Closed**
Fields	Number · Inspection · Build unit · Work order · Item · Build / container · Check · Result · Date · Owner · Findings & corrective action · Document link (SharePoint)
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Operations, Management

Installed base & SLA

Every installed StarDome and its service plan.

- Serial, site, warranty end, next service
- Next service and warranty dates appear in deadlines
- Email → Scheduled maintenance

Statuses	**Active** › **Maintenance due** › **Warranty claim** › **Decommissioned**
Fields	Container build (linked) · Client · Site / vessel · StarDome configuration · Van VIN (Sprinter only) · Container serial · Commissioned · Warranty until · Service plan · Last service · Next service · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Operations, Management

Operations metrics

Monthly operations numbers: containers completed, on-time delivery, shipments, installations, support tickets, non-conformances, purchase orders: one record per month (YYYY-MM).

- Shown as KPIs with change vs last month on the department overview
- Used in the department report

Statuses	**Draft** › **Final**
Fields	Month (YYYY-MM) · Containers completed · On-time delivery, % · Shipments · Installations · Open support tickets · Average resolution, days · Open non-conformances · Purchase orders placed · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Operations, Management

Chapter 42

Finance

Finance: 11 sections. Can see: Management, Finance. Can change: Finance.

Budget

Planned vs actual by department and period.

- Over budget when actual exceeds plan
- Review monthly with management

Statuses	**Planned** › **Approved** › **Over budget** › **Closed**
Fields	Department · Period · Planned · Actual · Currency · Project · Category · Notes
Can see	Management, Finance
Can change	Finance
Approval	from Planned → Approved; decide: Owner, Administrator, Management

Expenses & approvals

Anyone submits an expense for approval.

- Attach the receipt
- Finance approves and marks Paid

Statuses	**Submitted** › **Approved** › **Rejected** › **Paid**
Fields	Project / deal (linked) · Requester · Category · Amount · Currency · Document link (SharePoint) · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Approval	from Submitted → Approved (return → Rejected); decide: Owner, Administrator, Management, Finance

Invoices & payments

Receivables and payables.

- Direction, counterparty, amount, due date
- Overdue items show in red
- Email → Invoice / Payment reminder

Statuses	**Draft** › **Sent** › **Due** › **Paid** › **Overdue**
Fields	Deal (linked) · Direction · Counterparty · Amount · Currency · Due date · Xero link
Can see	Management, Finance
Can change	Finance

Payment requests

Payment requests: a bill or invoice to pay.

- Review and approval by Finance (and Management above the limit)
- “Paid” only when Finance records the payment made in the bank: date, amount, bank reference
- No bank details, card numbers or passwords are kept here

Statuses	**Requested** › **Review** › **Approval** › **Ready for payment** › **Partially paid** › **Paid** › **Reconciled** › **Closed** › **Rejected** › **Cancelled**
Fields	Number · Pay to · Payee in the party directory · Amount · Currency · Due date · What it is for · Purchase record · Invoice · Project · Approved amount · Paid on (recorded by Finance) · Paid amount · Bank / finance-system reference
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement

Container costing

Cost and price per configuration.

- Equipment (BOM) + labour + logistics and compliance = cost
- Compare with sale price for margin

Statuses	**Draft** › **Reviewed** › **Approved**
Fields	StarDome configuration · Equipment (BOM) · Labour & integration · Logistics & compliance · Sale price · Notes
Can see	Management, Finance
Can change	Finance
Approval	from Draft / Reviewed → Approved; decide: Owner, Administrator, Management

Leasing & financing

Lease and financing deals.

- Structure: sale, operating or finance lease, subscription
- Sanctions screening is required for client and financier

Statuses	**Proposal** › **Under review** › **Signed** › **Active** › **Closed**
Fields	Client · Structure · Financier · Term (months) · Amount · Sanctions screening
Can see	Management, Finance
Can change	Finance

Investors & rounds

Investor pipeline and rounds.

- Contacted → Meeting → Due diligence → Committed
- Investors see only records shared with them
- Email → Investor update monthly

Statuses	**Contacted** › **Meeting** › **Due diligence** › **Committed** › **Closed** › **Declined**
Fields	Round · Amount · Currency · Contact · Notes
Can see	Management, Finance; external: Investor
Can change	Finance

Tax & reporting

Tax and filing calendar for US and UAE.

- One record per filing with due date
- Attach the filed return

Statuses	**Upcoming** › **In preparation** › **Filed**
Fields	Jurisdiction · Due date · Owner · Notes
Can see	Management, Finance
Can change	Finance

Cash-flow forecast

Monthly inflow and outflow.

- Forecast now, switch to Actual at month end
- Use for runway in investor updates

Statuses	**Forecast** › **Actual**
Fields	Month (YYYY-MM) · Inflow · Outflow · Currency · Notes
Can see	Management, Finance
Can change	Finance

Insurance

Company insurance policies.

- Product liability, marine cargo, cyber, D&O and others
- Renewal dates appear in deadlines; attach the policy

Statuses	**Quote** › **Active** › **Renewal due** › **Expired**
Fields	Policy type · Insurer / broker · Coverage limit · Annual premium · Renewal date · Document link (SharePoint)
Can see	Management, Finance
Can change	Finance

Monthly financials

Monthly financials: revenue, expenses, cash, net burn, receivables, payables, overdue invoices: one record per month (YYYY-MM).

- Shown as KPIs with change vs last month on the department overview
- Used in the department report

Statuses	**Draft** › **Final**
Fields	Month (YYYY-MM) · Revenue · Expenses · Cash at month end · Net burn · Receivables · Payables · Invoices overdue · Notes
Can see	Management, Finance
Can change	Finance

Chapter 43

Sales

Sales: 9 sections. Can see: Management, Sales, Finance, Legal, Operations. Can change: Sales, Management.

Opportunities

US

Opportunities: every possible sale, from New to Won, Lost or On Hold.

- Each gets a number (AGR-OPP-...), one owner and a next action with a date
- Stage rules come from Commercial → Settings; missing information is never invented — an authorised exception needs a reason
- Values keep their currency and their history; weighted pipeline is a management estimate, not revenue
- Restricted opportunities are seen only by the owner, the team, the people listed and management

Statuses

New › Qualified › Discovery › Technical › NDA / Information Exchange › Proposal › Negotiation › Decision › Won › Lost › On Hold

Fields

Number · Organization · Primary contact · AGRON owner · Supporting AGRON team · Source · Introduced by (organization) · Introduced by (person) · Geography · Product · Use case · Priority · Estimated value · Currency · Quoted value (sent proposal) · Approved proposal value · Negotiated value · Final agreed value · Why the value changed (kept in history) · Probability, % (manual estimate) · Expected decision · Expected close · Next action · Next action — who · Next action — by · Waiting for (outside AGRON) · Waiting since · Status reason · Competitors (as entered) · Real requirement identified · Product / use case fit · Decision maker known · Budget known · Timeline known · Technical discussion required · NDA required · Procurement path known · Next step defined · NDA · NDA contract · Project (when won) · Decision evidence (when Won) · Why lost (when Lost) · Loss details · Lost on · Marked lost by · Why on hold (when On Hold) · Review on (On Hold) · Exception to the stage rules (reason) · Technical support by · Local support by · Commercial support by · Relationship support by · Restricted: only the owner, the team, people added below and management · Also allowed to open (restricted) · Client (older records) · Lead (linked) · Client · Segment · StarDome configuration · Country of use · Sanctions & end-user screening · Notes

Can see	Management, Sales, Finance, Legal, Operations
Can change	Sales, Management
Status gate	A deal can be marked Won only after sanctions and end-user screening is Cleared.
Export control	records of this section are US persons only by default

Clients

Client companies, vessels and sites.

- Record flag state and vessel or site
- Screen in Security → Restricted-party screening

Statuses	**Prospect** › **Active** › **Former**
Fields	Language for letters · Segment · Country · Contact · Vessel / site · Flag state · Notes
Can see	Management, Sales, Finance, Legal, Operations
Can change	Sales, Management

Proposals & quotes

US

Commercial proposals, one record per version (V1, V2…) under one number.

- Draft → submitted for approval → Approved only through the approval process, never because the author created it
- Sent only after approval; a sent proposal is never replaced — a change is a new version
- Amount, currency, discount, validity and the document version are kept with each version

Statuses	**Draft** › **Internal Review** › **Approved** › **Sent** › **Revised** › **Accepted** › **Rejected** › **Expired** › **Superseded**
Fields	Opportunity · Proposal number (given by Workspace) · Version · Replaces version · Organization · AGRON owner · Proposal date · Proposal document (Document Center) · Document version of this proposal · Sent on · Approved on · Client · StarDome configuration · Quantity · Unit price · Discount, % · Value · Currency · Lease per month · Payment terms · Delivery · Valid until · Language · Document link (SharePoint) · Notes
Can see	Management, Sales, Finance, Legal, Operations; external: Partner
Can change	Sales, Management
Approval	from Draft → Approved (return → Draft); decide: Owner, Administrator, Management
Export control	records of this section are US persons only by default

Partners & distributors

Distributors, integrators and referral partners.

- Agreement type and screening status
- Email → Partner onboarding gives workspace access

Statuses	**Prospect** › **Onboarding** › **Active** › **Paused**
Fields	Region · Contact · Agreement · Screening · Notes
Can see	Management, Sales, Finance, Legal, Operations; external: Partner
Can change	Sales, Management

Calls, notes & emails

US

Calls, e-mails, meetings, demos and visits with customers and partners.

- Link each to its opportunity, organisation or contact; it then appears in their timelines without copies
- Write the outcome and the next step right after
- A meeting does not move the opportunity's stage by itself

Statuses	**Planned** › **Done** › **Cancelled**
Fields	Opportunity · Organization · Contact · Client · Type · Date · Owner · Outcome · Next step
Can see	Management, Sales, Finance, Legal, Operations
Can change	Sales, Management
Export control	records of this section are US persons only by default

Introductions & referrals

US

Who introduced whom: a partner, agent, advisor, customer or person who brought us an organisation or an opportunity.

- Recorded on the lead and kept through conversion
- Attribution is a fact; no commission is calculated and no obligation is created
- A partner or agent sees no opportunity unless it is explicitly shared

Statuses	**Recorded** › **Archived**
Fields	Introduced organization · Introduced person · Introducer is · Introduced by (organization) · Introduced by (person) · Introduced by (AGRON employee) · Introduction date · Context · Opportunity · AGRON owner · Notes
Can see	Management, Sales, Finance, Legal, Operations
Can change	Sales, Management
Export control	records of this section are US persons only by default

Tenders & RFPs

Public and private tenders.

- Deadline appears in Upcoming deadlines
- Attach tender documents and the submission

Statuses	**Identified** › **Preparing** › **Submitted** › **Shortlisted** › **Awarded** › **Lost**
Fields	Buyer / authority · Country · Estimated value · Currency · Submission deadline · Tender portal · Owner
Can see	Management, Sales, Finance, Legal, Operations
Can change	Sales, Management

Price list

Official prices per configuration.

- Finance and management edit; sales and partners read
- Only Active prices go into proposals

Statuses	**Draft** › **Active** › **Retired**
Fields	StarDome configuration · List price · Lease per month · Currency · Valid until · Notes
Can see	Management, Sales, Finance; external: Partner
Can change	Management, Finance

Sales metrics

Monthly sales numbers: qualified leads, meetings, proposals, deals won and lost, open pipeline: one record per month (YYYY-MM).

- Shown as KPIs with change vs last month on the department overview
- Used in the department report

Statuses	**Draft** › **Final**
Fields	Month (YYYY-MM) · New qualified leads · Client meetings · Proposals sent · Value of proposals sent · Deals won · Value won · Deals lost · Open pipeline at month end · Notes
Can see	Management, Sales, Finance, Legal, Operations
Can change	Sales, Management

Chapter 44

Marketing

Marketing: 16 sections. Can see: Management, Marketing, Sales. Can change: Marketing.

Channels & accounts

Every company account: LinkedIn, X, YouTube, Instagram, Facebook, the website and analytics tools.

- Profile link and analytics page open in one click
- Add numbers by hand, import the platform's CSV export, or update YouTube from its API
- Note who has admin access and whether two-step verification is on

Statuses	**Planned** › **Active** › **Paused**
Fields	Platform · Account name / handle · Profile link · Analytics / admin page · How statistics arrive · Channel / page ID (for API) · Followers / subscribers · Followers as of · Who has admin access · Two-step verification · Owner · Notes
Can see	Management, Marketing, Sales
Can change	Marketing

Channel statistics

Monthly numbers per channel: followers, impressions, reach, engagements, clicks, video views, website sessions, leads.

- One record per channel and month; CSV import fills them automatically
- Feeds the Channels board, the Marketing overview and the Marketing report

Statuses	**Draft** › **Final**
Fields	Platform · Account · Month (YYYY-MM) · Followers at month end · New followers · Posts / videos published · Impressions · Reach (unique) · Engagements · Clicks · Video views · Website sessions · Leads · Source · Notes
Can see	Management, Marketing, Sales
Can change	Marketing

Plan & budget

Goals and budget for marketing by quarter.

- One line per goal or budget line, by area
- Planned vs spent shows on the Marketing overview
- Send budget lines for approval

Statuses	**Planned** › **Approved** › **Active** › **Done**
Fields	Type · Quarter / period · Area · Planned budget · Spent · Currency · Target (KPI) · Result · Owner · Notes
Can see	Management, Marketing, Finance
Can change	Marketing, Management
Approval	from Planned → Approved; decide: Owner, Administrator, Management

Brand center

The single source of how AGRON speaks and looks.

- Company description, key messages, approved claims, “Do not say”, tone, bios, logos
- Approved items are used by every AI writing button
- Everyone in the company can read it

Statuses	**Draft** › **Approved** › **Retired**
Fields	Type · Language · Text / rule · Where and how to use · Document link (SharePoint) · Owner
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement; external: Partner
Can change	Marketing, Management
Approval	from Draft → Approved; decide: Owner, Administrator, Management

Social media

Posts for LinkedIn, X, YouTube, Instagram and others.

- Idea → Draft → Review → Approved → Scheduled → Published
- “Write the post”, then “Compliance check”: Approved needs a passed check
- After publishing paste the link and the reach

Statuses	**Idea** › **Draft** › **Review** › **Approved** › **Scheduled** › **Published**
Fields	Channel · Account · Publish date · Topic type · Product · Audience segment · Language · Post text · Hashtags · Image or video link · Based on · Compliance check · Check notes · Published post link · Reach / impressions · Reactions, comments, shares · Clicks · Owner
Can see	Management, Marketing, Sales
Can change	Marketing
Approval	from Draft / Review → Approved (return → Draft); decide: Owner, Administrator, Management
Status gate	Run the compliance check first: “Passed (AI check)” or “Cleared by legal” is needed before Approved or Published.

Press & publications

Magazines, trade press and press releases.

- Target → Pitched → Accepted → Writing → Review → Approved → Published
- “Write the pitch” for the editor, “Write the article” for the text
- Editor deadlines go to your phone calendar

Statuses	**Target** › **Pitched** › **Accepted** › **Writing** › **Review** › **Approved** › **Published** › **Declined**
Fields	Magazine / outlet · Format · Topic / angle · Product · Audience segment · Language · Editor deadline · Publish date · Pitch to the editor · Draft text · Compliance check · Check notes · Published link · Audience (readers) · Owner
Can see	Management, Marketing, Sales
Can change	Marketing
Approval	from Writing / Review → Approved (return → Writing); decide: Owner, Administrator, Management
Status gate	Run the compliance check first: “Passed (AI check)” or “Cleared by legal” is needed before Approved or Published.

Interviews & podcasts

Podcasts, interviews, panels and webinars.

- Target → Requested → Confirmed → Preparing → Approved → Recorded → Published
- “Write the guest pitch”, then “Prepare for the interview”: questions, safe answers, topics to avoid
- Recording dates go to your phone calendar

Statuses	**Target** › **Requested** › **Confirmed** › **Preparing** › **Approved** › **Recorded** › **Published** › **Declined**
Fields	Type · Show / outlet · Host / journalist · Our speaker · Recording date · Publish date · Language · Guest pitch · Agreed topics · Preparation pack: questions and answers · Compliance check · Check notes · Recording link · Audience (listeners / viewers) · Owner
Can see	Management, Marketing, Sales
Can change	Marketing
Approval	from Confirmed / Preparing → Approved; decide: Owner, Administrator, Management
Status gate	Run the compliance check first: “Passed (AI check)” or “Cleared by legal” is needed before Approved or Published.

Media & podcast list

Our list of magazines, podcasts and editors to work with.

- Type, topic, country, audience, editor or host
- Move to In contact and Relationship as you build ties
- Use names from here in Press and Interviews

Statuses	**To research** › **To contact** › **In contact** › **Relationship** › **Not relevant**
Fields	Type · Main topic · Country · Language · Audience size · Editor / host · Email · Website · Last contact · Notes · Owner
Can see	Management, Marketing, Sales
Can change	Marketing

Video

Presentation, advertising, demo and social videos.

- Brief → Script → Shooting → Editing → Review → Approved → Published
- “Brief and script” writes both; then check and approve the final cut
- Keep video files on YouTube, Vimeo or Drive and paste the link here

Statuses	**Brief** › **Script** › **Pre-production** › **Shooting** › **Editing** › **Review** › **Approved** › **Published**
Fields	Video type · Product · Audience segment · Where it will be shown · Length (seconds) · Language · Production partner · Budget · Currency · Final cut due · Publish date · Brief · Script and storyboard · Compliance check · Check notes · Video link (YouTube, Vimeo, Drive) · Views · Owner
Can see	Management, Marketing, Sales
Can change	Marketing
Approval	from Editing / Review → Approved (return → Editing); decide: Owner, Administrator, Management
Status gate	Run the compliance check first: “Passed (AI check)” or “Cleared by legal” is needed before Approved or Published.

Presentations & sales kit

Presentations, one-pagers, brochures, case studies, images and logos for sales.

- Upload files (up to 50 MB) or add a link
- “Draft the content” gives a slide-by-slide outline; check, then approve
- Approved = ready to send; partners see items shared with their company
- Email any item: links stay valid 7 days

Statuses	**Draft** › **Review** › **Approved** › **Archived**
Fields	Type · Product · Audience · Audience segment · Languages · Version · External link (YouTube, Drive, website) · Tags · Content / outline · Compliance check · Check notes · Owner · Notes
Can see	Management, Marketing, Sales; external: Partner
Can change	Marketing
Approval	from Draft / Review → Approved (return → Draft); decide: Owner, Administrator, Management
Status gate	Run the compliance check first: “Passed (AI check)” or “Cleared by legal” is needed before Approved or Published.

Advertising & campaigns

Email campaigns and paid ads.

- Channel, goal, audience, dates, budget
- “Write the copy”, check it, approve, then run
- Record spent, clicks, leads and meetings

Statuses	**Draft** › **Approved** › **Running** › **Completed** › **Analyzed**
Fields	Channel · Goal · Audience / list · Audience segment · Start · End · Email template / ad copy · Copy: email or ad text · Landing page · Budget · Spent · Currency · Impressions · Clicks · Emails sent · Replies · Leads · Meetings booked · Compliance check · Check notes · Owner
Can see	Management, Marketing, Sales
Can change	Marketing
Approval	from Draft → Approved; decide: Owner, Administrator, Management
Status gate	Run the compliance check first: “Passed (AI check)” or “Cleared by legal” is needed before Approved or Published.

Events & speaking

Exhibitions, conference talks, panels and demos.

- Event date and booking deadline go to your phone calendar
- “Write the abstract” for a talk or the booth message
- After the event record leads and meetings

Statuses	**Considering** › **Applied** › **Booked** › **Preparing** › **Done** › **Cancelled**
Fields	Type · City · Country · Event date · Registration / booth deadline · Our speaker / team · Budget · Currency · Leads collected · Meetings held · Talk abstract / booth message · Event website · Owner · Notes
Can see	Management, Marketing, Sales
Can change	Marketing

Leads

Leads: first contacts from the website, e-mail, events (IDEX), partners and introductions.

- New → Reviewing → Qualified → Converted, or Disqualified with a reason
- Every lead has an owner and a follow-up date; possible duplicates are shown, never merged automatically
- Convert creates (or reuses) the organisation, the contact and the opportunity in one step

Statuses	**New** › **Reviewing** › **Qualified** › **Disqualified** › **Converted**
Fields	Source · Event · First name · Last name · Contact · Title · Organization · Email · Phone · Country · Geography · Interest · Product · Use case · Importance · Priority · AGRON owner · Next action · Follow up by · Introduced by · Introduced by (organization) · Meeting · Organization (after conversion) · Contact (after conversion) · Opportunity (after conversion) · Audience segment · Tags · Notes
Can see	Management, Marketing, Sales
Can change	Marketing, Sales, Management

Agencies & freelancers

PR agencies, video studios, designers, translators and freelancers.

- Service, rate, agreement, sanctions screening
- Sign an NDA before sharing anything not public
- Rate their work after each job

Statuses	**Candidate** › **Active** › **Paused** › **Ended**
Fields	Service · Contact · Email · Country · Rate / price · Agreement · Sanctions screening · Portfolio · Rating · Owner · Notes
Can see	Management, Marketing, Finance
Can change	Marketing, Management

Websites

Work on agron1.com, stardome.life and the workspace.

Statuses	**Backlog** › **In progress** › **Live**
Fields	Site · Owner · Due date · Document link (SharePoint) · Notes
Can see	Management, Marketing, Sales
Can change	Marketing

Competitors & market

Competitor and market notes.

- Products, pricing, strengths and weaknesses
- Use in proposals and pitch

Statuses	**Watching** › **Analyzed** › **Archived**
Fields	Company · Country · Products & offer · Pricing · Strengths / weaknesses · Website
Can see	Management, Marketing, Sales
Can change	Marketing

Chapter 45

Security

Security: 8 sections. Can see: Management, Security, Legal. Can change: Security.

Technology control plan

US

Technology control plan: where controlled data lives and who can access it.

- One record per data set or technology
- Classification: EAR, ITAR or not controlled (counsel decides)

Statuses	**Unclassified** › **Under review** › **EAR controlled** › **ITAR controlled** › **Not controlled**
Fields	Data / technology · Where stored · Who has access · Owner · Notes
Can see	Management, Security, Legal
Can change	Security
Export control	records of this section are US persons only by default

Access reviews

Periodic review of who has access to each system.

- Quarterly; remove leavers the same day

Statuses	**Scheduled** › **In review** › **Done**
Fields	System · Owner · Due date · Notes
Can see	Management, Security, Legal
Can change	Security

Cybersecurity

Cyber risks and controls.

- Risk level, asset, mitigation, owner

Statuses	**Open** › **Mitigating** › **Accepted** › **Closed**
Fields	Risk · Asset · Control / mitigation · Owner
Can see	Management, Security, Legal
Can change	Security

Facilities & sites

Offices, workshops and sites and their protection.

Statuses	**Planned** › **Active** › **Closed**
Fields	Location · Security measures · Owner
Can see	Management, Security, Legal
Can change	Security

Incidents

Anyone reports an incident here.

- What happened, when, severity
- Security investigates and closes

Statuses	**Reported** › **Investigating** › **Resolved**
Fields	Severity · Date · What happened · Owner
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement

Restricted-party screening

Restricted-party screening log.

- Screen clients, vessels (IMO), owners, financiers, vendors, partners
- Record lists checked and attach evidence
- Flagged → stop and escalate to Legal

Statuses	**Pending** › **Cleared** › **Flagged** › **Escalated**
Fields	Deal (linked) · Party name · Party type · Country · IMO / registration no. · Lists checked · Screening date · Result & evidence · Owner
Can see	Management, Security, Legal, Sales, Finance, Operations
Can change	Security, Legal, Sales

Audits & compliance programme

Audits and the compliance programme.

- Standard, area, findings, owner

Statuses	**Planned** › **In progress** › **Findings open** › **Closed**
Fields	Standard · Area · Date · Findings · Owner
Can see	Management, Security, Legal
Can change	Security

Security metrics

Monthly security numbers: two-step verification coverage, screenings, matches, incidents, phishing test, overdue patches, access reviews, training: one record per month (YYYY-MM).

- Shown as KPIs with change vs last month on the department overview
- Used in the department report

Statuses	**Draft** › **Final**
Fields	Month (YYYY-MM) · Two-step verification coverage, % · Screenings done · Screening matches · Security incidents · Phishing test failures, % · Critical patches overdue · Access reviews done · Security training completed, % · Notes
Can see	Management, Security, Legal
Can change	Security

Chapter 46

Legal & compliance

Legal & compliance: 21 sections. Can see: Management, Legal, Security, Finance, Engineering, Operations, Sales. Can change: Legal, Management.

Legal desks (AI)

US

13 AI legal desks, each a specialist for one area of US and UAE law, plus saved memos.

- Pick a desk, ask or use a ready question; answers are preliminary
- Save the answer as a memo; counsel marks it Counsel confirmed
- Risk map shows the matrix by category and risk

Statuses	**Draft** › **Under review** › **Counsel confirmed** › **Superseded**
Fields	Desk · Question · Memo (AI, preliminary) · Related record · Reviewed by counsel · Date verified
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Export control	records of this section are US persons only by default

Legal requests

Anyone asks Legal for help here.

- Choose the desk, priority and due date, describe what is needed
- “Ask AI” drafts the answer with that desk; save it into the request
- Answered → Closed after counsel confirms when needed

Statuses	**New** › **Triage** › **In progress** › **Waiting info** › **Answered** › **Closed**
Fields	Desk · Requested by · Priority · Due date · What is needed · Answer / outcome · Jurisdiction · Owner
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement

Equipment compliance matrix

403 equipment items with every field from the Master Equipment List, grouped A–G, plus US (30) and UAE (35) checklists.

- Filter by risk; Restricted and Prohibited need counsel
- “AI review A–G” drafts the full item review; save it into the record
- ECCN, ITAR and permits stay Pending until a source or counsel confirms

Statuses	**Pending review** › **Under review** › **Verified (preliminary)** › **Counsel approved** › **Restricted** › **Prohibited**
Fields	Equipment ID · Category · Subcategory · Manufacturer · Model / SKU · Country of origin · Quantity · StarDome configuration · Intended application · Technical specifications · Operating frequency · Transmit power · Laser class · Battery chemistry · Software / firmware · API / SDK availability · ECCN · EAR99 status · ITAR jurisdiction · US export licence required · Licence exception · US export authority · Encryption classification · Classification source · Manufacturer classification document · US required documents · HS / HTS code · UAE import permit required · UAE regulatory authority · UAE type approval · UAE restricted / strategic goods · UAE required documents · UAE operating authorization · Installation authorization · Frequency authorization · Operator licence · Testing permission · Maritime / land requirements · Supplier · Purchasing channel · Price · Lead time · Shipping method · Dangerous goods (UN no.) · Warranty and support limits · Legal risk level · Legal uncertainty · End user · End use · Authority confirmation required · Recommended next action · Review areas · Source of verification · Last verified · Responsible reviewer · AI review A–G (preliminary) · Notes
Can see	Management, Legal, Security, Finance, Engineering, Operations, Sales
Can change	Legal, Management

Critical issues

Key legal questions for the company.

- Priority, why it matters, next action, owner

Statuses	**Open** › **In progress** › **Resolved**
Fields	Priority · Why it matters · Next action · Owner
Can see	Management, Legal, Security, Finance, Engineering, Operations, Sales
Can change	Legal, Management

Contracts

All agreements.

- Type, counterparty, governing law
- Tick end-user and re-export clauses
- Attach the signed copy

Statuses	**Request** › **Drafting** › **Internal review** › **Counterparty review** › **Approval** › **Signature** › **Active** › **Renewal** › **Expired** › **Closed** › **Rejected** › **Cancelled** › **Counsel review** › **Negotiation** › **Signed**
Fields	Number · Deal (linked) · Type · Counterparty · Governing law · End-user & re-export clauses included · Change of contract value (change order, + or –) · Currency · Schedule impact, days · Scope of the change · Due date · Document link (SharePoint) · Contract document (Document Center) · Starts · Ends · Signed on · Signed document version · Project · Organisation (party directory)
Can see	Management, Legal, Security, Finance, Engineering, Operations, Sales
Can change	Legal, Management
Approval	from Drafting / Counsel review → Negotiation; decide: Owner, Administrator, Management

Contract obligations

What a contract obliges us (or the other side) to do, and by when.

- Entered by a person, or proposed from the contract text and confirmed by a person
- Due soon and overdue ones appear in deadlines and attention

Statuses	**Open** › **Completed** › **Waived**
Fields	Contract · What must be done · Due date · Responsible · Repeats · Clause · Notes
Can see	Management, Legal, Finance, Operations, Sales, Procurement
Can change	Management, Legal

Entities & filings

Legal entities and filings: AGRON Inc., UAE entity.

Statuses	**Planned** › **In progress** › **Active** › **Renewal due**
Fields	Entity · Jurisdiction · Filing / licence · Due date · Document link (SharePoint)
Can see	Management, Legal, Security, Finance, Engineering, Operations, Sales
Can change	Legal, Management

Trademarks

AGRON trademark filings by office (USPTO, UAE, Madrid).

Statuses	**Planned** › **Filed** › **Published** › **Registered** › **Refused**
Fields	Mark · Office · Application number · Classes · Due date
Can see	Management, Legal, Security, Finance, Engineering, Operations, Sales
Can change	Legal, Management

Regulators

US, UAE and international authorities and their role for AGRON.

Statuses	**Reference**
Fields	Jurisdiction · Role for AGRON · Website
Can see	Management, Legal, Security, Finance, Engineering, Operations, Sales
Can change	Legal, Management

Licences & permits

Licences and permits with expiry.

- Export licences, trade licence, strategic-goods permits, type approvals
- Expiry appears in deadlines

Statuses	**Not started** › **Applied** › **Granted** › **Renewal due** › **Expired** › **Denied**
Fields	Type · Authority · Licence number · Expires · Owner · Document link (SharePoint)
Can see	Management, Legal, Security, Finance, Engineering, Operations, Sales
Can change	Legal, Management

Disputes & claims

Disputes and claims. Visible to management, legal and finance only.

Statuses	**Open** › **Negotiation** › **Litigation** › **Settled** › **Closed**
Fields	Counterparty · Amount · Currency · Forum / jurisdiction · Owner · Notes
Can see	Management, Legal, Finance
Can change	Legal, Management

Compliance calendar

Recurring filings and renewals in the US and UAE.

- Due dates appear in Upcoming deadlines
- Status Verify = confirm applicability with counsel

Statuses	**Upcoming** › **In progress** › **Done** › **Not applicable** › **Verify**
Fields	Jurisdiction · Area · Repeats · Due date · Owner · Legal basis · Notes
Can see	Management, Legal, Security, Finance, Engineering, Operations, Sales
Can change	Legal, Management

Compliance programmes & policies

Written compliance programmes: export, sanctions, anti-bribery, privacy, security, records.

- Draft with the AI desk, counsel reviews, then train the team

Statuses	**To draft** › **Drafting** › **Counsel review** › **Adopted** › **Training done**
Fields	Programme · Jurisdiction · Version · Next review · Owner · Key elements · Document link (SharePoint)
Can see	Management, Legal, Security, Finance, Engineering, Operations, Sales
Can change	Legal, Management

Board meetings

Board meetings from notice to signed minutes.

- Plan the date and agenda, send notice (template), confirm quorum
- Record resolutions and action items; attach signed minutes
- Templates: notice of meeting, minutes, written consent

Statuses	**Planned** › **Notice sent** › **Held** › **Minutes drafted** › **Minutes signed**
Fields	Meeting · Entity · Meeting date · Place / video link · Agenda · Directors present · Quorum confirmed · Resolutions adopted · Action items (who, by when) · Secretary · Document link (SharePoint)
Can see	Management, Legal, Finance
Can change	Legal, Management

Directors, officers & stockholders

Who are the directors, officers and stockholders, with shares and ownership %.

- Mark US persons (export-control access)
- Keep in line with the stock ledger and filings

Statuses	**Active** › **Former**
Fields	Role · Entity · Title (CEO, Secretary…) · Appointed / issued · Ended · Shares / units · Class · Ownership % · US person · Email / phone
Can see	Management, Legal, Finance
Can change	Legal, Management

Signing authority & powers of attorney

Who may sign what and up to which amount: delegated authority, powers of attorney, bank signatories.

- Link the approving resolution
- Expiry dates appear in reminders

Statuses	**Draft** › **Active** › **Expiring** › **Revoked**
Fields	Holder · Type · What may be signed · Limit per document · Currency · Expires · Approved by (resolution) · Document link (SharePoint)
Can see	Management, Legal, Finance
Can change	Legal, Management

Resolutions & consents

Written consents of the board and stockholders, share issuances, officer appointments.

- Attach signed copies; visible to management, legal and finance

Statuses	**Draft** › **Circulated** › **Signed** › **Filed**
Fields	Type · Entity · Date · Resolution / summary · Document link (SharePoint)
Can see	Management, Legal, Finance
Can change	Legal, Management

Software, copyright & licences

Copyrights, code ownership, open-source components and third-party SDK/API licences.

- Record the licence and its obligations before shipping code

Statuses	**Identified** › **Under review** › **Filed / approved** › **Issue found** › **Closed**
Fields	Type · Asset / component · Licence (e.g. MIT, GPL-3.0) · Obligations / restrictions · Owner · Due date
Can see	Management, Legal, Security, Finance, Engineering, Operations, Sales
Can change	Legal, Management

Data protection register

What personal data StarDome and AGRON 1 process, why, where and how long.

- One record per processing activity; impact assessment for video and audio

Statuses	**Draft** › **Assessed** › **Approved** › **Action needed**
Fields	Processing activity · Data types (video, audio, AIS, personal) · Purpose & lawful basis · Retention · Hosting location · Cross-border transfers · Impact assessment · Owner
Can see	Management, Legal, Security, Finance, Engineering, Operations, Sales
Can change	Legal, Management

Safety & environmental permits

Workshop, fire, battery, generator, environmental and laser-safety permits by site.

- Expiry dates appear in deadlines

Statuses	**Identify** › **Applied** › **Granted** › **Renewal due** › **Expired**
Fields	Permit · Site · Authority · Expires · Owner · Document link (SharePoint)
Can see	Management, Legal, Security, Finance, Engineering, Operations, Sales
Can change	Legal, Management

Legal metrics

Monthly legal numbers: contracts signed, open matters, requests answered, answer time, filings due, equipment cleared, external spend: one record per month (YYYY-MM).

- Shown as KPIs with change vs last month on the department overview
- Used in the department report

Statuses	**Draft** › **Final**
Fields	Month (YYYY-MM) · Contracts signed · Open legal matters · Legal requests answered · Average answer time, days · Filings and renewals due in 60 days · Equipment items cleared by counsel · External legal spend · Notes
Can see	Management, Legal, Security, Finance, Engineering, Operations, Sales
Can change	Legal, Management

Chapter 47

HR

HR: 12 sections. Can see: Management, HR. Can change: HR.

Team & org chart

Team directory and org chart.

- Tick US person for export-control access

Statuses	**Active** › **Onboarding** › **On leave** › **Left**
Fields	Position · Department · Reports to · Location · Type · Start date · Probation ends · Work email / phone · Paid leave days per year · Work authorization · Work authorization expires · US person (export control) · Form I-9 completed · Confidentiality & IP agreement signed · Emergency contact
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	HR

Hiring

Open positions and candidates.

- Email → Interview invitation / Job offer

Statuses	**Open** › **Interviewing** › **Offer** › **Hired** › **Closed**
Fields	Department · Location · Candidates · Owner · Notes
Can see	Management, HR
Can change	HR

Onboarding

First-week checklist.

- NDA signed and export-control briefing are required
- Email → Welcome new team member

Statuses	**To do** › **In progress** › **Done**
Fields	Person · Start date · Buddy · Confidentiality & IP agreement signed · Export-control briefing done · Notes
Can see	Management, HR
Can change	HR

Training & certificates

Courses and certificates with expiry dates.

Statuses	**Planned** › **In progress** › **Certified** › **Expired**
Fields	Person · Course / certificate · Expires
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	HR, Operations

Policies

Approved company policies. Attach the current version.

Statuses	**Draft** › **Approved** › **Retired**
Fields	Version · Document link (SharePoint)
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	HR, Legal
Approval	from Draft → Approved; decide: Owner, Administrator, Management

Time off

Request time off.

- Type and dates; HR or management approves

Statuses	**Requested** › **Approved** › **Rejected** › **Taken**
Fields	Person · Type · From · To · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Approval	from Requested → Approved (return → Rejected); decide: Owner, Administrator, Management, HR

Performance & goals

Goals and performance reviews by period.

Statuses	**Planned** › **Self-review** › **Manager review** › **Done**
Fields	Person · Period · Rating · Goals & results · Owner
Can see	Management, HR
Can change	HR

Company equipment issued

Laptops, phones and tools issued to people.

- Mark Returned when someone leaves

Statuses	**Issued** › **Returned** › **Lost**
Fields	Person · Item · Serial number · Issued · Notes
Can see	Management, HR, Engineering, Security
Can change	HR, Engineering

Candidates

Statuses	**Applied** › **Screening** › **Interview** › **Offer** › **Hired** › **Rejected**
Fields	Position · Email · Phone · Source · Next interview · Interviewers · Score (1–5) · Salary expectation · US person · CV / LinkedIn · Interview feedback
Can see	Management, HR
Can change	HR

Compensation

Statuses	**Proposed** › **Approved** › **Active** › **Superseded**
Fields	Employee · Annual base salary · Currency · Effective date · Reason · Bonus target % · Equity · Approved by · Notes
Can see	Management, HR, Finance
Can change	HR, Management
Approval	from Proposed → Approved; decide: Owner, Administrator

Offboarding

Statuses	**Planned** › **In progress** › **Done**
Fields	Employee · Last working day · Reason · Exit interview notes · Owner
Can see	Management, HR, Security
Can change	HR, Security

People metrics

Monthly people numbers: headcount, hires, leavers, open positions, time to hire, training, absence, reviews: one record per month (YYYY-MM).

- Shown as KPIs with change vs last month on the department overview
- Used in the department report

Statuses	**Draft** › **Final**
Fields	Month (YYYY-MM) · Headcount at month end · Hires · Leavers · Open positions · Average time to hire, days · Training hours · Sick and unplanned absence, days · Performance reviews done · Notes
Can see	Management, HR
Can change	HR

Chapter 48

Knowledge base

Knowledge base: 14 sections. Can see: Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement. Can change: Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement.

Tasks & reminders

Tasks and reminders for yourself or a colleague.

- Write who it is for and the date; it appears in their bell and morning digest
- Use the board to move tasks along

Statuses	**New** › **In progress** › **Blocked** › **Waiting** › **Review** › **Completed** › **Cancelled**
Fields	Assigned to · Deadline · Priority · Project · Department · Start date · Description · Completed on · Link to record or file · Milestone · Requested by (who waits for it) · Blocked by task · What blocks it · Waiting on · Waiting on (name, company) · Opportunity · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement

Portfolios and programs

Portfolios and programs that group projects (for example Product development, UAE / IDEX, Corporate).

- Management creates and edits them; a project joins one through its Portfolio field
- The Portfolio page shows each one with health, progress, overdue and blocked work and the next milestone
- A project does not need a portfolio

Statuses	**Planned** › **Active** › **On hold** › **Completed** › **Cancelled**
Fields	Owner · Priority · Start date · Target date · Description
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management

Projects

US

Statuses	**Planned** › **Active** › **On hold** › **Completed** › **Cancelled**
Fields	Project manager · Department · Priority · Start date · Target completion · Team · Portfolio / program · Deal (if for a client) · Description
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement; external: Partner
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Export control	records of this section are US persons only by default

Milestones

Statuses	**Planned** › **In progress** › **Reached** › **Missed**
Fields	Project · Date · Responsible · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement

Document register

US

Statuses	**Draft** › **In review** › **Changes requested** › **Approved** › **Effective** › **Superseded** › **Archived**
Fields	Document number · Document type · Classification · Project · Department · Document owner · Authors and contributors · Reviewer · Review by · Current version · Effective date · Next periodic review · Expires · Replaces document · Also allowed to open (Restricted) · Tags · Description
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement; external: Partner
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Approval	from Draft / In review / Changes requested → Approved (return → Draft); decide: Owner, Administrator, Management
Export control	records of this section are US persons only by default

Knowledge base

Handbook and step-by-step procedures (SOPs).

Statuses	**Draft** › **Review** › **Published** › **Superseded** › **Archived**
Fields	Article number · Category · Summary · Content · Owner · Reviewer · Language · Version · Project · Related documents (numbers) · Tags · Classification · Last reviewed · Next review · Replaces article · Topic (older articles) · Document link (SharePoint)
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement

Requests

Other requests: something a colleague or another department has to do for you.

- Choose who handles it; it is triaged, done and closed
- Everything stays visible to you until the end

Statuses	**Triage** › **In progress** › **Closed** › **Rejected** › **Cancelled**
Fields	Number · What is needed · Who handles it · Department · Amount · Currency · Due date · Project
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement

Issues

Issues: quality, delivery, technical, process, supplier or documentation problems.

- Open → investigating → action required → verification → closed
- A damaged or refused delivery opens one by itself, linked to the receipt

Statuses	**Open** › **Investigating** › **Action required** › **Verification** › **Closed** › **Cancelled**
Fields	Number · Type · Severity · Owner · Due date · What happened · Project · Vendor · Raised from · Purchase record · Build unit · Work order · Item · Serial · Lot · Disposition · Disposition by
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement

Travel & event requests

Travel and event requests.

- Approval by the department lead (and Finance above the limit)
- Book through the usual channels, then record the booking references — never card details
- Ends with the expense claim

Statuses	**Request** › **Approval** › **Planning** › **Booked** › **Ready** › **Completed** › **Expense** › **Closed** › **Rejected** › **Cancelled**
Fields	Number · Destination · Purpose · From · To · Travellers · Event · Estimated cost · Currency · Booking references (no card details) · Project
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement

Party directory

One record per organisation, whatever its relationships: vendor, client, partner, contractor.

- Vendors, clients and partners link to it (Organisation field)
- You see only the relationships you may open
- Its people get no Workspace account

Statuses	**Active** › **Inactive**
Fields	Legal name · Trading name · Organization type · Relationship with AGRON (several allowed) · Country · City · Address · Website · Email domain · Industry · Size (where entered) · Geography · AGRON owner · Source · Other names (aliases) · Tags · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Operations, Finance, Sales, Legal, Procurement

Contacts

People at customers, partners, agents and vendors.

- Each belongs to its organisation; e-mail and phone are checked for duplicates
- A contact is a business record, not a Workspace user — no account is created for them
- The timeline shows every meeting, activity and opportunity they took part in

Statuses	**New** › **Active** › **Important** › **Inactive** › **Do Not Contact**
Fields	First name · Last name · Title · Organization · Organization (as written) · Department · Role · Work email · Work phone · Mobile · Country · Time zone · Preferred language · AGRON owner · Source · Tags · Notes
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement

Meetings

Meeting notes: agenda, decisions, action items.

Statuses	**Scheduled** › **Done** › **Cancelled**
Fields	Date · Time · Time zone · Duration, min · Repeats · Repeats until · Organizer · Place · Google Meet or video link · Project · Kind of meeting · Opportunity · Organization · Main external contact · Other external attendees · Event · Participants · Agenda · Meeting notes · Decisions · Action items (free text, older meetings) · Owner
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement

Company announcements

Statuses	**Draft** › **Published** › **Archived**
Fields	Message · Priority · Audience · Departments, roles or project (when not the whole company) · Publish on · Expires · Read & acknowledge required
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management

Decision log

Log of key decisions and why they were made. Management edits.

Statuses	**Proposed** › **In review** › **Deferred** › **Approved** › **Rejected** › **Superseded**
Fields	Decision ID · Date · Area · Decision · Rationale · Made by · Project · Related document · Resulting task · Opportunity · Responsible · Due · Reconsider on (deferred) · Owner
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management
Approval	from Proposed → Approved (return → Rejected); decide: Owner, Administrator

Chapter 49

Mail center

Mail center: 2 sections. Can see: Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement. Can change: Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement.

Email templates

Branded AGRON emails.

- Pick a template, choose language, fill the fields
- Send, open in Gmail, copy formatted or save as .eml
- Save your edits as a new template

Statuses	**Draft** › **Approved**
Fields	Category · Language · Subject · Body · Button text · Button link
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement

Sent emails

Every email sent from the workspace. Open a record to see the letter.

Statuses	**Sent** › **Opened in Gmail** › **Failed**
Fields	To · Cc · Template · Sender · Related record
Can see	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement
Can change	Management, Engineering, Operations, Finance, Sales, Marketing, HR, Legal, Security, Procurement

Part 6

Roles, access and approvals

Who sees and changes what, what needs approval and which statuses are locked until a check.

01 Roles

02 Access by department

03 Approvals and gates

Chapter 50

Roles

Owner
internal

Everything, including system settings, approval limits, the sales target and the AI budget.

Administrator
internal

Users, roles and access, the system, backups.

Management
internal

Sees all departments, approves large amounts, receives escalations.

Engineering
internal

Technical department: equipment, BOM, testing, changes.

Operations
internal

Builds, purchasing, inventory, logistics, installation, service.

Finance
internal

Invoices, expenses, budget, costing, cash forecast.

Sales
internal

Leads, deals, clients, proposals, tenders, partners.

Marketing
internal

Channels, publications, campaigns, brand centre.

HR
internal

People, hiring, leave, training, policies.

Legal
internal

Contracts, compliance, licences, obligations.

Security
internal

Party screening, export control, incidents, audits.

Procurement
internal

Partner
external

Outside partner: only proposals, media and requests shared with them.

Vendor
external

Outside vendor: only their own orders and shared records.

Investor
external

Outside investor: only reports and materials shared with them.

New users have the role "Pending access" until an administrator assigns a role. Each person can be marked as a **US person** — only such people see export-controlled records.

Chapter 51

Access by department

R — can see, W — can see and change (default rules; the administrator can change them in "Roles & access").

	Owner	Administrator	Management	Engineering	Operations	Finance	Sales	Marketing	HR	Legal	Security	Procurement
Technical	W	W	R	W	R					R	R	
Operations	W	W	W	R	W	R	R	R	R	R	R	R
Finance	W	W	R			W						
Sales	W	W	W		R	R	W			R		
Marketing	W	W	R				R	W				
Security	W	W	R							R	W	
Legal & compliance	W	W	W	R	R	R	R			W	R	
HR	W	W	R						W			
Knowledge base	W	W	W	W	W	W	W	W	W	W	W	W
Mail center	W	W	W	W	W	W	W	W	W	W	W	W

Chapter 52

Approvals and status gates

Sections with approval — the "Send for approval" button in the record; the decision in "Decisions", in "My day" and by email:

Finance
Expenses & approvals
Waiting: Submitted › Approved
Returned: Rejected
Approvers: Owner, Administrator, Management, Finance

HR
Time off
Waiting: Requested › Approved
Returned: Rejected
Approvers: Owner, Administrator, Management, HR

Operations
Procurement
Waiting: Draft › Approved
Returned: Cancelled
Approvers: Owner, Administrator, Management

Technical
Engineering changes
Waiting: Requested, Assessing › Approved
Returned: Rejected
Approvers: Owner, Administrator, Management

Knowledge base
Decision log
Waiting: Proposed › Approved
Returned: Rejected
Approvers: Owner, Administrator

HR
Compensation
Waiting: Proposed › Approved
Approvers: Owner, Administrator

Finance
Budget
Waiting: Planned › Approved
Approvers: Owner, Administrator, Management

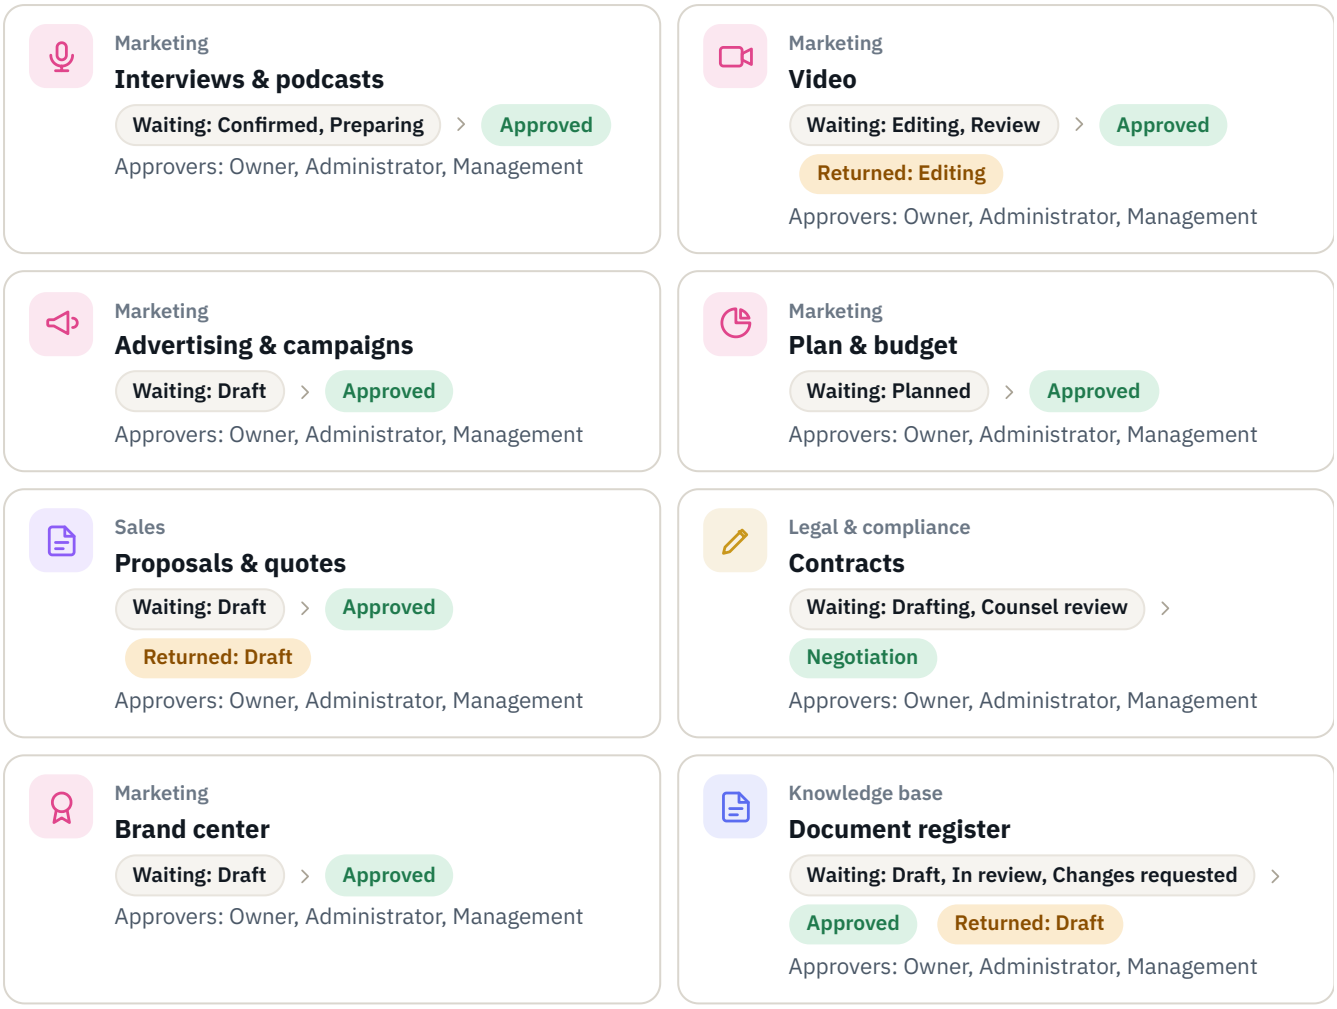

Finance
Container costing
Waiting: Draft, Reviewed › Approved
Approvers: Owner, Administrator, Management

HR
Policies
Waiting: Draft › Approved
Approvers: Owner, Administrator, Management

Marketing
Presentations & sales kit
Waiting: Draft, Review › Approved
Returned: Draft
Approvers: Owner, Administrator, Management

Marketing
Social media
Waiting: Draft, Review › Approved
Returned: Draft
Approvers: Owner, Administrator, Management

Marketing
Press & publications
Waiting: Writing, Review › Approved
Returned: Writing
Approvers: Owner, Administrator, Management

Spending limits. Expenses and purchase orders above the self-approval amount (500 USD by default) cannot become *Approved*, *Ordered* or *Paid* without an approved request: up to 5,000 USD — finance, management, administrator or owner; up to 50,000 USD — management, administrator or owner; above that — the owner. The owner changes the amounts and roles.

Status gates:

- a deal becomes *Won* only after sanctions and end-user screening is *Cleared*;
- a build goes to *Shipping* / *Installed* and a shipment to *In transit* / *Customs* / *Delivered* only with the export check *Cleared*, the deal screening *Cleared* and the end-user certificate *Signed* (or *Not required*);
- marketing publications — only after the check (AI or counsel) and approval.

Checks before approving (shown in the card): possible duplicate, above the department budget, vendor not screened or blocked, unusually large amount, discount above 15%, price below the approved costing. With a red check the button reads "Approve anyway".

Part 7

Terms and questions

The departments' glossary and answers to frequent questions.

01 Glossary

02 Frequently asked questions

Chapter 53

Glossary

Technical

BOM
Bill of materials: every part, quantity and cost of a configuration.

ICD
Interface control document: how a device exchanges data.

SDK / API
Developer kit or programming interface to control a device.

ECR / ECO
Engineering change request / order.

FAT / SAT
Factory / site acceptance test.

EMC
Electromagnetic compatibility testing.

IP rating
Protection against dust and water, e.g. IP66.

ONVIF / RTSP
Standards for IP cameras and video streams.

NMEA 0183 / 2000
Marine data standards for navigation equipment.

MQTT
Lightweight messaging protocol for sensors.

Type approval
Authority approval of a radio device model (FCC, TDRA).

Operations

Incoterms
Rules on who pays and bears risk in delivery: EXW, FCA, CIF, DAP, DDP.

HS code
Customs classification code of goods.

B/L
Bill of lading: shipping document and title to cargo.

PO
Purchase order sent to a vendor.

RFQ
Request for quotation.

NCR
Non-conformance report: a quality defect and its fix.

SLA
Service level agreement: response and repair times.

Lead time
Time from order to delivery.

Commissioning
Putting an installed system into service.

Flag state / class
Country of vessel registration / classification society.

Finance

Receivable / Payable
Money owed to us / by us.

Gross margin
(Price – cost) ÷ price.

Operating lease
Client rents the system; we keep ownership.

Finance lease
Client pays over time and ends up owning.

Runway
Months the company can operate on current cash.

Burn rate
Net cash spent per month.

Cash flow
Money in minus money out over a period.

VAT / CT
UAE value-added tax / corporate tax.

Due diligence
Investor or partner review of the company.

Sales

Pipeline
All open deals by stage.

Qualified
Lead with need, budget and decision maker confirmed.

Proposal / quote
Priced offer to a client.

RFP / tender
Formal buyer request for proposals.

End user
Who actually operates the system: must be screened.

Distributor / integrator
Partner who resells / installs and integrates.

List price
Official price before discounts.

Marketing

Lead
Potential client contact not yet qualified.

One-pager
Single-page product summary.

Deck
Presentation slides.

CTA
Call to action: the button or ask in a message.

Open / reply rate
Share of recipients who opened / replied.

Brand assets
Logos, colours, fonts and templates.

Security

US person
US citizen, permanent resident or protected individual; may access controlled data.

Deemed export
Sharing controlled technology with a foreign person inside the US counts as export.

TCP
Technology control plan: who can access controlled data and how.

Restricted-party screening
Checking names against sanctions and denied-party lists.

SDN
OFAC Specially Designated Nationals list.

Entity List
BIS list of parties needing a licence for any export.

IMO number
Unique ship identifier used for vessel screening.

MFA
Multi-factor sign-in.

Legal & compliance

EAR
US Export Administration Regulations (Commerce, BIS): dual-use items.

ITAR
US International Traffic in Arms Regulations (State, DDTC): defence articles.

ECCN
Export control classification number under the EAR, e.g. 6A003.

USML
US Munitions List: items under ITAR.

EAR99
Subject to the EAR but not on the control list; usually no licence.

Licence exception
EAR provision allowing export without a licence under conditions.

Re-export
Shipping a US-origin item from one foreign country to another.

Strategic goods (UAE)
UAE-controlled items; import, export and transit need permits.

TDRA
UAE telecom regulator; type approval for radio devices.

NDA
Non-disclosure agreement.

Governing law
Which country's law applies to a contract.

CJ (Commodity Jurisdiction)
DDTC ruling whether an item is under ITAR or the EAR.

CCATS
BIS classification ruling giving an item's ECCN.

BIS-711
Statement by ultimate consignee and purchaser for EAR exports.

DSP-83
ITAR non-transfer and use certificate.

EEI / AES
Electronic export information filed in the Automated Export System.

Importer of record
Party legally responsible for an import into a country.

Strategic-impact activity (UAE)
Licensed activity (incl. security and defence) needing special approval and limiting foreign ownership.

Red flags
Signs that an end user or end use may be unlawful; stop and check before shipping.

HR

Onboarding
First-week setup of a new team member.

Contractor
Independent worker under a services agreement.

Export-control briefing
Mandatory training on handling controlled data.

Performance review
Periodic assessment of goals and results.

Knowledge base

SOP
Standard operating procedure: a step-by-step instruction.

Action item
Task from a meeting with owner and date.

StarDome
AGRON's container-based security system.

AGRON 1
AGRON monitoring and sensor-integration software.

C20 / C40
20-ft / 40-ft container configurations.

Chapter 54

Frequently asked questions

How do I find my tasks?

Today shows your tasks first — the three most urgent at the top. For the full list open Company → Tasks → My tasks; switch to the board to drag tasks between statuses.

How do I give a task to a colleague?

- New → New task, choose the person in “Assigned to” (only active employees are listed), set the project and the deadline, Save. They get a notification at once; to reassign, choose another person.

How do I upload a new version of a document?

Open the document → Versions → Upload new version, choose the file and write what changed. The new version gets the next number (1.1, or 2.0 for a major change). Earlier versions are never replaced: they stay in the list and can still be opened. A pending approval of the previous version stops, because it was for that version.

Who gives a document its number?

Workspace, when the document is first saved, from the format an administrator set for its type, department or project (for example AGR-POL-0001). You cannot type or change a number, two documents never share one, and the number stays the same for every version.

I approved version 1.0 — is version 1.1 approved too?

No. An approval belongs to the exact version that was sent. Version 1.1 starts as a draft and needs its own approval. The document shows which version is approved, who approved it and when.

Who decides whether a document is Confidential, Restricted or US Persons Only?

The document's owner or management chooses it in the Classification field; Workspace never guesses it from the content. New documents start as Internal. This controls who can see the document inside Workspace; it is not a legal export-control determination or an ITAR certification — ask Legal when in doubt.

Why can't I attach a file in the discussion of a controlled document?

Files of Restricted and US Persons Only documents open only through the recorded download link. To add a file, upload it as a new version of the document instead; the discussion can then refer to that version.

Where do I find a procedure or how-to?

In Knowledge in the menu: search, or open a category. You see the current published article; an article that was replaced shows a link to the newer one. If something is missing, press New article — it is published after review.

Where is the list of everything we decided?

Decisions → Decision log. Decisions come from project discussions (marked Decision), meetings, approvals and management entries. Each shows the date, who made it, the project, the source, the related document or task, who is responsible and the due date — and only links you may open.

How do I make the minutes of a meeting?

Open the meeting → Generate meeting record. Workspace builds them from the agenda, attached documents, notes, decisions and action items; you can print them or save them as a file. They become the official record only when the organizer presses Approve as the meeting record; editing afterwards returns them to draft.

Where do the Assistant's answers come from?

From the records you may open, found on the server under your own access — never more than you could browse yourself. The sources are listed under the answer; every statement is marked as found, calculated, a suggestion or not available. The Assistant changes nothing until you confirm.

What does “Request changes” do?

The approver writes what must change; the record goes back (a document to Draft), the requester is notified, and after the fix they send it for approval again. The decision and the comment stay in the history.

How do I mention a colleague?

Type @ in a comment and pick the person from the list. They get a notification that opens exactly that comment. Only colleagues who may read the record are offered.

How do I reply to a message or mark it as a decision?

Under the message press Reply — the answer stays in the same thread. The project manager or management can choose Important, Decision or Announcement in the mark list; a Decision is added to the project's decision log at once and the team is told.

ⓘ Can I change or delete my message?

Yes, your own: Edit changes the text (marked “edited”), Withdraw removes the text from the discussion. The earlier text is kept in the audit history, so nothing disappears without trace.

ⓘ How do I stop e-mails at night or get one summary a day?

My profile → Notifications: turn on Quiet hours (for example 22:00–07:00 in your time zone) or set E-mail to “One daily summary”. Workspace still shows everything at once; only e-mail and phone wait. Critical announcements always come through.

ⓘ What does “Read & Acknowledged” mean on an announcement?

It records that you read this version, with the time. If management later changes the text, you are asked to acknowledge again. Management sees how many people read and acknowledged and who has not yet.

ⓘ How do I turn a meeting action item into a task?

Open the meeting, add the action item with the responsible person and deadline, Save, then press Create task. The task keeps the meeting and project; pressing again never creates a second task.

ⓘ Who can see a project discussion?

Exactly the people who may open the project. US-persons-only projects stay hidden from others, including search and notifications. Partners see a project shared with their company but never internal notes, and they are offered only the people working on it.

ⓘ Why do I not see the management dashboard?

It is for owners, administrators and management. Your own work is in Today, your projects and the task views; your manager sees the company overview.

ⓘ Someone saved the record while I was editing — what happens?

Nothing is lost. Changes to different fields are combined by themselves; for a field you both changed a window shows both versions and you pick one per field. The history keeps who changed what.

ⓘ How do I turn on two-step sign-in?

My profile → Two-step sign-in: scan the QR code with an authenticator app and enter the 6-digit code. Each sign-in then asks for a fresh code. Lost phone: an administrator resets it in Administration → People.

ⓘ How often is Workspace backed up, and where?

Every day at 09:00 UTC: all data and files, encrypted, stored outside Workspace and checked by reading them back. 14 daily, 8 weekly and 12 monthly copies are kept. Administration → System → Backup shows each copy and the last restore drill.

ⓘ An automatic email failed — will it be sent twice?

No. A failed email is retried after 1, 4, 16 and 64 minutes, then stops and appears in System → Operations with Try again. If the mail server cut off mid-send, it is marked uncertain and never resent by itself — you confirm whether it arrived.

ⓘ How do I sign a person out everywhere or close an account?

Administration → People: End sessions signs them out on every device at once; Disable closes the account, and their records stay. Owners and administrators only.

ⓘ Where is the full user guide?

In the menu and in the footer: User guide. The page describes the whole system in your interface language with diagrams, step maps and cards, and is built from the current configuration, so it always matches Workspace. The "Open PDF" button at the top opens the guide in your language; the arrow next to it lists all four languages (English, Russian, Ukrainian, Arabic) to open or download. The PDFs are rebuilt with every release.

ⓘ What do the coloured warnings above an approval mean?

Checks run before anyone decides: possible duplicate (same party and amount within 30 days), above the department budget, vendor not screened or blocked, unusually large amount (3× the usual), discount above 15% or price below the approved costing. Red means stop and look — the button changes to “Approve anyway”. They appear in Decisions and in the record while it waits for approval.

ⓘ Where do I see everything waiting for my decision?

Decisions in the menu: approvals, agent proposals, invoices ready to send and projects at risk, most urgent first, with the context and one-tap answers.

ⓘ How do I check what a delay does to cash?

Projects → What if: add “project slips by N days” or “client pays N days later” and compare the cash chart now and with the change. Nothing is saved.

Can I add an expense from a photo of a receipt?

Yes: the camera button at the top → Receipt → expense. AI reads the amount, currency and category; you check and save. Business cards become leads, delivery notes mark purchase orders received.

What happens if the connection drops?

If the app is open, keep working: records, changes, comments and photos wait on the device and are sent by themselves when the connection returns. US-persons-only records are not kept on the device.

Where is the sales forecast for the quarter?

Sales → Overview → Sales analytics: won this quarter plus open deals weighted by stage, against the target the owner sets in System → Settings. Deals without an expected close date are not counted.

What is StarDome Sprinter?

The mobile version of StarDome, built on a Mercedes-Benz Sprinter van: operator workstation, compute, power and a telescopic sensor mast. It is the sixth configuration next to the five containers — choose Sprinter in the configuration field of deals, proposals, builds, the bill of materials and costing. The proposal describes the van version, the project template StarDome Sprinter has van delivery and a 3-day handover, and builds and installed units have a Van VIN field.

Where do I see all projects and which ones are at risk?

Projects → Portfolio. Each won deal with a project has a traffic light with the reasons: late steps, overdue client invoices, low margin, missing compliance before shipping, parts short.

How is the project margin calculated?

Contract (latest proposal) plus signed change orders, against costs: purchases for the project's builds, expenses linked to the deal and supplier invoices — or the approved costing if that is higher. The target is the margin of the approved costing.

How do I add a change order?

In the won deal → Project money → New change order. Send it for approval, agree it with the client and set Signed: the amount goes into the payments by itself.

In which language do payment reminders go?

In the language set on the client card (Language for letters); English if none is set. Every reminder waits for approval and can be edited first.

How do I see who is overloaded?

Projects → Team workload: open items with a person and a date per week for 6 weeks. More than 8 in a week is marked as overloaded; press the number to see the items.

When does a milestone invoice become ready to send?

The advance is ready at once. The part before shipping becomes ready when factory acceptance (FAT) is closed, the part on acceptance when site acceptance (SAT) is closed. Finance gets a notice; a person checks the invoice and sets it to Sent.

Why can't I move a build to Shipping?

Three things are needed first: the export check of the build is Cleared, the sanctions and end-user screening of the deal is Cleared, and the end-user certificate is Signed (or Not required). The message says which one is missing.

How often is planned service due?

By the unit's service plan: Premium 24/7 every 3 months, Standard every 6, Basic every 12. When a planned-service request is resolved, the next date moves forward by itself.

How is a vendor graded?

From its purchase orders: share received by the date promised when ordering, average delay, units rejected on receipt and unit price change. A — 90%+ on time and up to 1% rejects; C — under 70% on time or over 5% rejects.

How do I get all project documents in one file?

Open the deal → Project plan → Project pack (PDF). It gathers the proposal, contracts, checks, plan, payments, acceptance, the list of files and up to 10 photos, and can also keep a copy in the deal's files.

How do I move a project step and everything after it?

Open the deal → Project plan, press the calendar button next to the step and choose the new date. Every later unfinished step moves by the same number of days; finished steps stay where they are.

How are support deadlines (SLA) calculated?

From the SLA of the linked installed unit (Premium 24/7, Standard or Basic; Standard if none is linked) and the request's severity. Leaving New counts as the response, Resolved stops the clock. The table is in Learning Center → How it works → Control.

ⓘ Why can't I mark an expense or purchase order as Approved?

The amount is above your spending limit. Send it for approval (the button in the record); once the right person approves, the status can change. The owner sets the limits in System → Settings → Approval limits.

ⓘ How do I reserve parts for a build and order what is missing?

Open the build: the Parts block compares the approved bill of materials with stock. Press Reserve from stock, then Draft orders for the shortage — purchase orders are created as drafts linked to the build.

ⓘ How do I make a commercial proposal (PDF) for a deal?

Open the deal → Commercial proposal → Make a proposal. The price comes from the price list; set quantity, discount, terms, delivery and language, check the preview and press Create proposal + PDF. It is saved in Proposals & quotes with a number and the PDF attached; send it for approval, then to the client.

ⓘ The deal is won. How do I plan the whole project?

In the deal press Unfold the project, choose the template (assembly in the USA or the UAE), the start date and the people. Workspace creates all steps with dates and owners, linked to the deal: screening, build, purchases, tests, shipping, installation, acceptance, training, final invoice and the first service.

ⓘ How does the 90-day cash forecast work?

Finance → Overview. It starts from the latest Cash in Finance → Metrics and adds, week by week, unpaid invoices by due date, approved expenses and ordered purchases. The dashed line adds open deals weighted by stage. If the certain balance goes below zero, you see the cash gap and the Finance agent warns leaders.

ⓘ Can Workspace and my Google Calendar stay in sync?

Yes, both ways: My profile → Google Calendar → Connect Google Calendar. Your client and company meetings go to your calendar; meetings in Google with a client's people come back as Meetings & calls linked to the client's deal. The owner turns the feature on once with the Google keys.

ⓘ How can a client see the status of their order?

Open the client → Client portal → Create a link and send it to the client. Without an account they see order progress, shipping with tracking, installation, proposals with PDF, invoices and installed systems, and can send a service request. You can revoke the link at any time.

ⓘ What does the client portal never show?

Internal notes, the price list and costs, draft or unapproved proposals, supplier invoices, other clients' data and any US-persons-only record. A link to a US-persons-only client cannot be created at all.

ⓘ I deleted a record by mistake. Can I get it back?

Yes, for 30 days. Open Recycle bin in the left menu and press Restore: the record comes back with its comments and files, in the same section. You need write access to that section.

ⓘ How do I get notifications on my phone?

My profile → Notifications on this device → Turn on, and allow notifications when the phone asks. On iPhone install Workspace first (Share → Add to Home Screen) and turn them on from the installed app. You get approvals, @mentions, decisions on your requests and agent news.

ⓘ How do I make a task repeat every month?

Open the record, set Repeat → Every month and save. When you complete it (Done, Filed, Paid, Closed…), the next one is created by itself with the dates moved one month forward. Works in any section with a date.

ⓘ How do I change the status or owner of many records at once?

In the Table view tick the records (the top box selects all shown), choose the status, the person or the date in the bar that appears and press Apply. You can also export only the selected records to CSV or move them to the recycle bin.

ⓘ Can I save a filter I use every day?

Yes. Set the search, the status and the sort order, press Save view and name it. It appears as a chip above the table on all your devices. The link icon copies an address that opens the same view for a colleague.

ⓘ Why does the morning digest come at a different time than my colleague's?

It comes at about 8:00 in each person's own time zone (My profile → Time zone). Without the 15-minute schedule (CRON_SECRET in GitHub) everyone gets it once a day at 11:00 UTC.

ⓘ I write in Russian. Will my colleagues in the UAE understand it?

Yes. Within seconds after saving, the title, text fields and comments are translated into English, Russian, Ukrainian and Arabic. Each colleague sees the record in their own interface language; names, codes, amounts and dates stay as written.

How do I see the original text of a translated record?

Open the record and press the chip under the title: *Translated automatically from … · Show original*. Press it again to return to the translation. The original is never replaced.

If I edit a translated record, will my language overwrite the original?

Only in the fields you change. Texts you did not touch keep their original wording; your changes are saved as you wrote them and translated again for everyone else.

In which language do system e-mails come?

In the language you chose in the top bar — it is saved in your profile. This covers the morning digest, agent notices, the Monday brief, monitoring alerts, backup and monthly reports. The owner can switch it off in System → Settings → Languages.

I added a FAQ answer in one language. Do I need to write the other three?

No. Workspace creates the other three language versions automatically and refreshes them when you change the answer. If you edit one of the versions, that version becomes the main one and the others follow it.

Why is a record still shown in the original language?

The translation is on its way (it takes a few seconds — reopen the record), the text was changed and is being translated again, the record was written by an agent and is translated on first opening, or the monthly AI budget is used up. Older records: the owner presses Translate now in System → Settings.

Where can I read how the whole system works?

Learning Center → **How it works**. Twenty-three chapters: what Workspace is, the first day, records, control (project timeline, service SLA, spending limits, parts), project money, shipping and service, projects portfolio and workload, faster decisions, from deal to service (proposals, projects, 90-day cash, Google Calendar, client portal), everyday tools (recycle bin, notifications, repeats, bulk actions), languages and automatic translation, access and US-persons-only data, approvals and status gates, smart upload and email intake, the AI assistant, automation, agents, emails and timing, reports, marketing, security and backups, owner settings, phone use and troubleshooting.

What is the difference between Suggest and Auto?

Suggest prepares the change and waits in *Waiting for approval* until an owner or admin approves it. **Auto** makes the change at once and writes it to the agent log. In both modes team notifications go out, and emails to outside addresses always wait for a person.

Can an agent send an email to a client by itself?

No. An agent can only draft it. The draft waits in the approval queue; you can read and edit it, then approve — only then it is sent. This holds in every mode.

When do agents and emails run?

Rules on save — within seconds. Agents and monitoring — every working day at 10:00 UTC. Morning digest — 11:00 UTC. Email intake — every 15 minutes. Monday brief and automatic backup — Monday. Department reports — on the 1st of the month.

Does the AI see everything in Workspace?

No. The assistant reads only what your role may read, and US-persons-only content only for confirmed US persons. Commands run with your own rights. AI never deletes, signs, pays or emails outside the company.

Does email intake change or delete letters in the inbox?

No. The inbox is read-only for Workspace: nothing is deleted, moved, marked or answered. Newsletters, auto-replies and spam are skipped; real letters become records (in Suggest mode — after your approval).

Will restoring a backup overwrite current data?

No. Restore puts back only records and comments that no longer exist. Current records stay as they are.

Why are my report numbers different from what I expect?

Reports count only records you can see and by their current status. A wrong status or a missing amount changes the result. Open the number to see the records behind it; the Data quality agent lists records with missing fields.

Where are service keys and passwords entered?

Never in Workspace. The owner stores them only in the hosting settings. System → Health shows only whether each key is set.

Can I dictate a question or a command?

Yes. In Ask AI press the microphone next to Send and speak in the interface language; the text appears in the box. Check it and press Send — in Do mode you will still see the plan and confirm it. Works in Chrome, Edge and Safari; the browser asks for microphone access the first time.

Can I tell Workspace what to do in my own words?

Yes. Open Ask AI, switch to Do and write the command, for example “move the Aurora deal to Negotiation and create a task for Ivan for Friday to send the contract”. AI shows the plan; press “Yes, do it” and the changes are made with your rights. Nothing changes until you confirm, and nothing is ever deleted.

Does AI write and send letters to clients?

It writes drafts; a person sends them. Replies to new inquiries, follow-ups on stalled deals and notes on expiring proposals appear in System → Automation → Waiting for approval. Open “Read and edit the letter”, correct it if needed and press Approve — the letter goes from info@agron1.com. Drafts use only approved Brand center texts and never include prices or technical data.

How do I put a document into Workspace by email?

Forward the letter with its attachments to info@agron1.com. The Email intake agent reads it, AI chooses the section and fills the fields, and the record appears with the files — right away in Auto mode, or after one-click approval in System → Automation in Suggest mode.

Who makes sure access is reviewed and removed on time?

The Security agent. Each quarter it prepares a “Quarterly access review” record due in 7 days; do the review in Security → Overview → Access review and mark the record Done. When someone leaves, the HR agent creates “Revoke access — name” due the same day, and if it is not Done the Security agent tells leaders every day.

What happens when a test fails?

Mark the test Failed in Technical → Testing and write the result. The Technical agent prepares a High-priority bug “Fix failed test — name” in Software with the test result in the notes and tells engineering. Only one bug per test is created.

Can a post go out without the release check?

No. A post, article, interview or video cannot be moved to Approved, Scheduled or Published until the check is “Passed (AI check)” or “Cleared by legal”. The Marketing agent also reminds the author about anything at Review without a check and sends “Legal review needed” items to Legal.

Which agents work in Workspace?

Thirteen, every working day at 10:00 UTC: Rules, Deadlines, Compliance, Data quality and the Monday brief for the whole company, plus one agent each for Finance, Sales, Operations, HR, Legal, Marketing, Technical and Security. Each department overview shows what its agent sees now. Modes and runs: Administration → System → Automation.

How are recurring legal obligations kept?

Set Frequency (Monthly, Quarterly or Annual) and the due date in Legal → Obligations. When you mark it Done, the Legal agent creates the next one with the same details and the next due date, and warns 60, 30 and 7 days before it.

What happens when an employee leaves?

Mark the person Left in HR → Team. The HR agent prepares an offboarding checklist and a Security → Access record “Revoke access — name” due the same day, lists company items still issued to the person, and tells HR and Security. Approve the proposals in System → Automation (or let the agent act on its own in Auto mode).

What happens automatically after a container is delivered?

When the shipment is marked Delivered, the Operations agent prepares an installation record for the build. When the installation is marked Commissioned, it moves the build to Installed and adds the unit to the fleet with a 12-month warranty and the first service in 6 months; the Rules agent then creates the client acceptance task. Near the service date a service ticket is prepared.

Who reminds us about stalled deals?

The Sales agent. When a deal has had no change for the number of days set in System → Settings (14 by default), it prepares a High-priority follow-up task for the deal owner, due in two days, and tells the owner. One task per deal; when the deal moves, the reminders stop.

Will Workspace remind clients to pay by itself?

It prepares the reminder, a person sends it. When a receivable invoice is 7 or more days late, the Finance agent writes a polite reminder to the email on the client card (found through the linked deal or the counterparty name) and puts it under System → Automation → Waiting for approval. Approve, and it goes from info@agron1.com. Repeats every 14 days while unpaid; after 30 days leaders are told too.

How do I let Workspace do routine work by itself?

Administration → System → Automation. Five agents run every working day: Rules, Deadlines, Compliance, Data quality and the Monday brief. Start in Suggest mode: agents prepare changes and you approve them in one click under Waiting for approval. When a rule or agent has proved itself for a couple of weeks, switch it to Auto.

Can an agent send an email to a client or pay something by itself?

No. Emails to outside addresses always wait for a person's approval, and agents never pay, sign or publish. Only team notifications inside the company go out automatically. Records marked US persons only are announced only to US persons, and their proposals can be approved only by a US person.

How do I create my own rule?

System → Automation → Rules → New rule. Choose when (a status changes, a record is added or a date comes), the section, optional conditions, then actions: notify people, create a linked record, change a field or email an outside address. Use {title}, {client} and other fields in the text. Save and keep it in Suggest mode first.

What happens automatically when a deal is won?

With the ready-made rules: a container build (linked to the deal) and a draft receivable invoice with the client, amount and currency are prepared, and Operations and Finance are notified. Earlier stages also help: at Proposal a sanctions screening is prepared, at Negotiation a contract draft record.

What is the Monday brief?

Every Monday the CEO gets one email: open pipeline, deals won, new leads, receivables and overdue invoices, overdue items by department, builds, support tickets, screenings, approvals and proposals waiting, monitoring and data quality — plus five AI conclusions if the AI budget allows. Recipients are set in System → Settings. US-persons-only records are not included.

How do I see everything automation changed?

System → Data quality & audit → Audit trail → Automation only. Each line shows the record, what was done and why; the Agent log on the Automation tab adds runs and errors. Download CSV for a full copy.

How do I sign in?

Enter your work email on the sign-in page and type the 6-digit code from the email, or press Continue with Google. No password is needed. If nothing arrives in a minute, check Spam. An administrator activates new accounts.

Why don't I see some departments?

Your role decides which sections you see. Ask the owner or an administrator to change your role or access in Users & roles.

Why can't I mark a deal as Won?

Sanctions and end-user screening must be Cleared first. Set the screening field to Cleared after the check in Security → Restricted-party screening.

Why can't a container move to Shipping?

The export and end-user check must be Cleared before shipping. Update the Export check field once Legal confirms.

What does Controlled mean?

The record contains technical data under US export control. Only users marked US person can see it; the database enforces this.

How does a post or article get published?

1. Create it in Social media, Press, Interviews or Video. 2) Click the AI button to write the draft and edit it. 3) Click “Compliance check”: it must pass, or legal sets “Cleared by legal”. 4) Send for approval: management approves by email in one click. 5) Publish, then paste the link and the reach. Dates appear in the Marketing calendar and on your phone.

How do I switch between light and dark theme?

Press the sun/moon button at the top right (or Dark theme at the bottom of the page). The whole Workspace, including the side menu, switches. By default it follows your device setting.

Where do I find the AGRON and StarDome logos?

Marketing → Brand center → Logos. Each logo has a preview, where to use it and a PNG download. The AGRON™ logo is the only company logo: keep the ™ mark; it looks best on dark backgrounds.

How does the department menu work?

Click a department under the orange Departments caption: it moves to the top of the menu and opens its sections, starting with Overview. Only one department is open at a time, so the menu stays short.

How do I plan social posts with AI?

Marketing → Overview → Plan 4 weeks of posts → Suggest posts. AI proposes 8 posts with dates, channels and topics, using upcoming events and publications. Tick the ones you want: they appear in Social media as Ideas and in the Marketing calendar.

How do I connect our social accounts?

Open Marketing → Channels & accounts, open the card of the platform and paste the profile link and the analytics page. Then the Open and Analytics buttons work from the Marketing overview. Statistics arrive by hand, by CSV import or, for YouTube, from the API. Passwords are never stored in Workspace: note only who has admin access.

How do I import statistics from LinkedIn, Meta, X or YouTube?

In the platform, export analytics as CSV for the period (hover Import CSV on the card to see where). On the channel card press Import CSV and choose the file: Workspace finds the date and the known columns, adds them up by month and shows a preview; press Save. Existing months are updated, not duplicated.

How do I turn on automatic YouTube statistics?

Free: in Google Cloud Console create a project, enable YouTube Data API v3 and create an API key. The owner adds it in Vercel as YOUTUBE_API_KEY and redeploys. Put the channel ID (UC...) or @handle in the YouTube card; the Update from YouTube button then refreshes subscribers, views and videos.

How does the system check work?

Technical → Overview → Check now. Our server opens the health link of each system (or its main link) over https, with a 7-second limit, and saves the result: Operational, Degraded (slow or error) or Down, with response time and time of check. Private and internal addresses are never opened.

How do I make a marketing or technical report?

Open the department Overview and press Report. Choose the period, press AI summary for conclusions and next steps, then PDF, Print, Copy or Download. Numbers come only from Workspace statistics and records.

How do I check our domains for email spoofing and HTTPS problems?

Security → Overview → Domain and website security → Scan. Green = fine, amber = improve, red = fix now. Typical fixes: add an SPF record, set DMARC to quarantine or reject, turn on DKIM in Google Admin, renew the certificate. Add risk creates a Cybersecurity record with the finding.

How do I screen a client, vessel or vendor?

Security → Restricted-party screening → New: party name, type, country (two letters, e.g. AE) and IMO for vessels. Press Screen now: the US Consolidated Screening List is searched (when CSL_API_KEY is set) and each possible match is shown. OFAC, EU, UN, Equasis and MarineTraffic open in one click. Put the result into the record, review it, then set Cleared, Flagged or Escalated.

How do I turn on automatic sanctions screening?

Free: register at developer.trade.gov, subscribe to the Consolidated Screening List API and copy the subscription key. The owner adds it in Vercel as CSL_API_KEY and redeploys. Without the key the official search sites still open from every screening record.

How do I review who has access to Workspace?

Owners and administrators: Security → Overview → Workspace access review → Load accounts. Check the notes (never signed in, inactive 60+ days, external, waiting for a role), change roles in Users & roles, then press Record the review. Do it every quarter.

How do I track a shipment?

In Operations → Logistics, fill in Carrier and the tracking, container or AWB number. A Track button appears in the record and opens the carrier's tracking page (Maersk, Hapag-Lloyd, DHL, FedEx, UPS, Aramex).

Where are exchange rates and the currency converter?

Finance → Overview → Exchange rates and converter. EUR and GBP come from the European Central Bank daily; AED is fixed at 3.6725 per USD. Type an amount and currency to see it in the others.

Does Workspace make backups?

Yes. Every Monday all data is saved in a private store (last 8 copies). The free database plan has no backups of its own, so this matters. To also receive an encrypted copy by email, the owner adds a long backup password in Vercel as BACKUP_PASSPHRASE. Attached files stay in storage; a full local copy with files is made in Administration → System.

How do I save a backup to my computer?

Owner: Administration → System → Local copy → tick Include attached files, type a password if you want the file encrypted, press Download the copy. You get one file: AGRON_Workspace_backup_.zip or .agronbackup (encrypted). Keep the password separately.

How do I restore deleted records from a backup?

Owner: Administration → System → Open or restore a backup → choose the file (enter its password if encrypted). You see what is inside by department. Restore missing records adds back only records and comments that no longer exist; existing records are never changed.

Who gets monitoring alerts and monthly reports?

Monitoring runs every day at 10:00 UTC; owners, administrators and the security role get an email only when a system is down or slow, a certificate expires within 30 days or email protection breaks. On the 1st, owners, administrators and management get one email with every department's report for the past month, without export-controlled records.

Who can see that someone opened controlled data?

Every time a record marked US persons only, or one of its files, is opened, Workspace writes who, what and when. Owners, administrators, management and the security role see the log on Security → Overview. Keep it for audits of the technology control plan.

How do I link a build to its deal and see the whole chain?

Open the build, in Deal (linked) type part of the deal name and pick it; do the same for Screening (linked). Save. The Linked records panel then shows the client, deal, screening, proposal, contract, invoices, shipments, installation, unit and support tickets connected to it.

How do I send a presentation to a client?

Open Marketing → Presentations & sales kit, open the item and click Email. Or in any email click “Add files from Media library”. Links stay valid for 7 days.

How do I invite a partner or vendor?

Administration → Users & roles → Invite: enter the email, role Partner or Vendor, and their company name. They will see only records shared with that company.

How do I share a record with a partner?

In the record set External visibility to the partner's company name, or * for all partners, vendors and investors.

Does the AI give legal advice?

No. Legal, export and tax answers are preliminary and marked so. Final decisions are made by counsel.

How is AI cost controlled?

One company API key, a monthly limit per user, Quick mode by default, cached instructions, and reuse of saved answers: repeated questions are answered from the FAQ for free.

Where are files stored and how big can they be?

In the company's private Supabase storage, up to 50 MB per file. Access follows the record: if you can't see the record, you can't open its files.

Can I store ITAR technical data here?

No. This workspace runs on commercial cloud. ITAR data needs a separate compliant environment agreed with export counsel.

Why is my project at Risk?

Open the project → Advisor. The level comes from a score of 0–100; every point taken off has a named reason (for example 3 overdue tasks, a milestone due in 5 days, approvals waiting more than 3 days), and each reason opens its records. Fix the reasons and the level goes back up — nothing is judged by hand or by AI.

Can a project I cannot open change the numbers I see?

No. Every count, health level, reason, report, alert and Assistant answer is calculated from the records you may open. A US-persons-only or Restricted project you cannot open is not counted anywhere you look — not even as “1 hidden project”.

How do I show that I am waiting for a supplier?

Set the task to Waiting and choose who you wait for (Supplier, Partner, Client, Contractor, Authority) with their name in “Waiting for”. It then appears under Waiting for an outside party with how long it has waited. For a colleague, simply assign the task to them — it appears under Waiting for others.

What does Escalate do?

It notifies the project manager (or the department head of the person you wait for) and the person, and records the escalation in the history. The item is then marked Escalated. Once a day at most; nothing in the task itself is changed.

Does the workload report measure how productive people are?

No. It shows counts only — active, overdue and blocked tasks, projects and upcoming deadlines — so that work can be balanced. Task counts are not a measure of anyone's performance, and availability in Team status is what each person sets; presence is never tracked.

Will a voice command change something without asking me?

No. Showing and searching open at once; every change (a task, a new due date, an assignment, completing a task) is shown first and done only after you press Yes. If the words are unclear — "Move the deadline." — Workspace asks which task and which date. Approvals, access, deletions and outside e-mails are never done by voice. Every proposal and result is recorded, and Undo is offered where the change can be reversed exactly.

Why can't I undo every action?

Undo is offered only where it is exact: removing a task the action created, or putting back the fields it changed — and only if nobody changed the record since. A posted comment, a sent notification or a record someone has edited cannot be silently taken back, so there is no Undo for them.

How do I prepare the weekly management review?

Executive control → Reports & review → Prepare the Weekly Management Review. Workspace assembles the nine sections from the records you may open, each line linked to its record; copy, download or print it. After the meeting press Mark this review as held — "What changed since last review" then counts from that moment. The Assistant can do the same: "Prepare my management review".

How do I raise a purchase request?

Company → Requests & processes → New request → Purchase. Write what is needed, the quantity, the estimated amount and the project, and press Submit request. You then see each step — technical review, quotations, vendor selection, approval, order, delivery, receiving — with who has it and by when.

Why was my approval cancelled after the price changed?

An approval is given to the exact values it was asked for: amount, currency, vendor, quantity, or the exact version of a contract document. When one of them changes, the earlier approval no longer applies, it is marked as such in the history, and the approval step starts again on the new values. Nothing already ordered is duplicated: if a purchase record exists, a person is asked to amend the order.

Does Workspace pay invoices or send orders to vendors?

No. Workspace moves no money, signs nothing and sends nothing outside by itself. Finance pays in the bank and records the payment (date, amount, bank reference); a person places the order with the vendor and completes the step. Bank details, card numbers and passwords are refused if someone tries to enter them.

Who approves a purchase?

The approval rules decide by amount, using roles and leads — never named people: by default up to 5,000 the requester's department lead, up to 25,000 also Finance, above that also Management. Owners and administrators can change the rules; every change is kept. The requester never approves their own request, and one person cannot approve two levels of the same request.

Can Workspace tell me which quotation is best?

No. It shows the quotations side by side and marks facts — the lowest price in each currency, the shortest lead time, expired validity, the vendor's status. The person choosing writes why; the reason and the alternatives are kept with the request, and the choice still goes to approval.

What happens when goods arrive damaged?

Record receiving on the purchase record with the units refused and the condition. Workspace keeps the receipt, counts only accepted units as received, opens an issue linked to the receipt with its own process, and gives you a task to agree a replacement, credit or return with the vendor. It does not contact the vendor itself.

Can values read from a document go straight into a record?

No. Reading a quotation, an invoice or a contract's obligations only makes proposals, each with the line it was read from. A model is used only when one is configured and the record is not US-persons-only, and a value is kept only if its quoted line is really in the document. A person confirms or corrects each proposal before it becomes a record; the confirmation is recorded.

Can I change a process?

Owners, administrators and management can, in Requests & processes → Process builder: make a new version, edit its steps, Validate and Publish. A published version never changes, and processes already running keep the version they started on unless an owner or administrator moves one explicitly. Conditions are chosen from fields and operators; no code can be added.

How do I capture a lead at IDEX on my phone?

Company → Commercial → Event mode → Capture. Type the name, organisation, phone or e-mail, interest, importance and the follow-up date, and press Save lead — it takes a few seconds. You can also paste the card text or the QR code content (vCard), or take a photo of the card: the fields are only proposed, you check them, and nothing is saved until you press Save. Possible duplicates are shown at once.

What happens when I convert a lead?

In one step Workspace creates — or reuses — the organisation, the contact and a new opportunity, links them and marks the lead Converted. If a similar organisation or contact already exists you choose it, or confirm a new one and say why; nothing is merged automatically. If anything fails, nothing is created. An introduction recorded on the lead travels to the opportunity.

Is the weighted pipeline our revenue forecast?

No. Weighted pipeline is value × probability — a management estimate to compare opportunities, not revenue. Probability is the owner's manual estimate or the stage default from Commercial → Settings. Each currency is shown on its own; nothing is converted without an authorised rate.

Why does an opportunity show Stalled or Risk?

Health is computed from facts and every reason is shown: no next action, an overdue follow-up, no interaction for the set number of days, a proposal without response, a passed decision date, too long in one stage. The periods are set in Commercial → Settings. Health says what needs action; it is not the probability of winning.

Who approves a commercial proposal?

The PROPOSAL approval policy decides, by authority, never by named people: a holder of the Proposal approver authority, and above the value or discount threshold also a Pricing approver. The author cannot approve their own proposal. The thresholds that came with the system are marked UNAPPROVED DEFAULT CONFIGURATION until the Owner approves them as AGRON policy.

Can a partner or agent see our opportunities?

No. A partner or agent relationship gives that organisation no access to any opportunity, and a vendor never sees the customer pipeline. Sharing is a separate, explicit step. Agents sign in with the partner role of their own company.

What happens when an opportunity is Won?

Moving to Won needs the decision evidence (for example the customer's order) and the final value. Nothing is created by itself: Prepare handoff package shows what the delivery team receives, and only Create project makes the project. Contracts and payments still follow their own approvals.

What can I ask the Assistant about sales?

For example: “Who do I need to follow up with today?”, “Which opportunities need my attention?”, “Which proposals are waiting for a response?”, “What opportunities do we have in the UAE?”, “What came from IDEX?”, “Who introduced us to Harbor Marine?”, “Prepare the commercial review”. Each answer lists the records it comes from — only those you may open. The Assistant can draft a follow-up message as text, but never sends it.

How do I start a build unit?

Manufacturing → Build units → New build unit: choose the product and an approved configuration and confirm. Workspace gives the next unit number of the product (for example AGR-C40-0005) and pins the configuration and the BOM revision that applies. Then generate the work orders from the routing on the unit's Overview. Creating units needs the Build Manager capability.

Can an approved BOM be corrected?

Not in place. An approved revision never changes — for anyone, administrators included. Make a new revision with a reason (Manufacturing → BOMs → New revision), edit it, and submit it for approval. Its effectivity decides which units get it; units already released keep their revision until an Engineering Change Approver decides Incorporate for them.

Does a material shortage create a purchase order?

No. A shortage only shows the numbers: required, used, allocated, free stock offered and ordered. On the unit's Materials tab you can raise a purchase request for the missing quantity; it is a normal request that goes through the purchase process and its approvals. Received goods go into Inspection first, not straight to Available.

ⓘ How do I record work on the shop floor from my phone?

Open Shop floor (/build). My work lists the work orders assigned to you; scan a label or type its code to open one. Press Start, follow the pinned instruction and checklist, enter what you used, tick the serials you installed, add photos, and press Complete — each step is confirmed before it is saved. Report an issue from the same screen if something is wrong.

ⓘ Who can accept a unit and release a shipment?

Only people given the Unit Acceptance Approver or the Shipment Release Approver capability — never by role alone, and a System Administrator gets no such authority automatically. Acceptance needs the readiness checks to pass (required inspections and approved tests, no open blocking issue, a current As-Built); it is internal acceptance, not an external certification. Workspace never books a carrier.

ⓘ What is As-Built and how is it different from the BOM?

The BOM says what should go into a unit; As-Built records what actually did — from the installation, consumption, software, work, inspection and test records, with serials and lots. Each As-Built revision is kept with its hash. The As-Built tab compares the approved BOM with what was built line by line: missing, extra, substituted (only an approved alternate) and quantity differences.

ⓘ Is the build cost our accounting cost?

No. It is an operational build cost: planned (required × reference cost), committed and received from the unit's purchase records, consumed and installed, rework and approved expenses. There is no payroll burden, depreciation or tax, and currencies are never added together. Only the roles and capabilities named in Manufacturing → Settings see costs.

ⓘ What can I ask the Assistant about manufacturing?

For example: “What are we building?”, “What is the status of C20-0001?”, “What is blocking the C40?”, “What materials are missing?”, “What has not arrived?”, “What inspections failed?”, “What changed from BOM AGR-BOM-0001 revision A to B?”, “Which serial number is installed?”, “Is this unit ready for acceptance?”, “What are the major manufacturing risks this week?”. Each answer lists the records it comes from — only those you may open. The Assistant may propose a purchase request, rework, an inspection or a test; you confirm it on the unit's screen. It never orders, approves engineering or accepts a unit.

Appendix

Launch checklist

What the owner does once at launch (technical details are with the administrator):

1. **Keys of outside services** are entered in the hosting settings by the owner himself: backup encryption, sanctions lists, YouTube, GitHub, Google Calendar. Secrets are never sent in chat or by email.
2. **The secret for the 15-minute jobs** — in the code repository settings. After that mail intake, translations, the local morning digest, the calendar and SLA alerts work.
3. **Database update** (the next SQL script) — run in the database console.
4. **Social links** — in "Marketing" → "Channels".
5. **Live checks**: phone notifications, translation, proposal, project, client portal, photo → record, working without a connection.
6. **"Translate now"** in "System" → "Settings" — translation of existing records into four languages.
7. **Quarterly sales target**, **approval limits**, **working days and holidays** — in "System" → "Settings".
8. **Make the code repository private** and delete temporary branches.

If something is wrong

Start with the chapter "When something does not work". Page errors are recorded for administrators automatically; "System" → "Health" shows whether the database, sign-in, email and AI work.
